

Oris accounting Web API

It is necessary to [\[LogIn\]](#) to the system first of all and get token. Token is passed to all methods of web API as a parameter. In case testing ask the company "Oris" to provide you with the [\[LogIn\]](#) parameters. Otherwise ask server IT administrator.

Method list

Accounting

- .. Chart of accounts
 - [\[Account\]](#) *Adds, Updates or Deletes* account.
 - [\[AccountsList\]](#) *Gets list of accounts.*
 - [\[GetDebitorCreditorAccountByParent\]](#) *Gets or Adds debtor/creditor account.*
 - [\[GetItemAccountByParent\]](#) *Gets or Adds Item account.*
 - [\[GetProgenyOA_AccountsIDs\]](#) *Gets all sub accounts IDs for parent account.*
- .. Entries
 - [\[Transaction\]](#) *Adds, Updates or Deletes* accounting transaction.
 - [\[GetTransactionByID\]](#) *Gets one accounting transaction and its entries.*
 - [\[EntriesList\]](#) *Gets list of accounting entries.*
 - [\[TransactionSetTaxDocument\]](#) *Sets revenue service Tax Document number for the transaction.*
 - [\[TransactionSetVAT\]](#) *Sets revenue service VAT number for the transaction.*
 - [\[TransactionSetWaybill\]](#) *Sets revenue service Way bill number for the transaction.*
- .. Start balance
 - [\[SetStartBalance\]](#) *Sets account start balance.*
 - [\[StartBalancesGetStartDate\]](#) *Gets start balance date.*
 - [\[StartBalancesSetStartDate\]](#) *Sets start balance date.*
 - [\[StartBalancesList\]](#) *Gets start balances list of accounts.*
- .. Managerial transactions
 - Bank transfers
 - [\[BankTransfer\]](#) *Adds, Updates or Deletes* bank transfer.
 - [\[GetBankTransferByID\]](#) *Gets one bank transfer and its accounting entries.*
 - [\[BankTransfersList\]](#) *Gets list of bank transfer.*
 - Bank transfers (foreign currency)
 - [\[BankTransferForeign\]](#) *Adds, Updates or Deletes* bank transfer foreign.
 - [\[GetBankTransferForeignByID\]](#) *Gets Bank Transfer Foreign and its accounting entries.*
 - [\[BankTransferForeignsList\]](#) *Gets list of bank transfer foreign.*
- Cash income orders
 - [\[CashIncomeOrder\]](#) *Adds, Updates or Deletes* cash income order.
 - [\[GetCashIncomeOrderByID\]](#) *Gets one cash income order and its accounting entries.*
 - [\[CashIncomeOrdersList\]](#) *Gets list of cash income order.*
- Cash outlay orders
 - [\[CashoutlayOrder\]](#) *Adds, Updates or Deletes* cash outlay order.
 - [\[GetCashoutlayOrderByID\]](#) *Gets one cash outlay order and its accounting entries.*
 - [\[CashoutlayOrdersList\]](#) *Gets list of cash outlay order.*
- .. Results
 - [\[BalancesList\]](#) *Gets balances by chart of accounts.*
 - [\[TurnoverList\]](#) *Gets turnover by chart of accounts.*
 - [\[AccountBalancesList\]](#) *Gets all balances for one account.*
 - [\[AccountStatementList\]](#) *Gets account statement.*
 - [\[AccountStatementDetailedList\]](#) *Gets account statement detailed.*

- ... [JournalOrderList] [Gets account journal order.](#)
- ... [CashflowsList] [Gets cashflow.](#)
- ... [MemorialList] [Gets memorial.](#)
- ... [DebitorCreditorBalancesList] [Gets debitor/creditor balances.](#)
- ... [DebitorCreditorTurnoverList] [Gets debitor/creditor turnover.](#)
- ... [TrialBalanceList] [Gets trial balance.](#)
- ... [ProfitAndLossList] [Gets profit and loss.](#)
- ... [TransactionsList] [Gets list of transactions.](#)
- ... [DualEntriesList] [Gets list of entries in dual entries style.](#)

Managerial accounting

- .. Proforma invoices
 - ... [ProformaInvoice] [Adds, Updates or Deletes](#) proforma invoice.
 - ... [GetProformaInvoiceByID] [Gets proforma invoice and its item list.](#)
 - ... [ProformaInvoicesList] [Gets list of proforma invoices.](#)
- .. Accept operations
 - ... [AcceptOperation] [Adds, Updates or Deletes](#) accept operation.
 - ... [GetAcceptOperationByID] [Gets accept operation and its item and expencis list.](#)
 - ... [AcceptOperationsList] [Gets list of accept operation.](#)
- .. Transfer operations
 - ... [TransferOperation] [Adds, Updates or Deletes](#) transfer operation.
 - ... [GetTransferOperationByID] [Gets transfer operation and its item list.](#)
 - ... [TransferOperationsList] [Gets list of transfer operation.](#)
- .. Supply operations
 - ... [SupplyOperation] [Adds, Updates or Deletes](#) supply operation.
 - ... [GetSupplyOperationByID] [Gets supply operation and its item list.](#)
 - ... [SupplyOperationsList] [Gets list of supply operation.](#)
- .. Write off operations
 - ... [WriteOffOperation] [Adds, Updates or Deletes](#) writeOff operation.
 - ... [GetWriteOffOperationByID] [Gets writeOff operation and its item list.](#)
 - ... [WriteOffOperationsList] [Gets list of writeOff operation.](#)
- .. Return to supplier operations
 - ... [ReturnToSupplierOperation] [Adds, Updates or Deletes](#) return to supplier operation.
 - ... [GetReturnToSupplierOperationByID] [Gets return to supplier operation and its item list.](#)
 - ... [ReturnToSupplierOperationsList] [Gets list of return to supplier operation.](#)
- .. Return from customer operations
 - ... [ReturnFromCustomer] [Adds, Updates or Deletes](#) return from customer operation.
 - ... [GetReturnFromCustomerByID] [Gets return from customer operation and its item list.](#)
 - ... [ReturnFromCustomersList] [Gets list of return from customer operation.](#)
- .. Inventory
 - ... [Inventory] [Adds, Updates or Deletes](#) inventory operation.
 - ... [GetInventoryByID] [Gets inventory operation and its item list.](#)
 - ... [InventoriesList] [Gets list of inventory operation.](#)
- .. Orders to suppliers
 - ... [OrderToSupplier] [Adds, Updates or Deletes](#) order to supplier operation.
 - ... [GetOrderToSupplierByID] [Gets order to supplier operation and its item list.](#)
 - ... [OrderToSuppliersList] [Gets list of order to supplier operation.](#)
- .. Transfer Orders
 - ... [OrderOfTransfer] [Adds, Updates or Deletes](#) order of transfer operation.
 - ... [GetOrderOfTransferByID] [Gets order of transfer operation and its item list.](#)
 - ... [OrderOfTransfersList] [Gets list of order of transfer operation.](#)
- .. Orders from buyers
 - ... [OrderFromByuer] [Adds, Updates or Deletes](#) order from buyer operation.
 - ... [GetOrderFromByuerByID] [Gets order from buyer operation and its item list.](#)
 - ... [OrderFromByuersList] [Gets list of order from buyer operation.](#)
- .. Results
 - ... [GetItemsBalancesList] [Gets items balances list.](#)

- ... [GetItemsItemsTurnoversList] [Gets items turnover list.](#)
- ... [GetItemsItemsTurnoverByPeriodList] [Gets items turnover by period list.](#)

Salary

- ... [Employee] [Adds, Updates](#) or [Deletes](#) employee.
- ... [EmployeesList] [Gets list of employee.](#)
- ... [EmployeeDepartment] [Adds, Updates](#) or [Deletes](#) employee department.
- ... [EmployeeDepartmentsList] [Gets list of employee departments.](#)
- ... [EmployeePositionsList] [Gets list of employee positions.](#)
- ... [GetDataTableEmployeeMonthAccrueds] [Gets list of month accrued.](#)
- ... [GetDataTableEmployeeResults] [Gets list of.](#)
- ... [GetDataTableEmployeeYearAccrueds] [Gets list of.](#)
- ... [GetDataTableReportNumbers] [Gets list of.](#)
- ... [GetDataTableReportResult] [Gets list of.](#)
- ... [GetEmployeeDepartmentByID] [Gets one employee department and its related positions list.](#)
- .. Archive
- ... [GetDataTableSalaryResultArchive] [Gets salary results list.](#)
- ... [GetDataTableSalaryAccruedsArchives] [Gets salary accrued list.](#)

Fixed assets

- ... [FixedAsset] [Adds, Updates](#) or [Deletes](#) fixed asset.
- ... [GetFixedAssetsList] [Gets list of fixed assets.](#)
- ... [GetFixedAssetsStatementsList] [Gets list of fixed asset statement.](#)
- ... [GetFixedAssetsStatementsDetailedList] [Gets list of fixed asset statement detailed.](#)

Manufacturing

- ... [ManufacturingDesign] [Adds, Updates](#) or [Deletes](#) manufacturing design.
- ... [GetManufacturingDesignByID] [Gets one manufacturing design and its related materials list.](#)
- ... [ManufacturingDesignsList] [Gets list of manufacturing design.](#)
- ... [CostDriver] [Adds, Updates](#) or [Deletes](#) cost driver.
- ... [GetCostDriverByID] [Gets one cost driver and its related products list.](#)
- ... [CostDriversList] [Gets list of cost driver.](#)
- ... [ManufacturingPlanning] [Adds, Updates](#) or [Deletes](#) manufacturing planning.
- ... [GetManufacturingPlanningByID] [Gets one manufacturing planning and its related materials list.](#)
- ... [ManufacturingPlanningsList] [Gets list of manufacturing planning.](#)
- ... [ManufacturingExecution] [Adds, Updates](#) or [Deletes](#) manufacturing execution.
- ... [GetManufacturingExecutionByID] [Gets one manufacturing execution and its related materials list.](#)
- ... [ManufacturingExecutionsList] [Gets list of manufacturing execution.](#)

Related tables

- .. Debitor/Creditor (organization or person)
- ... [DebitorCreditor] [Adds, Updates](#) or [Deletes](#) debitor/creditor.
- ... [GetDebitorCreditorByID] [Gets one debitor/creditor and its bank accounts, addresses, phones and legal identifiers lists.](#)
- ... [DebitorCreditorsList] [Gets list of debitor/creditors.](#)
- .. Organization
- ... [Organization] [Adds, Updates](#) or [Deletes](#) organization.
- ... [GetOrganizationByID] [Gets one organization and its bank accounts, addresses and phones lists.](#)
- ... [OrganizationsList] [Gets list of organizations.](#)
- .. Person
- ... [Person] [Adds, Updates](#) or [Deletes](#) person.

. **[GetPersonByID]** [Gets one person and its bank accounts, addresses, phones and legal identifiers lists.](#)
 **[PersonsList]** [Gets list of persons.](#)
 .. Item (commodity, fixed asset or service)
 **[Item]** [Adds, Updates or Deletes](#) item (commodity).
 **[GetItemByID]** [Gets one item \(commodity\) and its related units list.](#)
 **[ItemsList]** [Gets list of items \(commodity, fixed asset or service\).](#)
 **[Service]** [Adds, Updates or Deletes](#) item (Service).
 **[ServicesList]** [Gets list of services.](#)
 .. Stock unit
 **[StockUnit]** [Adds, Updates or Deletes](#) stock unit.
 **[StockUnitsList]** [Gets list of stock units.](#)
 .. Currency
 **[Currency]** [Adds, Updates or Deletes](#) currency.
 **[CurrenciesList]** [Gets list of currencies and rates for a specified date.](#)
 .. Currency rate
 **[CurrencyRate]** [Adds, Updates or Deletes](#) currency rate.
 **[CurrencyRatesList]** [Gets list of currencies and rates for a specified period.](#)
 .. Cost centre
 **[CostCentre]** [Adds, Updates or Deletes](#) cost centre.
 **[CostCentresList]** [Gets list of cost centres.](#)
 .. Cost unit
 **[CostUnit]** [Adds, Updates or Deletes](#) cost unit.
 **[CostUnitsList]** [Gets list of cost units.](#)
 .. Comment
 **[Comment]** [Adds, Updates or Deletes](#) comment.
 **[CommentsList]** [Gets list of comments.](#)
 .. Transaction type
 **[TransactionType]** [Adds or Updates](#) transaction type.
 **[TransactionTypesList]** [Gets list of transaction types.](#)
 .. Transactions link
 **[TransactionLink]** [Adds, Updates or Deletes](#) transaction link.
 **[GetTransactionLinkByID]** [Gets list of related and depended IDs for a single transaction.](#)
 .. Manufacturer
 **[Manufacturer]** [Adds, Updates or Deletes](#) manufacturer.
 **[ManufacturersList]** [Gets list of manufacturers.](#)
 .. City
 **[City]** [Adds, Updates or Deletes](#) city.
 **[CitiesList]** [Gets list of cities.](#)
 .. Country
 **[Country]** [Adds, Updates or Deletes](#) country.
 **[CountriesList]** [Gets list of countries.](#)
 .. Bank
 **[Bank]** [Adds, Updates or Deletes](#) bank.
 **[BanksList]** [Gets list of banks.](#)
 .. Vehicle
 **[Vehicle]** [Adds, Updates or Deletes](#) vehicle.
 **[VehiclesList]** [Gets list of Vehiclevs.](#)
 .. Sale price type
 **[SalePriceType]** [Adds, Updates or Deletes](#) sale price type.
 **[SalePriceTypesList]** [Gets list of sale price types.](#)
 .. Status
 **[Status]** [Adds, Updates or Deletes](#) status.
 **[StatusesList]** [Gets list of status.](#)

Additional tables

.. Debitor/Creditor

- ... **[DebitorCredtorGroup]** Adds, Updates or Deletes debitor/credtor group.
- ... **[DebitorCredtorGroupsList]** Gets list of debitor/credtor groups.
- .. Item
 - ... **[ItemGroup]** Adds, Updates or Deletes item group.
 - ... **[ItemGroupsList]** Gets list of item groups.
- .. Cost centre
 - ... **[CostCentreGroup]** Adds, Updates or Deletes cost centre group.
 - ... **[CostCentreGroupsList]** Gets list of cost centre groups.
- .. Bank transfer
 - ... **[BankTransferTaxDepartCodes]** Adds, Updates or Deletes tax department code.
 - ... **[BankTransfersTaxDepartCodesList]** Gets list of tax department codes.
 - ... **[BankTransferTransitCodes]** Adds, Updates or Deletes transit code.
 - ... **[BankTransfersTransitCodesList]** Gets list of transit codes.
 - ... **[BankTransferTreasuryCode]** Adds, Updates or Deletes treasury code.
 - ... **[BankTransferTreasuryCodesList]** Gets list of treasury codes.
- .. Cashflow
 - ... **[CashflowAccount]** Adds, Updates or Deletes cashflow account.
 - ... **[CashflowAccountsList]** Gets list of cashflow accounts.
- .. Cost centre
 - ... **[CostCentreGroup]** Adds, Updates or Deletes cost centre group.
 - ... **[CostCentreGroupsList]** Gets list of cost centre groups.
- .. Fixed assets
 - ... **[FixedAssetsFormulasList]** Gets list of fixed assets formulas.
- .. Profit and loss
 - ... **[ProfitAndLossCategory]** Adds, Updates or Deletes profit and loss category.
 - ... **[ProfitAndLossCategoriesList]** Gets list of profit and loss categories.
- .. Salary
 - ... **[GetDataTableSalaryAccounts]** Gets list of salary accounts.
 - ... **[SalaryAccount]** Adds, Updates or Deletes salary account.
 - ... **[SalaryAccountsList]** Gets list of salary accounts.
 - ... **[SalaryAccruedField]** Adds, Updates or Deletes salary accrued field.
 - ... **[SalaryAccruedFieldsList]** Gets list of salary accrued fields.
 - ... **[SalaryResultField]** Adds, Updates or Deletes salary result field.
 - ... **[SalaryResultFieldsList]** Gets list of salary result fields.
- .. Trial balance
 - ... **[TrialBalanceAccountsRelation]** Adds, Updates or Deletes accounts relation for trial balance.
 - ... **[TrialBalanceAccountsRelationsList]** Gets list of accounts relations for trial balance.
 - ... **[TrialBalanceActiveAccount]** Adds, Updates or Deletes active account for trial balance.
 - ... **[TrialBalanceActiveAccountsList]** Gets list of trial balance active accounts for trial balance.
 - ... **[TrialBalanceCategory]** Adds, Updates or Deletes trial balance category for trial balance.
 - ... **[TrialBalanceCategoriesList]** Gets list of trial balance categories for trial balance.
 - ... **[TrialBalancePassiveAccount]** Adds, Updates or Deletes trial balance apssive for trial balance.
 - ... **[TrialBalancePassiveAccountsList]** Gets list of trial balance passive accounts for trial balance..

LogIn

POST/api/LogIn

In case testing ask the company "Oris" to provide you with the [LogIn] parameters. Otherwise ask server IT administrator. Returns token string.

Schema

```
{
  "user": "string",
```

```

"password": "string",
"language": "string",
"databaseName": "string",
"databaseUserName": "string",
"databaseUserPassword": "string",
"databaselsLocal": true,
"localDatabasePath": "string",
"sqlServer": "string",
"useWindowsAuthentication": true
}

```

Field description

"user": Oris Accounting user name
"password": Oris Accounting password
"language": Language for error description: English (Default) = "en-EN", Georgian = "ka-GE", Russian = "ru-RU"
"databaseName": Database name
"databaseUserName": Database user name
"databaseUserPassword": Database user password
"databaselsLocal": If compact Edition database = true, for MS SQL server database = false
"localDatabasePath": If [DatabaselsLocal]=true, the path to the local database file located on the server
"sqlServer": MS SQL Server name
"useWindowsAuthentication": Use windows authentication for MS SQL Server

Examples

1. Log in with user name "Administrator" with password = "admin1234". Rest of the parameters will be taken from the server configuration file **C:\OAWebAPI\OAWebAPI.config**.

Request body:

```

{
  "user": "Administrator",
  "password": "admin1234"
}

```

Server response Code(200):

```

{
  "token":
  "dyQMHU2beL+SzJKntVQDjr22qib7hCZBkQ+YDmnyv6xNN+bdO4HlBx/nx/guHwQyJlzKIB65P/1PR6EFWTlwoP/jvv6
  1IEoEQwcOn1xS0Hz6YOLfL2BlN8Hhzzwu+SjJWopE0Kt7gYPPCGVCPBlpRd8sqgwWbKFqwg5329F5pxjkqx1kyJg0O
  Y97EnayMeBxpADsPZpyFi5J8bjeoaedqKpuRIWSRGD2B79yakC+kH91XafC4FwdeWcf6DID99OPF5iLvu1INNM6Tt5
  71hiEdYiSSECKC1JM6J12sSCzVG09/eycX5cLzPLrbaATDZ5AoVAfoMkLkEYExmf4b9/GU+Qz4J4KkKF7RVF1rV5N
  AslJKCSuwGm5V/d4PK+AjnXeGEAHapwTYU4t59GU356GhuC9q4iKqdvGlmf7tsQuF8Gaz3ufCYbnmY+DL1nBE1j"
}

```

Server response Code(400):

```

[
  {
    "errorNumber": 51107,
    "description": "Error SQL database connection!",
    "comment": "Can not connect to database.[NDatabasea]\r\nContact your SQL server administrator.\r\n[4060]
    Cannot open database \"NDatabasea\" requested by the login. The login failed.[18456] Login failed for user 'sa'.",
    "command": "",
    "errorType": "ErrorType_Permission",
    "source": "OA_BusinessObject.dll",
    "class": "DataBase",
    "entryPoint": "IDatabaseConnection",
    "resourceDLL_ForTranslation": "OrisAccounting",
    "errorPointer": 0
  }
]

```

2. Log in to SQL server – “.\ORIS”, SQL database – “MyDatabase” for user name - “Administrator” with password = “admin1234” and database user name - “sa” and database password – “admin987654”. Language for error description – Georgian.

Request body:

```

{
  "user": "Administrator",

```

```

"password": "admin1234",
"language": "ka-GE",
"databaseName": "MyDatabase",
"databaseUserName": "Administrator",
"databaseUserPassword": "admin987654",
"sqlServer": ".\\ORIS"
}

```

3. Log in to SQL CE (Local data base) located in “C:\ORIS Accounting 7.0\Data\Default.sdf” file, for user name - “Administrator” with password = “admin0”. Language for error description – English.

Request body:

```

{
"user": "Administrator",
"password": "admin0",
"language": "en-EN",
"databaseIsLocal": true,
"localDatabasePath": "C:\\ORIS Accounting 7.0\\Data\\Default.sdf"
}

```

Accounting - Chart of accounts

Account

POST/api/Account

Adds new account. Returns OK with ID value or Error description Json.

Schema

```

{
"token": "string",
"accountCategoryInt": 0,
"accountComment": "string",
"accountEnableMinusStockBalance": true,
"accountIsClosed": true,
"accountName": "string",
"accountNonbalance": true,
"accountNumber": "string",
"accountTypeInt": 0,
"accountWriteOffMethodInt": 0,
"oA_DebitorCreditorID": 0,
"oA_ItemsID": 0,
"parentAccountNumber": "string"
}

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"accountCategoryInt": Financial = 0, Item = 1, DebitorCreditor = 2. Default=0

"accountComment":

"accountEnableMinusStockBalance":

"accountIsClosed":

"accountName": Sets account name if [AccountCategoryInt]=0.

"accountNonbalance":

"accountNumber":

"accountTypeInt": AccountTypeInt: Active = 0, Passive = 1. Default gets from parent account

"accountWriteOffMethodInt": AccountWriteOffMethodInt: None = 0, FIFO = 1, LIFO = 2, Avarage = 3. Default=0

"oA_DebitorCreditorID": If specified than account category will be 'DebitorCreditor' and [Name] will be formed from [Code]+[Name] of DebitorCreditor object. See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value).

"oA_ItemsID": If specified than account category will be 'Item' and [Name] will be formed from [Code]+[Name] of Item object. See [ItemsList] method (use [OA_ItemsID] value).

"parentAccountNumber": Parent account to form tree structure. Specify an empty value "" to specify the root account

Examples

1. Add new cash account - "Cashier N1" with specified number - "1110 1", under the parent account - "1110" and comment - "Special account for cashier 1."

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "accountComment": " Special account for cashier 1.",
  "accountName": " Cashier N1",
  "accountNumber": "1110 1",
  "parentAccountNumber": "1110"
}
```

Server response Code(200):

```
{
  "id": 215,
  "idFieldName": "OA_AccountsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51103,
    "description": "Parent Account transaction detected!",
    "comment": "Account [1110].\r\nFor adding sub account, under account which has entry, you can do following:\r\n1. For account [1110] change account number on [1110-0].\r\n2. For account [1100] add new sub account [1110].\r\n3. For account [1110-0] set parent [1110].\r\n4. After this, for account [1110] it is possible to add new sub account.",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Account",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

2. Add new bank account under the parent account - "1210". New account name - "Bank of Georgia"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "accountName": "Bank of Georgia",
  "parentAccountNumber": "1210"
}
```

3. Add new debtor/creditor (organization or person) account under the parent account - "1410".
OA_DebitorCreditorID – "10"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 10,
  "parentAccountNumber": "1410"
}
```

4. Add new Item (commodity, fixed asset or service) account under the parent account - "1610".
OA_ItemsID – "2"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ItemsID": 2,
  "parentAccountNumber": "1610"
}
```

PUT/api/Account

Updates account. Returns OK with ID value or Error description Json.

Schema

```
{
  "token": "string",
  "oA_AccountsID": 0,
  "accountCategoryInt": 0,
  "accountComment": "string",
  "accountEnableMinusStockBalance": true,
  "accountIsClosed": true,
  "accountName": "string",
  "accountNonbalance": true,
  "accountNumber": "string",
  "accountTypeInt": 0,
  "accountWriteOffMethodInt": 0,
  "oA_DebitorCreditorID": 0,
  "oA_ItemsID": 0,
  "parentAccountNumber": "string"
}
```

Field description

[Token] and [OA_AccountsID] is necessary. Specify only the fields you want to edit.

"token": Set [token] string from [LogIn] response value

"oA_AccountsID": See [AccountsList] method (use [OA_AccountsID] value).

"accountCategoryInt": Financial = 0, Item = 1, DebitorCreditor = 2. Default=0

"accountComment":

"accountEnableMinusStockBalance":

"accountIsClosed":

"accountName": Sets account name if [AccountCategoryInt]=0.

"accountNonbalance":

"accountNumber":

"accountTypeInt": AccountTypeInt: Active = 0, Passive = 1. Default gets from parent account

"accountWriteOffMethodInt": AccountWriteOffMethodInt: None = 0, FIFO = 1, LIFO = 2, Avarage = 3. Default=0

"oA_DebitorCreditorID": If specified than account category will be 'DebitorCreditor' and [Name] will be formed from [Code]+[Name] of DebitorCreditor object. See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value).

"oA_ItemsID": If specified than account category will be 'Item' and [Name] will be formed from [Code]+[Name] of Item object. See [ItemsList] method (use [OA_ItemsID] value).

"parentAccountNumber": Parent account to form tree structure. Specify an empty value "" to specify the root account

Examples

1. Update cash account - "Cashier N1" with OA_AccountsID – "215" and specify comment - "Special account for cashier number 1."

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_AccountsID": 215,
  "accountComment": " Special accout for cashier number 1."
}
```

Server response Code(200):

```
{
  "id": 215,
  "idFieldName": "OA_AccountsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_AccountsID = 215",
    "command": "",
    "errorType": "ErrorType_Error",
  }
]
```

```

"source": "OA_BusinessObject.dll",
"class": "Account",
"entryPoint": "GetProperties",
"resourceDLL_ForTranslation": "ORIS_Accounting",
"errorPointer": 0
}
]

```

2. Update Item account with OA_AccountsID – “219”, set the write-off method as FIFO and allow a minus stock balance.

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"oA_AccountsID ": 219,
"accountEnableMinusStockBalance": true,
"accountWriteOffMethodInt": 1
}

```

3. Update Item account with “OA_AccountsID” – 219 and close it.

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"oA_AccountsID": 219,
"accountIsClosed": true
}

```

DELETE/api/Account

Returns OK with ID value or Error description Json.

Schema

```

{
"token": "string",
"oA_AccountsID": 0
}

```

Field description

[Token] and [OA_AccountsID] is necessary. Specify only the fields you want to edit.

***token**: Set [token] string from [LogIn] response value

***oA_AccountsID**: See [AccountsList] method (use [OA_AccountsID] value).

Examples

1. Delete account with “OA_AccountsID” – 219.

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"oA_AccountsID": 219
}

```

Server response Code(200):

```

{
"id": 219,
"idFieldName": "OA_AccountsID"
}

```

Server response Code(400):

```

[
{
"errorNumber": 51109,
"description": "ORIS_Tools internal error!",
"comment": "OA_AccountsID=219 Account [3110 1]\nExist relation to another table.\nRelated table [OA_Entries].\n\n[547] The DELETE statement conflicted with the REFERENCE constraint

```

"FK_OA_Entries_OA_Accounts\". The conflict occurred in database \"NDatabaseEN\", table \"dbo.OA_Entries\", column 'OA_AccountsID'.[3621] The statement has been terminated.",

```
"command": "",
"errorType": "ErrorType_Error",
"source": "OA_BusinessObject.dll",
"class": "Account",
"entryPoint": "RealDelete",
"resourceDLL_ForTranslation": "ORIS_Administrate",
"errorPointer": 0
}
]
```

AccountsList

POST/api/AccountsList

Gets chart of accounts. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

[Token] is necessary.

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1. Example: get account by ID=123 - "[OA_AccountsID]=123" or get accounts whose numbers start with 11 and level is 2 - "[Account] LIKE N'11%' AND [Level]=2"

"sort": Use SQL ORDER BY string with field names. Example: "[Account],[Name]"

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get first 2 accounts from database

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_AccountsID": 1,
      "Account": "1000",
      "ParentID": 0,
      "Name": "Carrent assets",
      "Level": 0,
      "Comment": ""
    }
  ]
}
```

```

    "Close": false,
    "Leaf": false,
    "Enable Minus Stock Balance": false,
    "Type": 0,
    "WriteOff method": 0,
    "Nonbalance": false,
    "Category": 0
  },
  {
    "OA_AccountsID": 10,
    "Account": "1100",
    "ParentID": 1,
    "Name": "Cash on Hand",
    "Level": 1,
    "Comment": "",
    "Close": false,
    "Leaf": false,
    "Enable Minus Stock Balance": false,
    "Type": 0,
    "WriteOff method": 0,
    "Nonbalance": false,
    "Category": 0,
    "Parent account": "1000"
  }
]
}

```

2. Get the 2nd page from the entire list of accounts, 15 records per page

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 15,
  "pageNumber": 2
}

```

3. Get all field names for further use in the filter

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}

```

4. Get a list of accounts whose account numbers start with "11" and level is 2

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Account] LIKE N'11%' AND [Level]=2"
}

```

5. Get a list of debtor/creditors (organization or person) accounts under "1410" account and sort it by account name

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[OA_DebitorCreditorID]>0 AND [Parent account] = N'1410'",
  "sort": "[Name]"
}

```

6. Get a list of items (commodity, fixed asset or service) accounts under "1610" account and sort it by account number

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[OA_ItemsID]>0 AND [Parent account] = N'1610'",
  "sort": "[Name]"
}

```

GetDebtorCreditorAccountByParent

POST/api/GetDebtorCreditorAccountByParent

Gets or Adds DebtorCreditor account by parent account. Returns OA_AccountsID value.

Schema

```
{
  "token": "string",
  "parentAccount": "string",
  "debtorCreditorID": 0,
  "addNewAccountIfNotExists": true,
  "raiseError": true
}
```

Field description

Token and ParentAccount is necessary.

"token": Set [token] string from [LogIn] response value,

"parentAccount": Parent account number. Example: "3110".

"debtorCreditorID": OA_DebtorCreditorID value. See [DebtorCreditorsList] method,

"addNewAccountIfNotExists": Add debtor/creditor new account if not exists,

"raiseError": Fills error description

Examples

1. Get debtor/creditors OA_AccountsID (organization or person) under "3110 - Accounts payable – trade" account using "debtorCreditorID": - 1 "Organization"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "parentAccount": "3110",
  "debtorCreditorID": 1,
  "raiseError": true
}
```

Server response Code(200):

```
{
  "id": 224,
  "idFieldName": "OA_AccountsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51188,
    "description": "Account does not exist under parent account!",
    "comment": "",
    "command": "WHERE [ParentID] = 119 AND [OA_DebtorCreditorID] = 1",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Account",
    "entryPoint": "GetAccountIDByParent",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

2. Add debtor/creditors (organization or person) accounts under "1410 - Accounts receivable - trade" account using "debtorCreditorID"- 2 "Organization2"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "parentAccount": "1410",

```

```
"debitorCreditorID": 2,  
"addNewAccountIfNotExists": true  
}
```

GetItemAccountByParent

POST/api/GetItemAccountByParent

Gets or Adds Item account by parent account. Returns OA_AccountsID value.

Schema

```
{  
  "token": "string",  
  "parentAccount": "string",  
  "oA_ItemsID": 0,  
  "addNewAccountIfNotExists": true,  
  "raiseError": true  
}
```

Field description

Token and ParentAccount is necessary.

"token": Set [token] string from [LogIn] response value,
"parentAccount": Parent account number. Example: "1610".
"oA_ItemsID": OA_ItemsID value. See [ItemsList] method,
"addNewAccountIfNotExists": Add item new account if not exists,
"raiseError": Fills error description

Examples

1. Get item OA_AccountsID under "1610 - Merchandise inventory" account using "oA_ItemsID": - 1
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "parentAccount": "1610",  
  "oA_ItemsID": 1,  
  "raiseError": true  
}
```

Server response Code(200):

```
{  
  "id": 230,  
  "idFieldName": "OA_AccountsID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51188,  
    "description": "Account does not exist under parent account!",  
    "comment": "",  
    "command": "WHERE [ParentID] = 69 AND [OA_ItemsID] = 5",  
    "errorType": "ErrorType_Error",  
    "source": "OA_BusinessObject.dll",  
    "class": "Account",  
    "entryPoint": "GetAccountIDByParent",  
    "resourceDLL_ForTranslation": "ORIS_Accounting",  
    "errorPointer": 0  
  }  
]
```

2. Add items accounts under "1610" account using "oA_ItemsID" - 5
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",
```

```
"parentAccount": "1610",
"oA_ItemsID": 5,
"addNewAccountIfNotExists": true
}
```

GetProgenyOA_AccountsIDs

POST/api/GetProgenyOA_AccountsIDs

Gets all sub accounts IDs (OA_AccountsID) for parent account. Returns comma separated ID values.

Schema

```
{
  "token": "string",
  "parentID": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value,
"parentID": See [AccountsList] method (use [OA_AccountsID] value)

Examples

1. Get a list of accounts under "1610" "parentID" using "OA_AccountsID" - 56

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "parentID": 56
}
```

Server response Code(200):

```
{
  "id": "56,217,258",
  "idFieldName": "OA_AccountsID"
}
```

Accounting - Entries

Transaction

POST/api/Transaction

Adds new accounting transaction. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "transactionComment": "string",
  "transactionDate": "2023-04-25T10:29:30.008Z",
  "transactionDelay": true,

    "debitEquivalent": 0,
    "creditEquivalent": 0,
    "rate2": 0,
    "debitEquivalent2": 0,
    "creditEquivalent2": 0,
    "stockRegisterRate": 0,
    "debitStock": 0,
    "creditStock": 0,
    "internalTurnover": true,
    "actionInCaseDisbalance": 0,
    "oA_AccountsID": 0,
    "oA_CashflowCategoriesID": 0,
    "oA_CurrenciesID": 0,
    "oA_CostCentreID": 0,
    "oA_CostUnitID": 0,
    "oA_StockUnitsID": 0,
    "relatedOA_EntriesID": 0
  }
]
}

```

Field description

[Token] and [TransactionDate] is necessary. Specify only those fields that you want to fill.

"**token**": Set [token] string from [LogIn] response value,

"**transactionComment**":

"**transactionDate**":

"**transactionDelay**":

"**transactionDocumentalConfirm**":

"**transactionDocumentNumber**":

"**correctDisbalance**": If specified True, checks disbalance and reflects it the main entry. If not, then only disbalance is checked. Default = True

"**transactionEntries**":

"**mainEntry**": Set true if entry is main. Default=false.

"**account**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_AccountsID] property specified

"**debitAmount**": Debit amount

"**creditAmount**": Credit amount

"**currency**": See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified. If omitted, gets first register currency from parameters

"**debitQuantity**": Debit quantity for the item account type

"**creditQuantity**": Credit quantity for the item account type

"**unit**": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified

"**costCentre**": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters

"**costUnit**": See [CostUnitsList] method (use [Name] value). Can be omitted if [OA_CostUnitID] property specified. If omitted, gets cost unit from parameters

"**amountCalculationType**": CreditAmountCalculation = 0, DebitAmountCalculation = 1, None = 2. Default=0

"**comment**":

"**cashFlow**": See [CashflowCategoriesList] method (use [Abridgment] value). Can be omitted if [OA_CashflowCategoriesID] property specified

"**memorial**":

"**rate**": Will be filled by rate from currency rate on transaction date. See [CurrencyRate] method

"**isRateFixed**": Sets a fixed rate flag. If true, then equivalent values will not be recalculated when the exchange rate changes

"**debitEquivalent**": If it is not specified, it will be filled with [DebitAmount] multiplied by the currency rate on the date of the transaction

"**creditEquivalent**": If it is not specified, it will be filled with [CreditAmount] multiplied by the currency rate on the date of the transaction

"**rate2**": Will be filled by rate from currency rate on transaction date. See [CurrencyRate] method

"**debitEquivalent2**": If it is not specified, it will be filled with [DebitAmount] multiplied by the currency rate2 on the date of the transaction

"**creditEquivalent2**": If it is not specified, it will be filled with [CreditAmount] multiplied by the currency rate2 on the date of the transaction

"**stockRegisterRate**": Will be filled by register rate for Item method properties if transaction entry unit is different from Item register unit

"**debitStock**": Calculates from [DebitQuantity]*[StockRegisterRate]

"**creditStock**": Calculates from [CreditQuantity]*[StockRegisterRate]

"**internalTurnover**": If set to true - this entry will not be included in turnover reports

"**actionInCaseDisbalance**": Use it in case [MainEntry] = true. Add disbalance to main entry = 0, Distribute disbalance to non main entries = 1. Default=0

"**oA_AccountsID**": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [account] property specified

"**oA_CashflowCategoriesID**": See [CashflowCategoriesList] method (use [OA_CashflowCategoriesID] value). Can be omitted if [CashFlow] property specified

"**oA_CurrenciesID**": See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currency] property specified. If ommite, gets firts register currency from parameters

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If ommite, gets cost centre from parameters

"**oA_CostUnitID**": See [CostUnitsList] method (use [OA_CostUnitID] value). Can be omitted if [CostUnit] property specified. If ommite, gets cost unit from parameters

"**oA_StockUnitsID**": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified

"**relatedOA_EntriesID**": Use this property to increase the cost of items in the FIFO/LIFO invoice list. First, define an invoice for the goods receipt operation. Then use the [GetTransactionByID] method to determine the [OA_EntriesID] from the goods receipt entries from [transactionEntries]. The accounts in this entry and the related entry must match

Examples

1. Add easy entry, transaction - transfer 200 GEL from bank account "1210 1" Bank of Georgia to cash account "1110 2" Cashier N1.
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "transactionDate": "2023-04-26T13:05:16.657Z",
  "transactionEntries": [
    {
      "mainEntry": true,
      "account": "1110 2",
      "debitAmount": 200
    },
    {
      "mainEntry": false,
      "account": "1210 1",
      "creditAmount": 200
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 31,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51038,
    "description": "Account is closed!",
    "comment": "Account [1110 2] Cashier N1\nUncheck close check box for this account and resume or cancel transaction\n OA_AccountisID=220\nOA_TransactionsID [1008]\nDocument number []\nDate[26.04.2023 13:05:16]",
  }
]
```

```

"command": "",
"errorType": "ErrorType_Error",
"source": "OA_BusinessObject.dll",
"class": "Transaction",
"entryPoint": "PostUpdateActionStage1",
"resourceDLL_ForTranslation": "ORIS_Accounting",
"errorPointer": 0
}
]

```

2. Add transaction in case disbalance - transfer 200 GEL from bank account "1210 1" to cash account "1110 2" 400 GEL

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"transactionDate": "2023-04-26T13:05:16.657Z",
"correctDisbalance": false,
"transactionEntries": [
{
"mainEntry": true,
"account": "1110 2",
"debitAmount": 200
},
{
"mainEntry": false,
"account": "1210 1",
"creditAmount": 400
}
]
}

```

Server response Code(400):

```

[
{
"errorNumber": 51040,
"description": "Disbalance detected!",
"comment": "200 <> 400\nCheck main entry. Index [1]. (Off-balance entry is not involved in determining the balance)",
"command": "",
"errorType": "ErrorType_Error",
"source": "OA_BusinessObject.dll",
"class": "Transaction",
"entryPoint": "DisbalanceAction",
"resourceDLL_ForTranslation": "ORIS_Accounting",
"errorPointer": 0
}
]

```

3. Add Difficult Transaction - Revenue income using debtor/creditor account 1410 1, income account for supply 6110 1 and payable VAT account 3330 and payment (cash income) using cash account 1110 2 and debtor/creditor account 1410 1

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"transactionDate": "2023-04-26T13:05:16.657Z",
"transactionEntries": [
{
"mainEntry": true,
"account": "1410 1",
"debitAmount": 1200
},
{
"mainEntry": false,
"account": "6110 1",
"creditAmount": 1016.94
}
]
}

```

```

    "mainEntry": false,
    "account": "3330",
    "creditAmount": 183.06
  },
  {
    "mainEntry": true,
    "account": "1110 2",
    "debitAmount": 1200
  },
  {
    "mainEntry": false,
    "account": "1410 1",
    "creditAmount": 1200
  }
]
}.

```

4. Add transaction in currency – Billing for services 200 EUR using debtor/creditor account 3110 4 and expense account 7411

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "transactionEntries": [
    {
      "mainEntry": true,
      "account": "3110 4",
      "currency": "EUR"
    },
    {
      "mainEntry": false,
      "account": "7411",
      "debitAmount": 200,
      "currency": "EUR"
    }
  ]
}

```

5. Add accept the goods transaction using debtor/creditor account 3110 4, item account 1610 1 – amount 200 GEL, quantity – 10 piece. item account 1610 2 – amount 100 GEL, quantity – 5 piece and payed VAT account 3340 amount 45.76 GEL.

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "transactionEntries": [
    {
      "mainEntry": true,
      "account": "3110 1"
    },
    {
      "mainEntry": false,
      "account": "1610 1",
      "debitAmount": 200,
      "debitQuantity": 10
    },
    {
      "mainEntry": false,
      "account": "1610 2",
      "debitAmount": 100,
      "debitQuantity": 5
    },
    {
      "mainEntry": false,
      "account": "3340",
      "debitAmount": 45.76
    }
  ]
}

```

```
}
```

PUT/api/Transaction

Updates accounting transaction. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0,
  "transactionComment": "string",
  "transactionDate": "2023-04-25T12:34:46.232Z",
  "transactionDelay": true,
  "transactionDocumentalConfirm": true,
  "transactionDocumentNumber": "string",
  "clearEntries": true,
  "correctDisbalance": true,
  "transactionEntries": [
    {
      "oA_EntriesID": 0,
      "deleteRow": true,
      "mainEntry": true,

      "oA_CostUnitID": 0,
      "oA_StockUnitsID": 0,
      "relatedOA_EntriesID": 0
    }
  ]
}
```

Field description

[Token] and [OA_TransactionsID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

"transactionComment":

"**transactionDate**":
"transactionDelay":
"transactionDocumentalConfirm":
"transactionDocumentNumber":
"clearEntries": Clears all entries for the transaction
"correctDisbalance": If specified True, checks disbalance and reflects it the main entry. If not, then only disbalance is checked. Default = True

"transactionEntries": Set OA_EntriesID=0 to add a new entry specification. Specify the OA_EntriesID value to update information about entry fields. To delete existing entry, specify the value OA_EntriesID and set "DeleteRow"=true
"oA_EntriesID": Specify an existing OA_EntriesID to update or remove related item information, or 0 to add a new related item
"deleteRow": If true, deletes entry information for specified OA_EntriesID value
"mainEntry": Set true if entry is main. Default=false
"account": See [AccountsList] method (use [Account] value)
"debitAmount":
"creditAmount":
"currency": See [CurrenciesList] method (use [Currency] value)
"debitQuantity":
"creditQuantity":
"unit": See [StockUnitsList] method (use [Unit] value)
"costCentre": See [CostCentresList] method (use [Name] value)
"costUnit": See [CostUnitsList] method (use [Name] value)
"amountCalculationType": CreditAmountCalculation = 0, DebitAmountCalculation = 1, None = 2. Default=0
"comment":
"cashFlow": See [CashflowCategoriesList] method (use [Abridgment] value)
"memorial":
"rate": Will be filled by rate from currency rate table on transaction date. See [CurrencyRate] method
"isRateFixed": Sets a fixed rate flag
"debitEquivalent":
"creditEquivalent":
"rate2": Will be filled by rate from currency rate table on transaction date. See [CurrencyRate] method
"debitEquivalent2":
"creditEquivalent2":
"stockRegisterRate": Will be filled by register rate for Item method properties if transaction entry unit is different from Item register unit
"debitStock": Calculates from [DebitQuantity]*[StockRegisterRate]
"creditStock": Calculates from [CreditQuantity]*[StockRegisterRate]
"internalTurnover": If set to true - this entry will not be included in turnover reports
"actionInCaseDisbalance": Use it in case [MainEntry] = true. Add disbalance to main entry = 0, Distribute disbalance to non main entries = 1. Default=0
"oA_AccountsID": See [AccountsList] method (use [OA_AccountsID] value)
"oA_CashflowCategoriesID": See [CashflowCategoriesList] method (use [OA_CashflowCategoriesID] value)
"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value)
"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value)
"oA_CostUnitID": See [CostUnitsList] method (use [OA_CostUnitID] value)
"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value)
"relatedOA_EntriesID": Use this property to increase the cost of items in the FIFO/LIFO invoice list. First, define an invoice for the goods receipt operation. Then use the [GetTransactionByID] method to determine the [OA_EntriesID] from the goods receipt entries from [transactionEntries]. The accounts in this entry and the related entry must match

Examples

1. Update transaction using "oA_TransactionsID": - 34 accept the goods transaction change amount in item account 1610 1 – amount 300 GEL and item account 3340 2 – amount 400 GEL and payed VAT account 3340 amount 106.78 GEL.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",

```

DELETE/api/Transaction

Returns OK or Error description Json.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"**token**": Set [token] string from [LogIn] response value

"**oA_TransactionsID**":

Examples

1. Delete transaction with oA_TransactionsID – "31".
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_AccountsID": 31  
}
```

Server response Code(200):

```
{  
  "id": 31,  
  "idFieldName": "OA_TransactionsID"  
}
```

Server response Code(400):

  "resourceDLL_ForTranslation": "ORIS_Accounting",  
  "errorPointer": 0  
}  
]
```

GetTransactionByID

POST/api/GetTransactionByID

Gets transaction and its accounting entries by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value)

Examples

1. Get transaction and its accounting entries using oA_TransactionsID – "31".

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 31
}
```

EntriesList

POST/api/EntriesList

Gets list of accounting entries. Returns [Info] and [Result] tables.

Schema

```

{
"token": "string",

```

```

"diapazonStartDate": "2023-04-27T07:09:45.314Z",
"diapazonEndDate": "2023-04-27T07:09:45.314Z",
"topRecordsCount": 0,
"filter": "string",
"sort": "string",
"pageNumber": 0
}

```

Field description

[Token],[DiapazonStartDate] and [DiapazonEndDate] is necessary.

"token": Set [token] string from [LogIn] response value

"diapazonStartDate": Diapazon start date

"diapazonEndDate": Diapazon end date (to). Example: Period of 2010 year specify - "DiapazonStartDate":"2010-01-01", "DiapazonEndDate":"2011-01-01"

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1. Example: get entries where debit amount more than 100 - "[Debit amount]>100" or get entries where account numbers start with 11 and correspondent account = 3110 1 "[Account] LIKE N'11% AND [Correspondent account]=N'3110 1"

"sort": Use SQL ORDER BY string with field names. Example: "[Transaction date],[Account]"

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first transaction from database in specified diapazon

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "diapazonStartDate": "2023-04-26T07:09:45.314Z",
  "diapazonEndDate": "2023-04-27T07:09:45.314Z",
  "topRecordsCount": 1
}

```

Server response Code(200):

```

2. Get the 2nd page from the entire list of transactions, 15 records per page

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"topRecordsCount": 15,
"pageNumber": 2
}

```

3. Get a list of transactions whose account numbers start with 11 and sort it by date

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"filter": "[Account] LIKE N'11%",
"sort": "[Transaction date]"
}

```

TransactionSetTaxDocument

POST/api/TransactionSetTaxDocument

Sets revenue service Tax Document ID and number for the transaction. Returns true or False.

Schema

```

{
"token": "string",
"oA_TransactionsID": 0,
"rS_TaxDocument_ID": 0,
"rS_TaxDocument_Number": "string"
}

```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

"rS_TaxDocument_ID": Sets Tax Document ID value recieved from revenue service

"rS_TaxDocument_Number": Sets Tax Document number recieved from revenue service

Examples

1. Sets revenue service Tax Document ID and number for the transaction by "oA_TransactionsID": - 34

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"oA_TransactionsID": 34,
"rS_TaxDocument_ID": 1,
"rS_TaxDocument_Number": "123456789"
}

```

Server response Code(200):

```

{
"id": 34,
"idFieldName": "OA_TransactionsID"
}

```

```
}
```

TransactionSetVAT

POST/api/TransactionSetVAT

Sets revenue service VAT ID and number for the transaction. Returns true or False.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0,  
  "rS_VAT_ID": 0,  
  "rS_VAT_Number": "string"  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"**token**": Set [token] string from [LogIn] response value

"**oA_TransactionsID**":

"**rS_VAT_ID**": Sets VAT ID recieved from revenue service

"**rS_VAT_Number**": Sets VAT number recieved from revenue service

Examples

1. Sets revenue service VAT ID and number for the transaction

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_TransactionsID": 34,  
  "rS_VAT_ID": 203024188,  
  "rS_VAT_Number": "js-72 4164071"  
}
```

Server response Code(200):

```
{  
  "id": 34,  
  "idFieldName": "OA_TransactionsID"  
}
```

TransactionSetWaybill

POST/api/TransactionSetWaybill

Sets revenue service Way bill ID and number for the transaction. Returns true or False.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0,  
  "rS_Waybill_ID": 0,  
  "rS_Waybill_Number": "string"  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"**token**": Set [token] string from [LogIn] response value

"**oA_TransactionsID**":

"rS_Waybill_ID": Sets waybill ID recieved from revenue service
"rS_Waybill_Number": Sets waybill number recieved from revenue service

Examples

1. Sets revenue service VAT ID and number for the transaction
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 34,
  "rS_Waybill_ID": 721476227,
  "rS_Waybill_Number": "0686916171"
}
```

Server response Code(200):

```
{
  "id": 34,
  "idFieldName": "OA_TransactionsID"
}
```

Accounting – Start balance

SetStartBalance

POST/api/SetStartBalance

Sets start balance data.

Schema

```
{
  "token": "string",
  "account": "string",
  "oA_CurrenciesID": 0,
  "oA_CostCentreID": 0,
  "oA_CostUnitID": 0,
  "debitStartBalance": 0,
  "creditStartBalance": 0,
  "isRateFixed": true,
  "debitStartEquivalent": 0,
  "creditStartEquivalent": 0,
  "debitStartEquivalent2": 0,
  "creditStartEquivalent2": 0,
  "startStockBalance": 0,
  "startStockAvailableBalance": 0,
  "stockUnit": "string",
  "oA_EntriesID": 0
}
```

Field description

[Token],[Account],[OA_CurrenciesID],[OA_CostCentreID] and [OA_CostUnitID] is necessary.
Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"account": See [AccountsList] method (use [Account] value)

"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value)

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value)

"oA_CostUnitID": See [CostUnitsList] method (use [OA_CostUnitID] value)

"debitStartBalance": Start debit balance

"creditStartBalance": startn credit balance

"isRateFixed": If true, then equivalent values will not be recalculated when the exchange rate changes

"debitStartEquivalent": If omitted, it will be filled with [DebitStartBalance] multiplied by the currency rate at the balance start date

"**creditStartEquivalent**": If omitted, it will be filled with [CreditStartBalance] multiplied by the currency rate at the balance start date

"**debitStartEquivalent2**": If omitted, it will be filled with [DebitStartBalance] multiplied by the currency rate2 at the balance start date

"**creditStartEquivalent2**": If omitted, it will be filled with [CreditStartBalance] multiplied by the currency rate2 at the balance start date

"**startStockBalance**": The start stock balance for the account of item type

"**startStockAvailableBalance**": The start available stock balance for the account of item type. If omitted, it will be filled from [StartStockBalance]

"**stockUnit**": See [StockUnitsList] method (use [Unit] value). If omitted, gets account related item register minimum unit

"**oA_EntriesID**": Specify if you want to modify an existing start balance entry. Otherwise, the start balance will be determined by account, currency, cost center and cost unit

Examples

1. Set start balance, number - "1110 1 debit amount 100 GEL, General cost centre, Total cost unit

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "account": "1110 1",
  "debitStartBalance": 100,
  "oA_CurrenciesID": 1,
  "oA_CostCentreID": 1,
  "oA_CostUnitID": 1
}
```

Server response Code(200):

```
{
  "id": 142,
  "idFieldName": "OA_EntriesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51038,
    "description": "Account is closed!",
    "comment": "Account [1110 1]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "StartBalances",
    "entryPoint": "SetStartStockUnit",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

2. Set start balance in currency, number - "1210 1 debit amount 100 USD, New cost center, Newcost unit

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "account": "1210 1",
  "debitStartBalance": 100,
  "oA_CurrenciesID": 2,
  "oA_CostCentreID": 2,
  "oA_CostUnitID": 2
}
```

StartBalancesGetStartDate

POST/api/StartBalancesGetStartDate

Gets start balances date.

Schema

```
{  
  "token": "string"  
}
```

Field description

"**token**": Set [token] string from [LogIn] response value

Examples

1. Get start balances date

Request body:

```
{  
  "token": "... paste here [LogIn] response value ..."  
}
```

Server response Code(200):

```
"2020-05-03T00:00:00"
```

StartBalancesSetStartDate

POST/api/StartBalancesSetStartDate

Sets start balance date.

Schema

```
{  
  "token": "string",  
  "startDate": "2023-04-28T12:11:06.847Z",  
  "recalculateEquivalent": true,  
  "recalculateEquivalent2": true  
}
```

Field description

"**token**": Set [token] string from [LogIn] response value

"**startDate**":

"**recalculateEquivalent**":

"**recalculateEquivalent2**":

Examples

1. Set start balances date - "2023-12-31"

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "startDate": "2023-12-31",  
  "recalculateEquivalent": true,  
  "recalculateEquivalent2": true  
}
```

Server response Code(200):

```
{  
  "id": 1,  
  "idFieldName": "OA_TransactionsID"  
}
```

Server response Code(400):

```
[

StartBalncesList

POST/api/StartBalncesList

Gets list of start balances. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "currenciesIDs": "string",
  "costCentreIDs": "string",
  "costUnitIDs": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"currenciesIDs": Comma separated currency IDs or "" - All currencies. See [CurrenciesList] method (use [OA_CurrenciesID] value)

"costCentreIDs": Comma separated cost centre IDs or "" - All cost centres. See [CostCentresList] method (use [OA_CostCentreID] value). Default=""

"costUnitIDs": Comma separated cost unit IDs or "" - All cost units. See [CostUnitsList] method (use [OA_CostUnitID] value). Default=""

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1. Example: get account by ID=123 - "[OA_AccountsID]=123"

"sort": Use SQL ORDER BY string with field names. Example: "[Account]"

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get list of all start balances that starts with 11 in General cost center, currency –GEL ,total cost unit and sort by start debit amount

Request body:

```

{
  "token": "... paste here [LogIn] response value ..."
  "currenciesIDs": "1",
  "costCentreIDs": "1",
  "costUnitIDs": "1",
  "filter": "[Account] LIKE N'11%'AND UPPER([ViewAllStartBalances].[Currency])=N'GEL'",
  "sort": "[Start debit balance]"
}

```

Server response Code(200):

```

{
  "Info": [
    {
      "RowCount": 3,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ]
}

```

```

}
],
"Result": [

Field description

[Token] is necessary. Specify only those fields that you want to fill.

“**token**”: Set [token] string from [LogIn] response value

“**additionalInfo**”:

“**amount**”:

“**bankAccount**”: Bank account from chart of accounts. See [AccountsList] method (use [Account] value). Can be omitted if [BankAccountsID] property specified

“**bankAccountName**”:

“**bankAccountsID**”: Bank account ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [BankAccount] property specified

“**comment**”:

“**costCentreName**”: See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified

“**documentDate**”: Sets operation date. If not specified - sets current date.

“**documentNumber**”: Sets the transaction document number. If not specified, sets a unique number in the current year.

“**oA_CostCentreID**”: See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreName] property specified

“**oA_StatusID**”: See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified

“**payerBankAccount**”: See [Owner] method (use [account] value from [OwnerBankAccounts]).

“**payerBankCode**”: See [Owner] method (use [BankCode] value from [OwnerBankAccounts]).

“**payerBankID**”: See [Owner] method (use [OA_OwnerBankAccountsID] value from [OwnerBankAccounts]).

“**payerBankName**”: See [Owner] method (use [BankName] value from [OwnerBankAccounts]).

“**payerCode**”:

“**receiver**”:

“**receiverBankAccount**”:

“**receiverBankCode**”: See [BanksList] method (use [Code] value). Can be omitted if [ReceiverBankID] property specified

“**receiverBankID**”: See [BanksList] method (use [OA_BanksID] value). Can be omitted if [ReceiverCode] property specified

“**receiverBankName**”:

“**receiverCode**“: See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [ReceiverID] property specified

“**receiverID**“: See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [ReceiverCode] property specified

“**receiverParentAccount**“: See [AccountsList] method (use [Account] value). Can be omitted if [ReceiverParentAccountsID] property specified. If both are omitted, gets the account from the parameters.

“**receiverParentAccountName**“:

“**receiverParentAccountsID**“: See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ReceiverParentAccount] property specified. If both are omitted, gets the account from the parameters.

“**Status**“: See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified

“**taxPayerCode**“:

“**taxPayerName**“:

“**treasuryCode**“:

“**createAccountingEntries**“: Creates accounting entries using managerial information. Default=false

Examples

1. Add new Bank Transfer - with specified amount - 23 GEL, bankAccountsID – 216 Bank of Georgia 1210 1 and receiverParentAccountsID – 119 Accounts payable – trade 3110

Request body:

```
{
  "token": "... paste here [LogIn] response value ..."
  "amount": 23,
  "bankAccountsID": 216,
  "documentDate": "2023-06-01T11:47:32.905Z",
  "receiverParentAccountsID": 119
}
```

Server response Code(200):

```
{
  "id": 5056,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51262,
    "description": "Bank account required!",
    "comment": "OA_TransactionsID=0 [16]\n",
    "command": "",
    "errorType": "ErrorType_Permission",
    "source": "OA_BusinessObject.dll",
    "class": "BankTransfers",
    "entryPoint": "CheckInputsForTransaction",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/BankTransfer

Updates Bank Transfer. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0,
  "additionalInfo": "string",
  "amount": 0,
  "bankAccount": "string",
  "bankAccountName": "string",
  "bankAccountsID": 0,
  "comment": "string",
  "costCentreName": "string",
}
```

```

"documentDate": "2023-04-26T07:11:59.542Z",

}

```

Field description

[Token] and [OA_TransactionsID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID": See [BankTransfersList] method (use [OA_TransactionsID] value).

"additionalInfo":

"amount":

"bankAccount": Bank account from chart of accounts. See [AccountsList] method (use [Account] value).

"bankAccountName":

"bankAccountsID": Bank account ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"Comment":

"costCentreName": See [CostCentresList] method (use [Name] value).

"documentDate": Sets operation date.

"documentNumber":

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value).

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value).

"Payer":

"payerBankAccount": See [Owner] method (use [Account] value from [OwnerBankAccounts]).

"payerBankCode": See [Owner] method (use [BankCode] value from [OwnerBankAccounts]).

"payerBankID": See [Owner] method (use [OA_OwnerBankAccountsID] value from [OwnerBankAccounts]).

"payerBankName": See [Owner] method (use [BankName] value from [OwnerBankAccounts]).

"payerCode":

"receiver":

"receiverBankAccount":

"receiverBankCode": See [BanksList] method (use [Code] value).

"receiverBankID": See [BanksList] method (use [OA_BanksID] value).

"receiverBankName":

"receiverCode": See [DebitorCreditorsList] method (use [Code] value).

"receiverID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value).

"receiverParentAccount": See [AccountsList] method (use [Account] value).

"receiverParentAccountName":

"receiverParentAccountsID": See [AccountsList] method (use [OA_AccountsID] value).

"Status": See [StatusesList] method (use [Name] value).

"taxPayerCode":

"taxPayerName":

"treasuryCode":

"createAccountingEntries": Creates accounting entries using managerial information. Default=false

Examples

1. Update Bank Transfer with OA_TransactionsID – 5053 and specify amount – 83 GEL.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 5053,
  "amount": 83
}
```

Server response Code(200):

```
{
  "id": 5053,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_TransactionsID = 0",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Transaction",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/BankTransfer

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_TransactionsID":

Examples

1. Delete Bank Transfer with OA_TransactionsID – 5081.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 5081
}
```

Server response Code(200):

```
{
  "id": 5081,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_TransactionsID = 5081",
    "command": "",
    "errorType": "ErrorType_Error",

    "class": "BankTransfers",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

GetBankTransferByID

POST/api/GetBankTransferByID

Gets Bank Transfer and its accounting entries by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

Examples

1. Get Bank Transfer and its accounting entries by OA_TransactionsID – 5083.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 5083
}
```

Server response Code(200):

BankTransfersList

POST/api/BankTransfersList

Gets list of bank transfer. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

[Token] is necessary.

"**token**": Set [token] string from [LogIn] response value

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1. Example: get transfers by document number =3 and receiver bank code=BNLNGE221 - "[Document number]=N'3' AND [Receiver bank code]=N'BNLNGE221"

"**sort**": Use SQL ORDER BY string with field names. Example: "[Receiver]"

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list of bank transfer which document number starts with 1, sort by date decreasing

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "topRecordsCount": 1,
  "filter": "UPPER([ViewOA_BankTransfers].[Document number]) LIKE N'%1%'",
  "sort": "[Document date] DESC",
  "pageNumber": 2
}
```

Server response Code(200):

    "class": "Transaction",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/BankTransferForeign

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

Examples

1. Delete Bank Transfer foreign with OA_TransactionsID – "5091".

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 5091
}
```

Server response Code(200):

```
{
  "id": 5091,
}
```

```
"idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
{

BankTransferForeignsList

POST/api/BankTransferForeignsList

Gets list of bank transfer foreign. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

[Token] is necessary.

"**token**": Set [token] string from [Login] response value

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1. Example: get transfers by document number =3 and receiver bank code=BNLNGE221

"[Document number]=N'3' AND [Receiver bank code]=N'BNLNGE221"

"**sort**": Use SQL ORDER BY string with field names. Example: "[Receiver]"

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list of bank transfer foreign.

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "topRecordsCount": 1,
  "filter": "UPPER([ViewOA_BankTransferForeign].[Currency]) LIKE N'%EUR'",
  "sort": "[Document number] DESC",
  "pageNumber": 1
}
```

Server response Code(200):

```

DELETE/api/CashIncomeOrder

Returns OK or Error description Json.

Schema

```

{
  "token": "string",
  "oA_TransactionsID": 0
}

```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

Examples

1. Delete Cash Income Order - with specified OA_TransactionsID – 5109.

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 5109
}

```

Server response Code(200):

```

{
  "id": 5109,
  "idFieldName": "OA_TransactionsID"
}

```

Server response Code(400):

```

[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",

    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]

```

GetCashIncomeOrderByID

POST/api/GetCashIncomeOrderByID

Gets Cash Income Order and its accounting entries by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

Examples

1. Get Cash Income Order and its accounting entries by OA_TransactionsID – 5110.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 5110
}
```

Server response Code(200):

CashIncomeOrdersList

POST/api/CashIncomeOrdersList

Gets list of Cash Income Orders. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

[Token] is necessary.

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1. Example: get transfers by document number =3 and currencu=USD - "[Document number]=N'3' AND [Currency]=N'USD'"

"sort": Use SQL ORDER BY string with field names. Example: "[Payer]"

"pageNumber" records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list of Cash Income Orders.

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "filter": "[ViewOA_CashIncomeOrders].[Has entries]=1",
  "sort": "[Amount] DESC",
  "pageNumber": 2
}

```

"receiverID": See [DebitorCreditorList] method (use [OA_DebitorCreditorID] value).

"status": See [StatusList] method (use [Name] value).

"createAccountingEntries": Creates accounting entries using managerial information. Default=false

Examples

1. Update Cash Out Lay Order - with OA_TransactionsID - 5126, amount – 456, costCentreName – New cost center and currency – GEL.

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "oA_TransactionsID": 5126,
  "amount": 456,
  "costCentreName": "New cost center",
  "currency": "GEL"
}
```

Server response Code(200):

```
{
  "id": 5126,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_TransactionsID = 51267",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Transaction",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/CashOutLayOrder

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [Login] response value

"oA_TransactionsID":

Examples

1. Delete Cash Out Lay Order - with specified OA_TransactionsID – 5126.

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "oA_TransactionsID": 5126
}
```

Server response Code(200):

```
{
  "id": 5126,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

CashOutLayOrdersList

POST/api/CashOutLayOrdersList

Gets list of Out Lay Orders. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

[Token] is necessary.

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1. Example: get transfers by document number =3 and currencu=USD - "[Document number]=N'3' AND [Currency]=N'USD'"

"sort": Use SQL ORDER BY string with field names. Example: "[Receiver]"

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list of Out Lay Orders.

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "filter": "[ViewOA_CashOutlayOrders].[Amount]>=23",
  "sort": "[Amount]",
  "pageNumber": 1
}

```

Server response Code(200):

Accounting – Results

BalancesList

POST/api/BalancesList

Gets balances by chart of accounts. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "currenciesIDs": "string",
  "costCentreIDs": "string",
  "costUnitIDs": "string",
  "date": "2023-05-04T13:05:57.688Z",
  "showZeroResults": true,
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

[Token] and [Date] is necessary.

"token": Set [token] string from [LogIn] response value

"currenciesIDs": Currency ID or "0" - Consolidate in register currency or "-1" - Consolidate in second register currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Default="1", if license is [Singlecurrency] or ="0", otherwise.

"costCentreIDs": Comma separated cost centre IDs or "" - All cost centres. See [CostCentresList] method (use [OA_CostCentreID] value). Default=""

"costUnitIDs": Comma separated cost unit IDs or "" - All cost units. See [CostUnitsList] method (use [OA_CostUnitID] value). Default=""

"date": Date of balance (including date).

"showZeroResults": If false - removes rows with **zero** values from the list of results. Default=false.

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1. Example: get account by ID=123 - "[OA_AccountsID]=123" or get accounts whose numbers start with 11 and level is 2 - "[Account] LIKE N'11%' AND [Level]=2"

"sort": Use SQL ORDER BY string with field names. Example: "[Account],[Name]"

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get balances by date 2021-12-31 by chart of accounts.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "date": "2021-12-31T08:47:31.358Z",
  "topRecordsCount": 2,
  "pageNumber": 1
}
```

Server response Code(200):

```

```

TurnoverList

POST/api/TurnoverList

Gets turnover by chart of accounts. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "currenciesIDs": "string",
  "costCentreIDs": "string",
  "costUnitIDs": "string",
  "diapazonStartDate": "2023-05-10T12:21:14.393Z",
  "diapazonEndDate": "2023-05-10T12:21:14.393Z",
  "showZeroResults": true,
  "includeInternalTurns": true,
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

[Token],[DiapazonStartDate] and [DiapazonEndDate] is necessary.

"token": Set [token] string from [LogIn] response value

"currenciesIDs": Currency ID or "0" - Consolidate in register currency or "-1" - Consolidate in second register currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Default="1", if license is [Singlecurrency] or ="0", otherwise.

"costCentreIDs": Comma separated cost centre IDs or "" - All cost centres. See [CostCentresList] method (use [OA_CostCentreID] value). Default=""

"costUnitIDs": Comma separated cost unit IDs or "" - All cost units. See [CostUnitsList] method (use [OA_CostUnitID] value). Default=""

"diapazonStartDate": Start date of turnover.

"diapazonEndDate": End date of turnover (to). Example: Period of 2010 year specify - "DiapazonStartDate":"2010-01-01", "DiapazonEndDate":"2011-01-01"

"showZeroResults": If false - removes rows with zero values from the list of results. Default=false.

"includeInternalTurns":

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1. Example: get account by ID=123 - "[OA_AccountsID]=123" or get accounts whose numbers start with 11 and level is 2 - "[Account] LIKE N'11%' AND [Level]=2"

"sort": Use SQL ORDER BY string with field names. Example: "[Account],[Name]"

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get turnover by chart of accounts.

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "diapazonStartDate": "2021-01-01T13:24:45.332Z",
  "diapazonEndDate": "2022-01-01T13:24:45.332Z",
  "topRecordsCount": 2,
  "filter": "UPPER([ViewTurnover].[Account]) LIKE N'%2%'",
  "sort": "[Level] DESC",
  "pageNumber": 1
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 176,

    }
  ]
}
```

AccountBalancesList

POST/api/AccountBalancesList

Gets one account balances. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "date": "2023-05-04T12:24:22.799Z",
  "account": "string",
  "showZeroResults": true,
  "topRecordsCount": 0,
  "reportType": 0,
  "showResultsInSaleUnit": true
}
```

Field description

[Token],[Date] and [Account] is necessary.

"token": Set [token] string from [LogIn] response value

"date": Date of balance (including date).

"account": The account for which you want to receive a statement. See [AccountsList] method (use [Account] value).

"showZeroResults": If false - removes rows with **zero** values from the list of results. Default=false.

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"reportType": Report type. 0-Expanded, 1-Compressed. Default=0.

"showResultsInSaleUnit": Show stock balances in item sale unit. Default=False.

Examples

1. Get "1210 1" account balances

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "date": "2021-12-31T12:04:24.288Z",
  "account": "1210 1",
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_AccountsID": 216,

      "Category": 0,
      "OA_CostCentreID": 2,
      "OA_CostUnitID": 2,
      "OA_CurrenciesID": 2,
      "Cost centre": "New cost center",
      "Cost unit": "New cost unit",
      "Debit balance": 100.0,
      "Currency": "USD",
      "Stock balance": 0.0,
    }
  ]
}
```

```
"Debit equivalent": 270.94,
"Debit equivalent2": 100.0,
"HasResult": true
}
]
}
```

AccountStatementList

POST/api/AccountStatementList

Gets account statement. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "currenciesIDs": "string",
  "costCentreIDs": "string",
  "costUnitIDs": "string",
  "diapazonStartDate": "2023-05-04T12:51:04.408Z",
  "diapazonEndDate": "2023-05-04T12:51:04.408Z",
  "account": "string",
  "topRecordsCount": 0,
  "pageNumber": 0
}
```

Field description

[Token],[DiapazonStartDate],[DiapazonEndDate] and [Account] is necessary.

"token": Set [token] string from [LogIn] response value

"currenciesIDs": Currency ID or "0" - Consolidate in register currency or "-1" - Consolidate in second register currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Default="1", if license is [Singlecurrency] or ="0", otherwise.

"costCentreIDs": Comma separated cost centre IDs or "" - All cost centres. See [CostCentresList] method (use [OA_CostCentreID] value). Default=""

"costUnitIDs": Comma separated cost unit IDs or "" - All cost units. See [CostUnitsList] method (use [OA_CostUnitID] value). Default=""

"diapazonStartDate": Diapazon start date.

"diapazonEndDate": Diapazon end date (to). Example: Period of 2010 year specify - "DiapazonStartDate":"2010-01-01", "DiapazonEndDate":"2011-01-01"

"account": The account for which you want to receive a statement. See [AccountsList] method (use [Account] value).

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get account statement

Request body:

Server response Code(200):

AccountStatementDetailedList

POST/api/AccountStatementDetailedList

Gets account statement detailed. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "currenciesIDs": "string",
  "costCentreIDs": "string",

```

```

"costUnitIDs": "string",
"diapazonStartDate": "2023-05-04T12:41:21.695Z",

CashflowsList

POST/api/CashflowsList

Gets cashflow. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "currenciesIDs": "string",
  "costCentreIDs": "string",
  "costUnitIDs": "string",
  "diapazonStartDate": "2023-05-08T07:39:17.623Z",
  "diapazonEndDate": "2023-05-08T07:39:17.623Z",
  "showZeroResults": true,
  "reportType": 0,
  "topRecordsCount": 0,
  "pageNumber": 0
}

```

Field description

[Token],[DiapazonStartDate] and [DiapazonEndDate] is necessary.

"token": Set [token] string from [LogIn] response value

"currenciesIDs": Currency ID or "0" - Consolidate in register currency or "-1" - Consolidate in second register currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Default="1", if license is [Singlecurrency] or ="0", otherwise.

"costCentreIDs": Comma separated cost centre IDs or "" - All cost centres. See [CostCentresList] method (use [OA_CostCentreID] value). Default=""

"costUnitIDs": Comma separated cost unit IDs or "" - All cost units. See [CostUnitsList] method (use [OA_CostUnitID] value). Default=""

"diapazonStartDate": Diapazon start date.

"diapazonEndDate": Diapazon end date (to). Example: Period of 2010 year specify - "DiapazonStartDate":"2010-01-01", "DiapazonEndDate":"2011-01-01"

"showZeroResults": If false - removes rows with **zero** values from the list of results. Default=false.

"reportType": Report type: Expended = 0, Compressed = 1

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get cashflow.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "diapazonStartDate": "2021-01-01T11:46:57.445Z",
  "diapazonEndDate": "2022-01-01T11:46:57.445Z"
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 19,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "Level": 0,
      "Leaf": false,

      "Total": 101370.94
    }
  ]
}
```

MemorialList

POST/api/MemorialList

Gets memorial. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "currenciesIDs": "string",
  "costCentrelDs": "string",
  "costUnitIDs": "string",
  "diapazonStartDate": "2023-05-10T11:05:36.227Z",
  "diapazonEndDate": "2023-05-10T11:05:36.227Z",
  "memorial": 0,
}
```

```
"level": 0,
"topRecordsCount": 0,
"pageNumber": 0
}
```

Field description

[Token],[DiapazonStartDate] and [DiapazonEndDate] is necessary.

"**token**": Set [token] string from [LogIn] response value

"**currenciesIDs**": Currency ID or "0" - Consolidate in register currency or "-1" - Consolidate in second register currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Default="1", if license is [Singlecurrency] or ="0", otherwise.

"**costCentreIDs**": Comma separated cost centre IDs or "" - All cost centres. See [CostCentresList] method (use [OA_CostCentreID] value). Default=""

"**costUnitIDs**": Comma separated cost unit IDs or "" - All cost units. See [CostUnitsList] method (use [OA_CostUnitID] value). Default=""

"**diapazonStartDate**": Diapazon start date.

"**diapazonEndDate**": Diapazon end date (to). Example: Period of 2010 year specify - "DiapazonStartDate":"2010-01-01", "DiapazonEndDate":"2011-01-01"

"**memorial**": The number for which you want to receive a memorial.

"**level**": Account level for which you want to receive a memorial.

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get memorial.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "diapazonStartDate": "2021-01-01T13:25:12.868Z",
  "diapazonEndDate": "2023-05-31T13:25:12.868Z",
  "memorial": 2
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "DebitAccountID": 1,
      "CreditAccountID": 1,
      "Debit": "1000 - Carrent assets",
      "Credit": "1000 - Carrent assets",
      "Amount": 1000.0,
      "Memorial Level": 0,
      "Memorial": 2
    }
  ]
}
```

DebitorCreditorBalancesList

POST/api/DebitorCreditorBalancesList

Gets debitor/creditor balances. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "currenciesIDs": "string",
  "costCentreIDs": "string",
  "costUnitIDs": "string",
  "date": "2023-05-08T12:14:46.398Z",
  "showZeroResults": true,
  "parentAccounts": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

[Token] and [Date] is necessary.

"token": Set [token] string from [LogIn] response value

"currenciesIDs": Currency ID or "0" - Consolidate in register currency or "-1" - Consolidate in second register currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Default="1", if license is [Singlecurrency] or ="0", otherwise.

"costCentreIDs": Comma separated cost centre IDs or "" - All cost centres. See [CostCentresList] method (use [OA_CostCentreID] value). Default=""

"costUnitIDs": Comma separated cost unit IDs or "" - All cost units. See [CostUnitsList] method (use [OA_CostUnitID] value). Default=""

"date": Date of balance (including date).

"showZeroResults": If false - removes rows with zero values from the list of results. Default=false.

"parentAccounts": Comma separated parent accounts for which you want to receive a balances.

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get debtor/creditor balances.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "date": "2021-12-31T12:13:28.810Z"
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 16,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_DebitorCreditorID": 2,
      "Code": "2",
      "Name": "Person333",
      "Is person": true,
      "Address": "",
      "Zip": "",
      "Comment": "",
      "Clock number": "",
      "Is foreigner": false,
      "VAT type": 0,
      "Debit balance": 100.0,
      "HasResult": true
    }
  ]
}
```

```
}  
]  
}
```

DebitorCreditorTurnoverList

POST/api/DebitorCreditorTurnoverList

Gets debtor/creditor turnover. Returns [Info] and [Result] tables.

Schema

```
{  
  "token": "string",  
  "currenciesIDs": "string",  
  "costCentreIDs": "string",  
  "costUnitIDs": "string",  
  "diapazonStartDate": "2023-05-08T12:58:27.651Z",  
  "diapazonEndDate": "2023-05-08T12:58:27.651Z",  
  "showZeroResults": true,  
  "compressed": true,  
  "topRecordsCount": 0,  
  "filter": "string",  
  "sort": "string",  
  "pageNumber": 0  
}
```

Field description

[Token],[DiapazonStartDate] and [DiapazonEndDate] is necessary.

"token": Set [token] string from [LogIn] response value

"currenciesIDs": Currency ID or "0" - Consolidate in register currency or "-1" - Consolidate in second register currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Default="1", if license is [Singlecurrency] or ="0", otherwise.

"costCentreIDs": Comma separated cost centre IDs or "" - All cost centres. See [CostCentresList] method (use [OA_CostCentreID] value). Default=""

TransactionsList

POST/api/TransactionsList

Gets list of transactions. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "diapazonStartDate": "2023-05-10T11:52:43.087Z",
  "diapazonEndDate": "2023-05-10T11:52:43.087Z",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

[Token],[DiapazonStartDate] and [DiapazonEndDate] is necessary.

"token": Set [token] string from [LogIn] response value

"diapazonStartDate": Diapazon start date.

"diapazonEndDate": Diapazon end date (to). Example: Period of 2010 year specify - "DiapazonStartDate":"2010-01-01", "DiapazonEndDate":"2011-01-01"

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1. Example: get transactions where Delay is false and OA_TransactionTypesID =16 - "[Delay]=0 AND [OA_TransactionTypesID]=16"

"sort": Use SQL ORDER BY string with field names. Example: "[Amount]"

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list of transactions.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "diapazonStartDate": "2023-05-16T13:18:19.141Z",
  "diapazonEndDate": "2023-05-20T13:18:19.141Z",
  "topRecordsCount": 2,
  "filter": "UPPER([ViewOA_Transactions].[Document number]) LIKE N'%1%'",
  "sort": "[Transaction date] DESC",
  "pageNumber": 1
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 0,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 1
    }
  ],
  "Result": [
    {

DualEntriesList

POST/api/DualEntriesList

Gets list of entries in dual entries style. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "diapazonStartDate": "2023-05-08T13:10:43.212Z",
  "diapazonEndDate": "2023-05-08T13:10:43.212Z",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

[Token],[DiapazonStartDate] and [DiapazonEndDate] is necessary.

"token":

"diapazonStartDate": Diapazon start date.

"diapazonEndDate": Diapazon end date (to). Example: Period of 2010 year specify - "DiapazonStartDate":"2010-01-01", "DiapazonEndDate":"2011-01-01"

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list of entries in dual entries style.

Request body:

```
{

  }
]
}

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"costCentreName": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"currency": See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified. If omitted, gets first register currency from parameters.

"documentComment":

"documentDate": Sets operation date. If not specified - sets current date.

"documentNumber":

"isRateFixed":

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreName] property specified. If omitted, gets cost centre from parameters.

"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currency] property specified. If omitted, gets first register currency from parameters.

"oA_SalePriceTypesID": See [SalePriceTypesList] method (use [oA_SalePriceTypesID] value). Can be omitted if [SalePriceType] property specified.

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.

"rate": Sets the currency rate. If not specified, gets the rate by [DocumentDate]. See [CurrencyRatesList]

"receiverAddress":

"receiverBankAccount":

"receiverBankCode":

"receiverBankID": See [BanksList] method (use [OA_BanksID] value).

"receiverCode":

"receiverID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID]).

"salePriceType": See [SalePriceTypesList] method (use [description] value). Can be omitted if [OA_SalePriceTypesID] property specified.

"status": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.

"supplierAddress": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

"supplierBankAccount": See [Owner] method (use [Account] value from [OwnerBankAccounts]).

"supplierBankCode": See [Owner] method (use [BankCode] value from [OwnerBankAccounts]).

"supplierBankID": See [Owner] method (use [OA_OwnerBankAccountsID] value from [OwnerBankAccounts]).

"supplierBankName":

"supplierCode": See [Owner] method (use [Code] value from [OwnerBankAccounts]).

"proformaInvoiceItems": ProformaInvoiceItemAdd

"code": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.

"oA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.

"quantity":

"unit": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item register minimum unit.

"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"price": If omitted, calculated as [Amount]/[Quantity]

"amount": If omitted, calculated as [Quantity]*[Price]

"vatRate": If not specified, depends on [vatType] values of [Item], [Receiver] and [owner] (See [GetItemByID], [GetDebitorCreditorByID] and [Owner] methods)

"vat": If omitted, calculated as [Amount]*[VATRate]/100

"exciseRate": If not specified, gets from [exciseRate] value of [Item] object (See [GetItemByID] method)

"excise": If omitted, calculated as [Quantity]*[ExciseRate]

"quantityInRegisterUnit": Required if [hasDoubleRegisterUnit] is true for the [Item] object

"costCentre": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

Examples

1. Add proforma invoice.

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "receiverBankID": 1,
  "receiverCode": "1",
  "receiverID": 2,
  "proformaInvoiceItems": [
    {
      "code": "1",
      "oA_ItemsID": 1,
      "oA_StockUnitsID": 1,
      "price": 5
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 2005,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51111,
    "description": "Item does not exist!",
    "comment": "[11] Record is not in table or user have no permissions to read this record.\n Entry number [1]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "ProformaInvoices",
    "entryPoint": "SetItem",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/ProformaInvoice

Updates Proforma Invoice. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0,
  "costCentreName": "string",

  }
]
}

```

Field description

[Token] and [OA_TransactionsID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

"costCentreName": See [CostCentresList] method (use [Name] value).

"currency": See [CurrenciesList] method (use [Currency] value).

"documentComment":

"documentDate": Sets operation date.

"documentNumber":

"isRateFixed":

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value).

"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value).

"oA_SalePriceTypesID": See [SalePriceTypesList] method (use [oA_SalePriceTypesID] value).

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value).

"rate": Sets the currency rate.

"receiverAddress":

"receiverBankAccount":

"receiverBankCode":

"receiverBankID": See [BanksList] method (use [OA_BanksID] value).

"receiverCode":

"receiverID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID]).

"salePriceType": See [SalePriceTypesList] method (use [description] value).

"status": See [StatusesList] method (use [Name] value).

"supplierAddress": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

"supplierBankAccount": See [Owner] method (use [Account] value from [OwnerBankAccounts]).

"supplierBankCode": See [Owner] method (use [BankCode] value from [OwnerBankAccounts]).

"supplierBankID": See [Owner] method (use [OA_OwnerBankAccountsID] value from [OwnerBankAccounts]).

"supplierBankName":

"supplierCode": "string", See [Owner] method (use [Code] value from [OwnerBankAccounts]).

"clearItems": Clears all items for the operation.

"**proformaInvoiceItems**": Set OA_ManagerialEntriesID=0 to add a new Item specification. Specify the OA_ManagerialEntriesID value to update information about Item fields. To delete existing row, specify the value OA_ManagerialEntriesID and set "DeleteRow"=true.

"**oA_ManagerialEntriesID**": Specify an existing OA_ManagerialEntriesID to update or remove Item information, or 0 to add a new Item.

"**deleteRow**": If true, deletes Item information for specified OA_ManagerialEntriesID value.

"**code**": See [ItemsList] method (use [Code] value).

"**oA_ItemsID**": See [ItemsList] method (use [OA_ItemsID] value).

"**quantity**":

"**unit**": See [StockUnitsList] method (use [OA_StockUnitsID] value).

"**oA_StockUnitsID**": See [StockUnitsList] method (use [OA_StockUnitsID] value).

"**price**":

"**amount**":

"**vatRate**":

"**vat**":

"**exciseRate**":

"**excise**":

"**quantityInRegisterUnit**":

"**costCentre**": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

Examples

1. Update Proforma Invoice of "receiverID" - 2

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "oA_TransactionsID": 2005,
  "receiverBankID": 1,
  "receiverCode": "1",
  "receiverID": 2,
  "proformaInvoiceItems": [
    {
      "code": "2",
      "oA_ItemsID": 1,
      "oA_StockUnitsID": 1,
      "price": 5
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 2005,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51111,
    "description": "Item does not exist!",
    "comment": "[222] Record is not in table or user have no permissions to read this record.\nOA_TransactionsID [2005] Entry number [4]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "ProformaInvoices",
    "entryPoint": "SetItem",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/ProformaInvoice
Returns OK or Error description Json.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"**token**": Set [token] string from [LogIn] response value
"**oA_TransactionsID**":

Examples

1. Delete Proforma Invoice

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_TransactionsID": 2005  
}
```

Server response Code(200):

```
{  
  "id": 2005,  
  "idFieldName": "OA_TransactionsID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51051,  
    "description": "Record does not exist or read prohibited for user!",  
    "comment": "OA_TransactionsID = 205",  
    "command": "",  
    "errorType": "ErrorType_Error",  
    "source": "OA_BusinessObject.dll",  
    "class": "ProformaInvoices",  
    "entryPoint": "GetProperties",  
    "resourceDLL_ForTranslation": "ORIS_Accounting",  
    "errorPointer": 0  
  }  
]
```

GetProformaInvoiceByID

POST/api/GetProformaInvoiceByID

Gets Proforma Invoice and its Items by OA_TransactionsID value

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary

"**token**": Set [token] string from [LogIn] response value

"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value)

Examples

1. Get Proforma Invoice and its Items by "OA_TransactionsID" -2005

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "oA_TransactionsID": 2005
}
```

Server response Code(200):

```
{
  "oA_TransactionsID": 2005,

ProformaInvoicesList

POST/api/ProformaInvoicesList

Gets Proforma Invoices. Returns [Info] and [Result] tables

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"**token**": Set [token] string from [LogIn] response value

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"**sort**": Use SQL ORDER BY string with field names.

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list from Currency – GEL

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",

```

```
"topRecordsCount": 1,
"filter": "UPPER([ViewOA_ProformaInvoices].[Currency]) LIKE N'GEL%'",
"sort": "[Amount],[Currency]",
"pageNumber": 1
}
```

Server response Code(200):

Field description

[Token] is necessary. Specify only those fields that you want to fill.

“token”: Set [token] string from [LogIn] response value

“CostCentreName”: See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If ommitte, gets cost centre from parameters.

“Currency”: See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified. If ommitte, gets firts register currency from parameters.

“documentComment”

“documentDate”: Sets operation date. If not specified - sets current date.

“DocumentNumber”: Sets the transaction document number. If not specified, sets a unique number in the current year.

“dueDate”

“incomesAccountForFreeAccept”: See [AccountsList] method (use [Account] value). Can be omitted if [OA_IncomesAccountForFreeAcceptID] property specified. If both are omitted, gets the account from the parameters.

“isRateFixed”: Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.

“OA_CostCentreID”: See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreName] property specified. If ommitte, gets cost centre from parameters.

“OA_CurrenciesID”: See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currency] property specified. If ommitte, gets firts register currency from parameters.

“OA_IncomesAccountForFreeAcceptID”: ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [incomesAccountForFreeAccept] property specified. If both are omitted, gets the account from the parameters.

“OA_ParentAccountForSellerID”: ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [parentAccountForSeller] property specified. If both are omitted, gets the account from the parameters.

“OA_PayedExciseAccountID”: ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [payedExciseAccount] property specified. If both are omitted, gets the account from the parameters.

“OA_PayedVATAccountID”: ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [payedVATAccount] property specified. If both are omitted, gets the account from the parameters.

“OA_StatusID”: See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.

“parentAccountForSeller”: See [AccountsList] method (use [Account] value). Can be omitted if [OA_ParentAccountForSellerID] property specified. If both are omitted, gets the account from the parameters.

PayedExciseAccount: See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayedExciseAccountID] property specified. If both are omitted, gets the account from the parameters.

“payedVATAccount”: See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayedVATAccountID] property specified. If both are omitted, gets the account from the parameters.

“Rate”: Sets the currency rate. If not specified, gets the rate by [DocumentDate]. See [CurrencyRatesList]

“ReceiverAddress”: See [Owner] method (use [Address] value). Can be omitted if [ReceiverAddressesID] property specified.

“receiverAddressesID”: See [Owner] method (use [OA_OwnerAddressesID] value). Can be omitted if [ReceiverAddress] property specified.

“RS_TaxDocument_ID”: Sets Tax Document ID value recieved from revenue service

“RS_TaxDocument_Number”: Sets Tax Document number recieved from revenue service

“RS_VAT_ID”: Sets VAT ID recieved from revenue service

“RS_VAT_Number”: Sets VAT number recieved from revenue service

“RS_Waybill_ID”: Sets waybill ID recieved from revenue service

“RS_Waybill_Number”: Sets waybill number recieved from revenue service

“sellerCode”: See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [SellerID] property specified.

“SellerID”: See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [SellerCode] property specified.

“Status”: See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.

“SupplierAddress”: See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

“supplierAddressID”: See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses]).

“SupplierCode”: See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [SupplierID] property specified.

“supplierID”: See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [SupplierCode] property specified.

“**CreateAccountingEntries**”: Creates accounting entries using managerial information. Default=false

“**acceptOperationItems**”: AcceptOperationItemAdd

“**Code**”: See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.

“**OA_ItemsID**”: See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.

“**Quantity**”

“**Unit**”: See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item register minimum unit.

“**OA_StockUnitsID**”: See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

“**price**”: If omitted, calculated as [Amount]/[Quantity]

“**Amount**”: If omitted, calculated as [Quantity]*[Price]

“**vatRate**”: If not specified, depends on [vatType] values of [Item], [Buyer] and [owner] (See [GetItemByID], [GetDebtorCreditorByID] and [Owner] methods)

“**Vat**”: If omitted, calculated as [Amount]*[VATRate]/100

“**exciseRate**”: If not specified, gets from [exciseRate] value of [Item] object (See [GetItemByID] method)

“**excise**”: If omitted, calculated as [Quantity]*[ExciseRate]

“**quantityInRegisterUnit**”: Required if [hasDoubleRegisterUnit] is true for the [Item] object

“**supplierItemCode**”

“**supplierItemName**”

“**supplierItemUnit**”

“**isInvoiceExpense**”: Set to true if [Item] is a service and you want to allocate the amount value to bill items as expenses. Fill [AcceptOperationInvoiceExpensesSharingItems] for which records the expense amount should be shared.

“**OA_AccountsID**”: If not specified, gets from [oA_AccountsID] value of [Item] object (See [GetItemByID] method)

“**registerParentAccount**”: If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

“**supplierItemVATType**”: Standard = 0, ZeroRate = 1, Untaxed = 2

“**freeAccept**”

“**costCentre**”: See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

“**OA_CostCentreID**”: See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

“**acceptOperationInvoiceExpensesSharingItems**”: AcceptOperationInvoiceExpensesSharingItemAdd

“**OA_EntriesID**”: Specify the value of the accounting entry ID that belongs to the accept or other invoice, and the account type in entry is the [item] (commodity or fixed asset, not a service). For get an invoice transaction see [GetTransactionByID] method and use [OA_EntriesID] value from [TransactionEntries].

“**expenseAmount**”: Expense amount

“**managerialEntrySequenceNumber**”: Specify the SequenceNumber of the managerial entry that belongs to the current accept operation, and the item is commodity or fixed asset, not a service.

Examples

1. Adds new Accept Operation

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "sellerID": 1,
  "createAccountingEntries": true,
  "acceptOperationItems": [
    {
      "oA_ItemsID": 1,
      "quantity": 5,
      "price": 1,
      "registerParentAccount": "1610"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 190,
  "idFieldName": "Oa_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51038,
    "description": "Account is closed!",
    "comment": "Account [1610 1] 1 \nUncheck close check box for this account and resume or cancel transaction\nOA_AccountisID=262\nOA_TransactionsID [2010]\nDocument number [30]\nDate[10.05.2023 00:00:00]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Transaction",
    "entryPoint": "PostUpdateActionStagel",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

2. Adds new Accept Operation with sharing expense cost.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "sellerID": 1,
  "createAccountingEntries": true,
  "acceptOperationItems": [
    {
      "oA_ItemsID": 1,
      "quantity": 5,
      "price": 100,
      "registerParentAccount": "1610"
    },
    {
      "oA_ItemsID": 4005,
      "unit": "Service",
      "amount": 100,
      "isInvoiceExpense": true
    }
  ],
  "acceptOperationInvoiceExpensesSharingItems": [
    {
      "oA_EntriesID": 4211,
      "expenseAmount": 84.75,
      "managerialEntrySequenceNumber": 1
    }
  ]
}
```

Put/api/AcceptOperation

Updates Existing Accept Operation. Returns OK or Error description Json.

Schema

```

Field description

[Token] and [OA_TransactionsID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"OA_TransactionsID": ,

"costCentreName": See [CostCentresList] method (use [Name] value),

"currency": See [CurrenciesList] method (use [Currency] value).

"documentComment"

"documentDate": Sets operation date.

"documentNumber"

"dueDate"

"incomesAccountForFreeAccept": See [AccountsList] method (use [Account] value).

"isRateFixed": Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.

"OA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value).

"OA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value).

"OA_IncomesAccountForFreeAcceptID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"OA_ParentAccountForSellerID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value)

"OA_PayedExciseAccountID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"OA_PayedVATAccountID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"OA_StatusID": See [StatusesList] method (use [OA_StatusID] value).

"parentAccountForSeller": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ParentAccountForSellerID] property specified. If both are omitted, gets the account from the parameters.

"payedExciseAccount": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayedExciseAccountID] property specified. If both are omitted, gets the account from the parameters.

"payedVATAccount": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayedVATAccountID] property specified. If both are omitted, gets the account from the parameters.

"rate": Sets the currency rate.

"receiverAddress": See [Owner] method (use [Address] value or [address] value from [OwnerAddresses]).

"receiverAddressesID": See [Owner] method (use [OA_OwnerAddressesID] value from [OwnerAddresses]).

"rs_TaxDocument_ID": Sets Tax Document ID value recieved from revenue service

"rs_TaxDocument_Number": Sets Tax Document number recieved from revenue service

"rs_VAT_ID": Sets VAT ID recieved from revenue service

"rs_VAT_Number": Sets VAT number recieved from revenue service

"rs_Waybill_ID": Sets waybill ID recieved from revenue service

"rs_Waybill_Number": Sets waybill number recieved from revenue service

"sellerCode": See [DebitorCreditorsList] method (use [Code] value).

"sellerID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value)

"status": See [StatusesList] method (use [Name] value)

"supplierAddress": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

"supplierAddressID": See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses]).

"supplierCode": See [DebitorCreditorsList] method (use [Code] value).

"supplierID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value)

"createAccountingEntries": Creates accounting entries using managerial information. Default=false

"clearItems": Clears all items for the operation.

"clearInvExpenses": Clears all Invoice Expenses for the operation.

"acceptOperationItems": Set OA_ManagerialEntriesID=0 to add a new Item specification. Specify the OA_ManagerialEntriesID value to update information about Item fields. To delete existing row, specify the value OA_ManagerialEntriesID and set "DeleteRow"=true

"OA_ManagerialEntriesID": Specify an existing OA_ManagerialEntriesID to update or remove Item information, or 0 to add a new Item.

"deleteRow": If true, deletes Item information for specified OA_ManagerialEntriesID value.

"code": See [ItemsList] method (use [Code] value).

"OA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value).

"quantity":

"unit": See [StockUnitsList] method (use [Unit] value).

"OA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value).

"price":

"amount":

"vatRate":

"vat":

"exciseRate":

"excise":

"quantityInRegisterUnit":

"supplierItemCode":

"supplierItemName":

"supplierItemUnit":

"isInvoiceExpense": Set to true if [Item] is a service and you want to allocate the amount value to bill items as expenses. Fill [AcceptOperationInvoiceExpensesSharingItems] for which records the expense amount should be shared.

"OA_AccountsID":

"registerParentAccount":

"supplierItemVATType": Standard = 0, ZeroRate = 1, Untaxed = 2

"freeAccept":

"costCentre": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If ommite, gets cost centre from parameters.

"OA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If ommite, gets cost centre from parameters.

"acceptOperationInvoiceExpensesSharingItems": Set OA_InvoiceExpensesItemsID=0 to add a new Invoice Expenses specification. Specify the OA_InvoiceExpensesItemsID value to update information about Invoice Expenses fields. To delete existing row, specify the value OA_InvoiceExpensesItemsID and set "DeleteRow"=true.

"OA_InvoiceExpensesItemsID": Specify an existing OA_InvoiceExpensesItemsID to update or remove Invoice Expenses information, or 0 to add a new Invoice Expense.

"deleteRow": If true, deletes Invoice Expenses information for specified OA_InvoiceExpensesItemsID value.

"OA_EntriesID": Specify the value of the accounting entry ID that belongs to the accept or other invoice, and the account type in entry is the [item] (commodity or fixed asset, not a service). For get an invoice transaction see [GetTransactionByID] method and use [OA_EntriesID] value from [TransactionEntry].

"expenseAmount": Expense amount

"managerialEntrySequenceNumber": Specify the SequenceNumber of the managerial entry that belongs to the current accept operation, and the item is commodity or fixed asset, not a service.

Examples

1. Update quantity with "OA_TransactionID" - 40

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 40,
  "sellerID": 1,
  "createAccountingEntries": true,
  "acceptOperationItems": [
    {
      "oA_ItemsID": 1,
      "quantity": 5,
      "price": 3,
      "registerParentAccount": "1610"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 40,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51067,
    "description": "Can not change/delete data when transaction has been documental confirmed!",
    "comment": "For change/delete data first remove documental confirm.\noA_TransactionsID= 40",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Transaction",
    "entryPoint": "CheckDocumentalConfirm",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
],
```

]

2. **Update** AcceptOperationInvoiceExpensesSharingItem with registerParentAccount "1620"
Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "oA_TransactionsID":5130,
  "sellerID": 1,
  "createAccountingEntries": true,
  "acceptOperationItems": [
    {
      "oA_ItemsID": 1,
      "quantity": 5,
      "price": 100,
      "registerParentAccount":"1620"
    },
    {
      "oA_ItemsID": 4005,
      "unit": "Service",
      "amount": 100,
      "isInvoiceExpense": true
    }
  ],
  "acceptOperationInvoiceExpensesSharingItems": [
    {
      "oA_EntriesID": 4211,
      "expenseAmount": 84.75,
      "managerialEntrySequenceNumber": 1
    }
  ]
}
```

DELETE/api/AcceptOperation

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [Login] response value
"oA_TransactionsID":

Examples

1. Delete account with "OA_TransactionsID" - 40.
Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "oA_TransactionsID": 40
}
```

Server response Code(200):

```
{
  "id": 40,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

[

```
{
  "errorNumber": 51067,
  "description": "Can not change/delete data when transaction has been documental confirmed!",
  "comment": "For change/delete data first remove documental confirm.\nOA_TransactionsID= 40",
  "command": "",
  "errorType": "ErrorType_Error",
  "source": "OA_BusinessObject.dll",
  "class": "Transaction",
  "entryPoint": "CheckDocumentalConfirm",
  "resourceDLL_ForTranslation": "ORIS_Accounting",
  "errorPointer": 0
}
```

2. Delete Accept Operation using "oA_TransactionsID" - 3350
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3350
}
```

GetAcceptOperationByID

POST/api/GetAcceptOperationByID

Gets Accept Operation and its Items and Invoice Expenses by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value)

Examples

1. Get Accept Operation and its Items by "OA_TransactionsID" - 2007
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 2007
}
```

Server response Code(200):

AcceptOperationsList

POST/api /AcceptOperationsList

Gets Accept Operations. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": "string",

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first 2 accounts from database

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2,
  "filter": "UPPER([ViewOA_AcceptOperations].[Seller]) LIKE N'%ORG%'",
  "sort": "[Document date],[Document number]",
  "pageNumber": 1
}

```

Server response Code(200):

```

{

  }
]
}

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"costCentreFrom": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If ommite, gets cost centre from parameters. "

"costCentreTo": See [CostCentresList] method (use [Name] value). Can be omitted if [ToOA_CostCentreID] property specified. If ommite, gets cost centre from parameters.

"documentComment":

"documentDate": Sets operation date. If not specified - sets current date.

"documentNumber": Sets the transaction document number. If not specified, sets a unique number in the current year.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreFrom] property specified. If ommite, gets cost centre from parameters.

"oA_SalePriceTypesID": See [SalePriceTypesList] method (use [oA_SalePriceTypesID] value). Can be omitted if [SalePriceType] property specified.

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.

"rS_TaxDocument_ID": Sets Tax Document ID value recieved from revenue service

"rS_TaxDocument_Number": Sets Tax Document number recieved from revenue service

"rS_Waybill_ID": Sets waybill ID recieved from revenue service

"rS_Waybill_Number": Sets waybill number recieved from revenue service

"salePriceType": See [SalePriceTypesList] method (use [description] value). Can be omitted if [OA_SalePriceTypesID] property specified.

"status": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.

"toOA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreIDTo] value). Can be omitted if [CostCentre] property specified. If ommite, gets cost centre from parameters.

"createAccountingEntries": Creates accounting entries using managerial information. Default=false

"transferOperationItems": TransferOperationItemAdd

"code": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.

"oA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.

"quantity":

"unit": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item register minimum unit.

"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"price": If omitted, calculated as [Amount]/[Quantity]

"amount": If omitted, calculated as [Quantity]*[Price]

"costCentreFrom": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

"costCentreTo": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"toOA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

"quantityInRegisterUnit": Required if [hasDoubleRegisterUnit] is true for the [Item] object

"registerParentAccount": If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

"oA_AccountsID": If not specified, gets from [oA_AccountsID] value of [Item] object (See [GetItemByID] method)

"parentAccountForDestinationItem":

"oA_AccountsIDTo":

"rsItemCode":

"rsItemName":

"rsItemUnit":

"rsItemVATType": Standard = 0, ZeroRate = 1, Untaxed = 2

Examples

1. Add new Transfer Operation.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "costCentreFrom": "General cost center",
  "costCentreTo": "New cost center",
  "oA_CostCentreID": 1,

GetTransferOperationByID

POST/api/GetTransferOperationByID

Gets Transfer Operation and its Items by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "OA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value)

Examples

1. Get Transfer Operation by "OA_TransactionsID" - 2012

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 2012
}
```

Server response Code(200):

```
{
  "oA_TransactionsID": 2012,
  "amount": 0,
  "costCentreFrom": "General cost center",
  "costCentreTo": "New cost center",

```

TransferOperationsList

POST/api/TransferOperationsList

Gets Transfer Operations. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"**token**": Set [token] string from [LogIn] response value

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1.

"**sort**": Use SQL ORDER BY string with field names.

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Gets list of Transfer Operations.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "filter": "[ViewOA_TransferOperations].[OA_TransactionsID]>201",
  "sort": "[Document date],[Has entries],[Delay]",
  "pageNumber": 1
}
```

Server response Code(200):

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"**token**": Set [token] string from [LogIn] response value

"**buyerCode**": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [BuyerID] property specified.

"**buyerID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [BuyerCode] property specified.

"**costCentreName**": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"**currency**": See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified. If omitted, gets first register currency from parameters.

"**documentComment**":

"**documentDate**": Sets operation date. If not specified - sets current date.

"**documentNumber**":

"**dueDate**":

"**expenseAccountForFixedAssetWriteOff**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ExpenseAccountForFixedAssetWriteOffID] property specified. If both are omitted, gets the account from the parameters.

"**expenseAccountForFreeSupply**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ExpenseAccountForFreeSupplyID] property specified. If both are omitted, gets the account from the parameters.

"**expenseForWriteOffAccount**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ExpenseForWriteOffAccountsID] property specified. If both are omitted, gets the account from the parameters.

"**incomesAccountForSupply**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_IncomesAccountForSupplyID] property specified. If both are omitted, gets the account from the parameters.

"**incomesAccountForUntaxed**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_IncomesAccountForUntaxedID] property specified. If both are omitted, gets the account from the parameters.

"**incomesAccountForZeroVAT**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_IncomesAccountForZeroVATID] property specified. If both are omitted, gets the account from the parameters.

"**isRateFixed**": Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreName] property specified. If omitted, gets cost centre from parameters.

"**oA_CurrenciesID**": See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currency] property specified. If omitted, gets first register currency from parameters.

"**oA_ExpenseAccountForFixedAssetWriteOffID**": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ExpenseAccountForFixedAssetWriteOff] property specified. If both are omitted, gets the account from the parameters.

"**oA_ExpenseAccountForFreeSupplyID**": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ExpenseAccountForFreeSupply] property specified. If both are omitted, gets the account from the parameters.

"oA_ExpenseForWriteOffAccountsID": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ExpenseForWriteOffAccount] property specified. If both are omitted, gets the account from the parameters.

"oA_IncomesAccountForSupplyID": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [IncomesAccountForSupply] property specified. If both are omitted, gets the account from the parameters.

"oA_IncomesAccountForUntaxedID": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [IncomesAccountForUntaxed] property specified. If both are omitted, gets the account from the parameters.

"oA_IncomesAccountForZeroVATID": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [IncomesAccountForZeroVAT] property specified. If both are omitted, gets the account from the parameters.

"oA_ParentForBuyerAccountsID": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [OA_ParentForBuyerAccountsID] property specified. If both are omitted, gets the account from the parameters.

"oA_PayableExciseAccountsID": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [OA_PayableExciseAccountsID] property specified. If both are omitted, gets the account from the parameters.

"oA_PayableVATAccountsID": See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [OA_PayableVATAccountsID] property specified. If both are omitted, gets the account from the parameters.

"oA_SalePriceTypesID": See [SalePriceTypesList] method (use [oA_SalePriceTypesID] value). Can be omitted if [SalePriceType] property specified.

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.

"parentForBuyerAccount": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ParentForBuyerAccountsID] property specified. If both are omitted, gets the account from the parameters.

"payableExciseAccount": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayableExciseAccountsID] property specified. If both are omitted, gets the account from the parameters.

"payableVATAccount": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayableVATAccountsID] property specified. If both are omitted, gets the account from the parameters.

"rate": Sets the currency rate. If not specified, gets the rate by [DocumentDate]. See [CurrencyRatesList]

"receiverAddress": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

"receiverAddressesID": See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses]).

"receiverCode": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [ReceiverID] property specified.

"receiverID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [ReceiverCode] property specified.

"rS_TaxDocument_ID": Sets Tax Document ID value recieved from revenue service

"rS_TaxDocument_Number": Sets Tax Document number recieved from revenue service

"rS_VAT_ID": Sets VAT ID recieved from revenue service

"rS_VAT_Number": Sets VAT number recieved from revenue service

"rS_Waybill_ID": Sets waybill ID recieved from revenue service

"rS_Waybill_Number": Sets waybill number recieved from revenue service

"salePriceType": See [SalePriceTypesList] method (use [description] value). Can be omitted if [OA_SalePriceTypesID] property specified.

"status": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.

"supplierAddress": See [Owner] method (use [Address] value or [address] value from [OwnerAddresses]).

"supplierAddressesID": See [Owner] method (use [OA_OwnerAddressesID] value from [OwnerAddresses]).

"createAccountingEntries": Creates accounting entries using managerial information. Default=false

"supplyOperationItems": SupplyOperationItemAdd

"code": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.

"oA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.

"quantity":

"unit": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item sale unit.

"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item sale unit.

"price": If omitted, calculated as [Amount]/[Quantity]

"amount": If omitted, calculated as [Quantity]*[Price]

"vatRate": If not specified, depends on [vatType] values of [Item], [Buyer] and [owner] (See [GetItemByID], [GetDebitorCreditorByID] and [Owner] methods)

"vat": If omitted, calculated as [Amount]*[VATRate]/100

"exciseRate": If not specified, gets from [exciseRate] value of [Item] object (See [GetItemByID] method)

"excise": If omitted, calculated as [Quantity]*[ExciseRate]

"quantityInRegisterUnit": Required if [hasDoubleRegisterUnit] is true for the [Item] object

"rsItemCode":

"rsItemName":

"rsItemUnit":

"oA_AccountsID": If not specified, gets from [oA_AccountsID] value of [Item] object (See [GetItemByID] method)

"registerParentAccount": If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

"rsItemVATType": Standard = 0, ZeroRate = 1, Untaxed = 2

"freeSupply":

"itemSalePrice":

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

"costCentre": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"oA_AccountsIDExpenseAccount":

"itemWriteOffExpenseAccount":

Examples

1. Add new Supply Operation.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "buyerCode": "3110",
  "buyerID": 1,
  "costCentreName": "General cost center",
  "oA_CostCentreID": 1,
  "receiverCode": "1410",
  "receiverID": 2,

Examples

1. Update Supply Operation. Change registerParentAccount "1620".

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3008,
  "buyerCode": "3110",
  "buyerID": 1,
  "receiverCode": "1410",
  "receiverID": 2,
  "createAccountingEntries": true,
  "supplyOperationItems": [
    {
      "code": "1",
      "oA_ItemsID": 1,
      "oA_StockUnitsID": 1,
      "price": 5,
      "amount": 10,
      "oA_AccountsID": 1,
      "registerParentAccount": "1620",
      "itemSalePrice": 5,
      "itemWriteOffExpenseAccount": "7210"
    }
  ]
}
```

Server response Code(200):

```
{
  "id":3008,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51125,
    "description": "Add new sub account under item account is prohibited!",
    "comment": "Account [1610 1] 1610 1",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Account",
    "entryPoint": "PrepareNewProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/SupplyOperation

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_TransactionsID": 0

Examples

1. Delete SupplyOperation.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3008
}
```

Server response Code(200):

```
{
  "id": 3008,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_TransactionsID = 308",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Transaction",
    "entryPoint": "GetProperties",
  }
]
```

```
"resourceDLL_ForTranslation": "ORIS_Accounting",
"errorPointer": 0
}
]
```

GetSupplyOperationByID

POST/api/GetSupplyOperationByID

Gets Supply Operation and its Items by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value).

Examples

1. Get Supply Operation by "oA_TransactionsID" - 3008

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3008
}
```

Server response Code(200):

SupplyOperationsList

POST/api/SupplyOperationsList

Gets Supply Operations. Returns [Info] and [Result] tables

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get List Supply Operations.

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "filter": "UPPER([ViewOA_SupplyOperations].[Supplier address]) LIKE N'%AL. KAZBEGI AVE.%'",
  "sort": "[Receiver name],[Receiver code]",
  "pageNumber": 1
}

```

Server response Code(200):

```

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"costCentre": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"documentComment":

"documentDate": Sets operation date. If not specified - sets current date.

"documentNumber": Sets the transaction document number. If not specified, sets a unique number in the current year.

"expenseAccountForFixedAssetWriteOff": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ExpenseAccountForFixedAssetWriteOffID] property specified. If both are omitted, gets the account from the parameters.

"**expenseForWriteOffAccount**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ExpenseForWriteOffAccountsID] property specified. If both are omitted, gets the account from the parameters.
"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters. "oA_ExpenseAccountForFixedAssetWriteOffID": 0,
"oA_ExpenseForWriteOffAccountsID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ExpenseAccountForFixedAssetWriteOff] property specified. If both are omitted, gets the account from the parameters.
"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.
"status": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.
"createAccountingEntries": Creates accounting entries using managerial information. Default=false

"writeOffOperationItems":WriteOffOperationItemAdd

"code": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.

"oA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.

"quantity":

"unit": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item register minimum unit.

"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"quantityInRegisterUnit": Required if [hasDoubleRegisterUnit] is true for the [Item] object

"oA_AccountsID": If not specified, gets from [oA_AccountsID] value of [Item] object (See [GetItemByID] method)

"registerParentAccount": If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

"costCentre": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"oA_AccountsIDExpenseAccount":

"itemWriteOffExpenseAccount":

Examples

1. Add new Write Off Operation.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "expenseForWriteOffAccount": "7210",
  "createAccountingEntries": true,
  "writeOffOperationItems": [
    {
      "code": "1",
      "oA_ItemsID": 1,
      "quantity": 1,
      "registerParentAccount": "1610",
      "itemWriteOffExpenseAccount": "7210"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 3009,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```

"**itemWriteOffExpenseAccount**":

Examples

1. Update Write Off Operation "oA_TransactionsID" - 3009, change quantity - 2

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3009,
  "expenseForWriteOffAccount": "7210",
  "createAccountingEntries": true,
  "writeOffOperationItems": [
    {
      "code": "1",
      "oA_ItemsID": 1,
      "quantity": 2,
      "registerParentAccount": "1610",
      "itemWriteOffExpenseAccount": "7210"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 3009,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51067,
    "description": "Can not change/delete data when transaction has been documental confirmed!",
    "comment": "For change/delete data first remove documental confirm.\noA_TransactionsID= 3009",

    "errorPointer": 0
  }
]
```

DELETE/api/WriteOffOperation
Returns OK or Error description Json.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_TransactionsID":

Examples

1. Delete WriteOffOperation.

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_TransactionsID":3009  
}
```

Server response Code(200):

```
{  
  "id": 3009,  
  "idFieldName": "OA_TransactionsID"  
}
```

Server response Code(400):

```
[  
{  
  "errorNumber": 51067,  
  "description": "Can not change/delete data when transaction has been documental confirmed!",  
  "comment": "For change/delete data first remove documental confirm.\nOA_TransactionsID= 3009",

  "resourceDLL_ForTranslation": "ORIS_Accounting",  
  "errorPointer": 0  
}  
]
```

GetWriteOffOperationByID

POST/api/GetWriteOffOperationByID

Gets Write Off Operation and its Items by OA_TransactionsID value.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value)

Examples

1. Get Write Off Operation by "oA_TransactionsID" - 3009

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3009
}
```

Server response Code(200):

```
{
  "oA_TransactionsID": 3009,

WriteOffOperationsList

POST/api/WriteOffOperationsList

Gets WriteOf Operations. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get List WriteOf Operations

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "filter": "UPPER([ViewOA_WriteOffOperations].[Cost centre])=N'GENERAL COST CENTER'",
  "sort": "[OA_CostCentreID],[Document date]",
  "pageNumber": 1
}

```

Server response Code(200):

```

{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 1,
      "PageRowCount": 1,
      "PageNumber": 1
    }
  ],
  "Result": [
    {
      "OA_TransactionsID": 3009,
      "Document date": "2023-06-02T16:34:04",

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"**token**": Set [token] string from [LogIn] response value

"**costCentreName**": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"**currency**": See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified. If omitted, gets first register currency from parameters.

"**documentComment**":

"**documentDate**": Sets operation date. If not specified - sets current date.

"**documentNumber**": Sets the transaction document number. If not specified, sets a unique number in the current year.

"**dueDate**":

"**expenseAccountForFixedAssetWriteOff**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ExpenseAccountForFixedAssetWriteOffID] property specified. If both are omitted, gets the account from the parameters.

"**expenseForWriteOffAccount**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ExpenseForWriteOffAccountsID] property specified. If both are omitted, gets the account from the parameters.

"**isRateFixed**": Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreName] property specified. If omitted, gets cost centre from parameters.

"**oA_CurrenciesID**": See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currency] property specified. If omitted, gets first register currency from parameters.

"**oA_ExpenseAccountForFixedAssetWriteOffID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ExpenseAccountForFixedAssetWriteOff] property specified. If both are omitted, gets the account from the parameters.

"**oA_ExpenseForWriteOffAccountsID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ExpenseForWriteOffAccount] property specified. If both are omitted, gets the account from the parameters.

"**oA_ParentAccountOfSupplierID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ParentAccountOfSupplier] property specified. If both are omitted, gets the account from the parameters.

"**oA_PayedExciseAccountsID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [PayedExciseAccount] property specified. If both are omitted, gets the account from the parameters.

"**oA_PayedVATAccountID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [PayedVATAccount] property specified. If both are omitted, gets the account from the parameters.

"**oA_PurchasedItemReturnAccountID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [PurchasedItemReturnAccount] property specified. If both are omitted, gets the account from the parameters.

"**oA_StatusID**": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.

"**parentAccountOfSupplier**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ParentAccountOfSupplierID] property specified. If both are omitted, gets the account from the parameters.

"**payedExciseAccount**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayedExciseAccountsID] property specified. If both are omitted, gets the account from the parameters.

"**payedVATAccount**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayedVATAccountID] property specified. If both are omitted, gets the account from the parameters.

"**purchasedItemReturnAccount**": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PurchasedItemReturnAccountID] property specified. If both are omitted, gets the account from the parameters.

"**rate**": Sets the currency rate. If not specified, gets the rate by [DocumentDate]. See [CurrencyRatesList]

"**receiverAddress**": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

"**receiverAddressesID**": See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses]).

"**rS_TaxDocument_ID**": Sets Tax Document ID value recieved from revenue service

"**rS_TaxDocument_Number**": Sets Tax Document number recieved from revenue service

"**rS_VAT_ID**": Sets VAT ID recieved from revenue service

"**rS_VAT_Number**": Sets VAT number recieved from revenue service

"**rS_Waybill_ID**": Sets waybill ID recieved from revenue service

"**rS_Waybill_Number**": Sets waybill number recieved from revenue service

"**sellerCode**": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [SellerID] property specified.

"**sellerID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [SellerCode] property specified.

"**status**": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.

"**supplierAddress**": See [Owner] method (use [Address] value or [address] value from [OwnerAddresses]).

"**supplierAddressesID**": See [Owner] method (use [OA_OwnerAddressesID] value from [OwnerAddresses]).

"**supplierCode**": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [SupplierID] property specified.

"**supplierID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [SupplierCode] property specified.

"**createAccountingEntries**": Creates accounting entries using managerial information. Default=false

"**clearItems**": Clears all items for the operation.

"**returnToSupplierItems**": ReturnToSupplierItemAdd

"**code**": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified. If both are omitted, gets the Item register minimum unit.

"**oA_ItemsID**": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"**quantity**":

"**unit**": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"**oA_StockUnitsID**": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"**price**": If omitted, calculated as [Amount]/[Quantity]

"**amount**": If omitted, calculated as [Quantity]*[Price]

"**vatRate**": If not specified, depends on [vatType] values of [Item], [Seller] and [owner] (See [GetItemByID], [GetDebitorCreditorByID] and [Owner] methods)

"**vat**": If omitted, calculated as [Amount]*[VATRate]/100

"**exciseRate**": If not specified, gets from [exciseRate] value of [Item] object (See [GetItemByID] method)

"**excise**": If omitted, calculated as [Quantity]*[ExciseRate]

"**quantityInRegisterUnit**": Required if [hasDoubleRegisterUnit] is true for the [Item] object

"**supplierItemCode**":

"**supplierItemName**":

"**supplierItemUnit**":

"**oA_AccountsID**": If not specified, gets from [oA_AccountsID] value of [Item] object (See [GetItemByID] method)

"**registerParentAccount**": If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

"**supplierItemVATType**": Standard = 0, ZeroRate = 1, Untaxed = 2

"**costCentre**": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If ommite, gets cost centre from parameters.

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If ommite, gets cost centre from parameters

"**oA_AccountsIDExpenseAccount**":

"**itemWriteOffExpenseAccount**":

Examples

1. Add new Return To Supplier.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "expenseForWriteOffAccount": "7210",
  "oA_ParentAccountOfSupplierID": 1,
  "oA_PayedExciseAccountsID": 2,

Examples

1. Update Return To Supplier Change cod - 2.
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3005,
  "expenseForWriteOffAccount": "7210",
  "oA_ParentAccountOfSupplierID": 1,
  "oA_PayedExciseAccountsID": 2,
  "parentAccountOfSupplier": "1410",
  "purchasedItemReturnAccount": "1610 1",
  "supplierID": 2,
  "createAccountingEntries": true,
  "returnToSupplierItems": [
    {
      "code": "2",
      "oA_ItemsID": 1,
      "quantity": 1,
      "price": 10,
      "oA_AccountsIDExpenseAccount": 1,
      "itemWriteOffExpenseAccount": "7210"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 3005,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51111,
    "description": "Item does not exist!",
    "comment": "[5] Record is not in table or user have no permissions to read this record.\nOA_TransactionsID [3005]
Entry number [6]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "ReturnToSupplier",
    "entryPoint": "SetItem",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/ReturnToSupplier

Returns OK or Error description Json.

Schema

```
{
```

```
"token": "string",
"oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_TransactionsID":

Examples

1. Delete ReturnToSupplier.
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3005
}
```

Server response Code(200):

```
{
  "id": 3005,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_TransactionsID = 504",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Transaction",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

GetReturnToSupplierByID

POST/api/GetReturnToSupplierByID

Gets Return To Supplier and its Items by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "OA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value
"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value)

Examples

1. Get Return To Supplier by "oA_TransactionsID" - 3005
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
}
```

```
"oA_TransactionsID": 3005
}
```

ReturnToSuppliersList

POST/api/ReturnToSuppliersList

Gets .Return To Suppliers Returns [Info] and [Result] tables.

Schema

```

{
"token": "string",
"topRecordsCount": 0,
"filter": "string",
"sort": "string",
"pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get ReturnToSuppliersList.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "filter": "UPPER([ViewOA_ReturnToSupplierOperations].[Currency]) LIKE N'%GEL%'",
  "sort": "[Currency],[Supplier code]",
  "pageNumber": 1
}
```

Server response Code(200):

```
{

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"buyerCode": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [BuyerID] property specified.

"buyerID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [BuyerCode] property specified.

"costCentreName": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"currency": See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified. If omitted, gets first register currency from parameters.

"documentComment":

"documentDate": Sets operation date. If not specified - sets current date.

"documentNumber": Sets the transaction document number. If not specified, sets a unique number in the current year.

"dueDate":

"incomeAccountForEqualize": See [AccountsList] method (use [Account] value). Can be omitted if [OA_IncomeAccountForEqualizeID] property specified. If both are omitted, gets the account from the parameters.

"incomeAccountForUntaxed": See [AccountsList] method (use [Account] value). Can be omitted if [OA_IncomeAccountForUntaxedID] property specified. If both are omitted, gets the account from the parameters.

"incomeAccountForZeroVAT": See [AccountsList] method (use [Account] value). Can be omitted if [OA_IncomeAccountForZeroVATID] property specified. If both are omitted, gets the account from the parameters.

"isRateFixed": Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreName] property specified. If omitted, gets cost centre from parameters.

"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currency] property specified. If omitted, gets first register currency from parameters.

"oA_IncomeAccountForEqualizeID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [IncomeAccountForEqualize] property specified. If both are omitted, gets the account from the parameters.

"oA_IncomeAccountForUntaxedID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [IncomeAccountForUntaxed] property specified. If both are omitted, gets the account from the parameters.

"oA_IncomeAccountForZeroVATID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [IncomeAccountForZeroVAT] property specified. If both are omitted, gets the account from the parameters.

"oA_ParentAccountForBuyerID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [IncomeAccountForZeroVAT] property specified. If both are omitted, gets the account from the parameters.

"oA_PayedExciseAccountID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [PayedExciseAccount] property specified. If both are omitted, gets the account from the parameters.

"oA_PayedVATAccountID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [PayedVATAccount] property specified. If both are omitted, gets the account from the parameters.

"oA_ReturnedGoodLossAccountID": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ReturnedGoodLossAccount] property specified. If both are omitted, gets the account from the parameters.

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.

"parentAccountForBuyer": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ParentAccountForBuyerID] property specified. If both are omitted, gets the account from the parameters.

"payedExciseAccount": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayedExciseAccountID] property specified. If both are omitted, gets the account from the parameters.

"payedVATAccount": See [AccountsList] method (use [Account] value). Can be omitted if [OA_PayedVATAccountID] property specified. If both are omitted, gets the account from the parameters.

"rate": Sets the currency rate. If not specified, gets the rate by [DocumentDate]. See [CurrencyRatesList]

"receiverAddress": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

"receiverAddressID": See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses]).

"receiverCode": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [ReceiverID] property specified.

"receiverID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [ReceiverCode] property specified.

"returnedGoodLossAccount": See [AccountsList] method (use [Account] value). Can be omitted if [OA_ReturnedGoodLossAccountID] property specified. If both are omitted, gets the account from the parameters.

"rS_TaxDocument_ID": Sets Tax Document ID value recieved from revenue service

"rS_TaxDocument_Number": Sets Tax Document number recieved from revenue service

"rS_VAT_ID": Sets VAT ID recieved from revenue service

"rS_VAT_Number": Sets VAT number recieved from revenue service

"rS_Waybill_ID": Sets waybill ID recieved from revenue service

"rS_Waybill_Number": Sets waybill number recieved from revenue service

"status": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.

"supplierAddress": See [Owner] method (use [Address] value or [address] value from [OwnerAddresses]).

"supplierAddressesID": See [Owner] method (use [OA_OwnerAddressesID] value from [OwnerAddresses]).

"createAccountingEntries": Creates accounting entries using managerial information. Default=false

"returnFromCustomerItems": ReturnFromCustomerItemAdd

"code": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.

"oA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.

"quantity":

"unit": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item register minimum unit.

"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"price": If omitted, calculated as [Amount]/[Quantity]

"amount": If omitted, calculated as [Quantity]*[Price]

"vatRate": If not specified, depends on [vatType] values of [Item], [Buyer] and [owner] (See [GetItemByID], [GetDebitorCreditorByID] and [Owner] methods)

"vat": If omitted, calculated as [Amount]*[VATRate]/100

"exciseRate": If not specified, gets from [exciseRate] value of [Item] object (See [GetItemByID] method)

"excise": If omitted, calculated as [Quantity]*[ExciseRate]

"quantityInRegisterUnit": Required if [hasDoubleRegisterUnit] is true for the [Item] object

"oA_AccountsID": If not specified, gets from [oA_AccountsID] value of [Item] object (See [GetItemByID] method)

"registerParentAccount": If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

"rsItemCode":

"rsItemName":

"rsItemUnit":

"rsItemVATType": Standard = 0, ZeroRate = 1, Untaxed = 2

"costCentre": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

Examples

1. Add new Return From Customer.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "buyerCode": "1",
  "buyerID": 1,
  "parentAccountForBuyer": "1410",
  "payedExciseAccount": "3110",
  "createAccountingEntries": true,
  "returnFromCustomerItems": [
    {
      "code": "1",
      "oA_ItemsID": 1,
      "price": 100,
      "amount": 100,
      "registerParentAccount": "1610"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 3004,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51190,
    "description": "Property not found!",
    "comment": "OA_TransactionsID=0 [5]\n Buyer=[11]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "ReturnFromCustomer",
    "entryPoint": "set property",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/ReturnFromCustomer

Updates Return From Customer. Returns OK or Error description Json.

Schema

```

Field description

[Token] and [OA_TransactionsID] is necessary. Specify only those fields that you want to change.

"**token**": Set [token] string from [LogIn] response value

"**oA_TransactionsID**":

"**buyerCode**": See [DebitorCreditorsList] method (use [Code] value).

"**buyerID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value).

"**costCentreName**": See [CostCentresList] method (use [Name] value).

"**currency**": See [CurrenciesList] method (use [Currency] value).

"**documentComment**":

"**documentDate**": Sets operation date.

"**documentNumber**":

"**dueDate**":

"**incomeAccountForEqualize**": See [AccountsList] method (use [Account] value).

"**incomeAccountForUntaxed**": See [AccountsList] method (use [Account] value).

"**incomeAccountForZeroVAT**": See [AccountsList] method (use [Account] value).

"**isRateFixed**": Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value).

"**oA_CurrenciesID**": See [CurrenciesList] method (use [OA_CurrenciesID] value).

"**oA_IncomeAccountForEqualizeID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"**oA_IncomeAccountForUntaxedID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"**oA_IncomeAccountForZeroVATID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"**oA_ParentAccountForBuyerID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"**oA_PayedExciseAccountID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"**oA_PayedVATAccountID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"**oA_ReturnedGoodLossAccountID**": ID from chart of accounts. See [AccountsList] method (use [OA_AccountsID] value).

"**oA_StatusID**": See [StatusesList] method (use [OA_StatusID] value).

"**parentAccountForBuyer**": See [AccountsList] method (use [Account] value).

"**payedExciseAccount**": See [AccountsList] method (use [Account] value).

"**payedVATAccount**": See [AccountsList] method (use [Account] value).

"**rate**": Sets the currency rate.

"**receiverAddress**": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

"**receiverAddressID**": See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses]).

"**receiverCode**": See [DebitorCreditorsList] method (use [Code] value).

"**receiverID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value).

"**returnedGoodLossAccount**": See [AccountsList] method (use [Account] value).

"**rS_TaxDocument_ID**": Sets Tax Document ID value recieved from revenue service

"**rS_TaxDocument_Number**": Sets Tax Document number recieved from revenue service

"**rS_VAT_ID**": Sets VAT ID recieved from revenue service

"**rS_VAT_Number**": Sets VAT number recieved from revenue service

"**rS_Waybill_ID**": Sets waybill ID recieved from revenue service

"**rS_Waybill_Number**": Sets waybill number recieved from revenue service

"**status**": See [StatusesList] method (use [Name] value).

"**supplierAddress**": See [Owner] method (use [Address] value or [address] value from [OwnerAddresses]).

"**supplierAddressesID**": See [Owner] method (use [OA_OwnerAddressesID] value from [OwnerAddresses]).

"**createAccountingEntries**": Creates accounting entries using managerial information. Default=false

"**clearItems**": Clears all items for the operation.

"**returnFromCustomerItems**": Set OA_ManagerialEntriesID=0 to add a new Item specification. Specify the OA_ManagerialEntriesID value to update information about Item fields. To delete existing row, specify the value OA_ManagerialEntriesID and set "DeleteRow"=true.

"**oA_ManagerialEntriesID**": Specify an existing OA_ManagerialEntriesID to update or remove Item information, or 0 to add a new Item.

"**deleteRow**": If true, deletes Item information for specified OA_ManagerialEntriesID value.

"**code**": See [ItemsList] method (use [Code] value).

"**oA_ItemsID**": See [ItemsList] method (use [OA_ItemsID] value).

"**quantity**":

"**unit**": See [StockUnitsList] method (use [Unit] value).

"**oA_StockUnitsID**": See [StockUnitsList] method (use [OA_StockUnitsID] value).

"**price**":

"**amount**":

"**vatRate**":

"**vat**":

"**exciseRate**":

"**excise**":

"**quantityInRegisterUnit**":

"**oA_AccountsID**":

"**registerParentAccount**":

"rsItemCode":
"rsItemName":
"rsItemUnit":
"rsItemVATType": Standard = 0, ZeroRate = 1, Untaxed = 2
"costCentre": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.
"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

Examples

1. Update Return From Customer.Change "registerParentAccount" - 1620.

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3004,
  "buyerCode": "1",
  "buyerID": 1,
  "parentAccountForBuyer": "1410",
  "payedExciseAccount": "3110",
  "createAccountingEntries": true,
  "returnFromCustomerItems": [
    {
      "code": "1",
      "oA_ItemsID": 1,
      "price": 100,
      "amount": 100,
      "registerParentAccount": "1620"
    }
  ]
}

```

Server response Code(200):

```

{
  "id": 3004,
  "idFieldName": "OA_TransactionsID"
}

```

Server response Code(400):

```

[
  {
    "errorNumber": 51190,
    "description": "Property not found!",
    "comment": "OA_TransactionsID=3004 [2]\n Buyer=[11]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "ReturnFromCustomer",
    "entryPoint": "set property",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]

```

DELETE/api/ReturnFromCustomer

Returns OK or Error description Json.

Schema

```

{
  "token": "string",
  "oA_TransactionsID": 0
}

```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

Examples

1. Delete ReturnFromCustomer
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3004
}
```

Server response Code(200):

```
{
  "id": 3004,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_TransactionsID = 503",

    "class": "Transaction",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

GetReturnFromCustomerByID

POST/api/GetReturnFromCustomerByID

Gets Return From Customer and its Items by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "OA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value).

Examples

1. Gets Return From Customer by OA_TransactionsID-3004
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 3004
}
```

ReturnFromCustomersList

POST/api/ReturnFromCustomersList

Gets Return From Customers. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"**token**": Set [token] string from [LogIn] response value

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1.

"**sort**": Use SQL ORDER BY string with field names.

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list of ReturnFromCustomersList.

Request body:

```

{

```

```
"token": "... paste here [LogIn] response value ...",
"topRecordsCount":1 ,
"filter": "[ViewOA_ReturnFromCustomerOperations].[OA_TransactionsID]=3004",
"sort": "[Buyer code],[Buyer name]",
"pageNumber": 1
}
```

Server response Code(200):

```
{
  "Info": [
    {

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"costCentreName": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"currency": See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified. If omitted, gets first register currency from parameters.

"documentComment":

"documentDate": Sets operation date. If not specified - sets current date.

"documentNumber": Sets the transaction document number. If not specified, sets a unique number in the current year.

"dueDate":

"isRateFixed": Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreName] property specified. If omitted, gets cost centre from parameters.

"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currency] property specified. If omitted, gets first register currency from parameters.

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.

"rate": Sets the currency rate. If not specified, gets the rate by [DocumentDate]. See [CurrencyRatesList]

"receiverAddress": See [Owner] method (use [Address] value or [Address] from from [OwnerAddresses]).

"receiverAddressesID": See [Owner] method (use [OA_OwnerAddressesID] value from from [OwnerAddresses]).

"sellerCode": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [SellerID] property specified.

"sellerID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [SellerCode] property specified.

"status": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.

"supplierAddress": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).

"supplierAddressID": See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses]).

"supplierCode": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [SupplierID] property specified.

"supplierID": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [SupplierCode] property specified.

"orderToSupplierItems": OrderToSupplierItemAdd

"code": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.

"oA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.

"quantity":

"unit": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item register minimum unit.

"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"price": If omitted, calculated as [Amount]/[Quantity]

"amount": If omitted, calculated as [Quantity]*[Price]

"vatRate": If not specified, depends on [vatType] values of [Item], [Seller] and [owner] (See [GetItemByID], [GetDebitorCreditorByID] and [Owner] methods)

"vat": If omitted, calculated as [Amount]*[VATRate]/100

"exciseRate": If not specified, gets from [exciseRate] value of [Item] object (See [GetItemByID] method)

"excise": If omitted, calculated as [Quantity]*[ExciseRate]

"quantityInRegisterUnit": Required if [hasDoubleRegisterUnit] is true for the [Item] object

"supplierItemCode":

"supplierItemName":

"supplierItemUnit":

"supplierItemVATType":

"oA_AccountsID": If not specified, gets from [oA_AccountsID] value of [Item] object (See [GetItemByID] method)

"registerParentAccount": If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

"costCentre": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

Examples

1. Adds new Order To Supplier
Request body:

```
{
  "token": "... paste here [Login] response value ...",

Field description

[Token] and [OA_TransactionsID] is necessary. Specify only those fields that you want to change.

"**token**": Set [token] string from [LogIn] response value

"**oA_TransactionsID**":

"**costCentreName**": See [CostCentresList] method (use [Name] value)

"**currency**": See [CurrenciesList] method (use [Currency] value).

"**documentComment**":

"**documentDate**": Sets operation date

"**documentNumber**":

"**dueDate**":

"**isRateFixed**": Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value)

"**oA_CurrenciesID**": See [CurrenciesList] method (use [OA_CurrenciesID] value)

"**oA_StatusID**": See [StatusesList] method (use [OA_StatusID] value).

"**rate**": Sets the currency rate.

"**receiverAddress**": See [Owner] method (use [Address] value or [Address] from [OwnerAddresses])

"**receiverAddressesID**": See [Owner] method (use [OA_OwnerAddressesID] value from [OwnerAddresses])

"**sellerCode**": See [DebitorCreditorsList] method (use [Code] value)

"**sellerID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value)

"**status**":

"**supplierAddress**": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses])

"**supplierAddressID**": See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses])

"**supplierCode**": See [DebitorCreditorsList] method (use [Code] value)

"**supplierID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value).

"**clearItems**": Clears all items for the operation.

"**orderToSupplierItems**": Set OA_ManagerialEntriesID=0 to add a new Item specification. Specify the OA_ManagerialEntriesID value to update information about Item fields. To delete existing row, specify the value OA_ManagerialEntriesID and set "DeleteRow"=true.

"**oA_ManagerialEntriesID**": Specify an existing OA_ManagerialEntriesID to update or remove Item information, or 0 to add a new Item.

"**deleteRow**": If true, deletes Item information for specified OA_ManagerialEntriesID value.

"**code**": See [ItemsList] method (use [Code] value).

"**oA_ItemsID**": See [ItemsList] method (use [OA_ItemsID] value)

"**quantity**": 0,

"**unit**": See [StockUnitsList] method (use [Unit] value)

"**oA_StockUnitsID**": See [StockUnitsList] method (use [OA_StockUnitsID] value).

"**price**":

"**amount**":

"**vatRate**":

"**vat**":

"**exciseRate**":

"**excise**":

"**quantityInRegisterUnit**":

"**supplierItemCode**":

"**supplierItemName**":

"**supplierItemUnit**":

"**supplierItemVATType**":

"**oA_AccountsID**":

"**registerParentAccount**":

"**costCentre**": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

Examples

1. Update Order To Supplier

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 2011,
  "costCentreName": "New cost center",
  "oA_CostCentreID": 2
}
```

Server response Code(200):

```
{
  "id": 2011,
  "idFieldName": "OA_TransactionsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51190,
    "description": "Property not found!",
    "comment": "OA_TransactionsID=2011 [1]\n[OA_CostCentreID]=3",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "OrdersToSuppliers",
    "entryPoint": "set property",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/OrderToSupplier
Returns OK or Error description Json.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_TransactionsID":

Examples

1. Delete Order To Supplier

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_TransactionsID": 2011  
}
```

Server response Code(200):

```
{  
  "id": 2011,  
  "idFieldName": "OA_TransactionsID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51051,  
    "description": "Record does not exist or read prohibited for user!",  
    "comment": "OA_TransactionsID = 222",  
    "command": "",  
    "errorType": "ErrorType_Error",

    "class": "OrdersToSuppliers",  
    "entryPoint": "GetProperties",  
    "resourceDLL_ForTranslation": "ORIS_Accounting",  
    "errorPointer": 0  
  }  
]
```

GetOrderToSupplierByID

POST/api/GetOrderToSupplierByID

Gets Order To Supplier and its Items by OA_TransactionsID value.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0  
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value)

Examples

1. Gets Order To Supplier and its Items by OA_TransactionsID =2014

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 2014
}
```

```

OrderToSuppliersList

POST/api/OrderToSuppliersList

Gets Order To Suppliers. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get list debtor/creditors (organization or person) of Order To Supplier under 1

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "filter": "UPPER([ViewOA_OrdersToSuppliers].[Seller code]) LIKE N'1%'",
  "sort": "[OA_TransactionsID],[Numeric document number]",
  "pageNumber": 1
}

```

```
}
```

Server response Code(200):

```
"Info": [  
  {  
    "RowCount": 1,  
    "PageCount": 1,  
    "PageRowCount": 1,  
    "PageNumber": 1

    "oA_CostCentreID": 0,
    "costCentreTo": "string",
    "toOA_CostCentreID": 0
  }
]
}

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"costCentreFrom": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"costCentreTo": See [CostCentresList] method (use [Name] value). Can be omitted if [ToOA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"documentComment":

"documentDate": Sets operation date. If not specified - sets current date.

"documentNumber": Sets the transaction document number. If not specified, sets a unique number in the current year.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreFrom] property specified. If omitted, gets cost centre from parameters.

"oA_SalePriceTypesID": See [SalePriceTypesList] method (use [oA_SalePriceTypesID] value). Can be omitted if [SalePriceType] property specified.

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.

"salePriceType": See [SalePriceTypesList] method (use [description] value). Can be omitted if [OA_SalePriceTypesID] property specified.

"status": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.

"toOA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreTo] property specified. If omitted, gets cost centre from parameters.

"orderOfTransferItems": OrderOfTransferItemAdd

"code": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.

"oA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.

"quantity":

"unit": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item register minimum unit.

"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item register minimum unit.

"price": If omitted, calculated as [Amount]/[Quantity]

"amount": If omitted, calculated as [Quantity]*[Price]

"quantityInRegisterUnit": Required if [hasDoubleRegisterUnit] is true for the [Item] object

"oA_AccountsID": If not specified, gets from [oA_AccountsID] value of [Item] object (See [GetItemByID] method)

"registerParentAccount": If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

"costCentreFrom": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"oA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreFrom] property specified. If ommite, gets cost centre from parameters..
 "costCentreTo": See [CostCentresList] method (use [Name] value). Can be omitted if [ToOA_CostCentreID] property specified. If ommite, gets cost centre from parameters.
 "toOA_CostCentreID": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreTo] property specified. If ommite, gets cost centre from parameters.

Examples

1. Add new Order Of Transfer.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "costCentreFrom": "General cost center",
  "costCentreTo": "New cost center",
  "toOA_CostCentreID": 2,

```

GetOrderOfTransferByID

POST/api/GetOrderOfTransferByID

Get Order Of Transfer and its Items by OA_TransactionsID value.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0
}
```

Field description

[Token] and [OA_TransactionsID] is necessary.

"token": Set [token] string from [LogIn] response value

"OA_TransactionsID": See [TransactionsList] method (use [OA_TransactionsID] value)

Examples

1. Get Order Of Transfer and its Items by OA_TransactionsID=2013

Request body:

```
{
```

```
"token": "... paste here [LogIn] response value ...",
"oA_TransactionsID": 2013
}
```

Server response Code(200):

```

OrderOfTransfersList

POST/api/OrderOfTransfersList

Gets Order Of Transfers. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [Login] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get Order Of Transfers Info and Result tables.

Request body:

```
{
  "token": "... paste here [Login] response value ...",
  "filter": "[ViewOA_OrdersOfTransfers].[OA_TransactionsID]=4008",
  "sort": "[OA_TransactionTypesID],[OA_CostCentreID]"
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_TransactionsID": 4008,
      "Document date": "2023-05-24T12:09:04",
      "OA_TransactionTypesID": 42,
      "Comment": "",
      "Document number": "2",
      "OA_CostCentreID": 1,
      "Cost centre from": "General cost center",
      "Amount": 0.00000000,
      "OA_StatusID": 2,
      "Status": "Confirmed",
      "Numeric document number": 2
    }
  ]
}
```

OrderFromByuer

POST/api/OrderFromByuer

Adds new Order From Byuer. Returns ID value or Error description Json.

Schema

```
{

    }
  ]
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"**token**": "string",
"**buyerCode**": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [BuyerID] property specified.
"**buyerID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [BuyerCode] property specified.
"**costCentreName**": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.
"**currency**": See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified. If omitted, gets first register currency from parameters.
"**documentComment**":
"**documentDate**": Sets operation date. If not specified - sets current date.
"**documentNumber**": Sets the transaction document number. If not specified, sets a unique number in the current year.
"**dueDate**":
"**isRateFixed**": Sets a fixed rate flag. If true, then equivalent values in accounting entries of this operation will not be recalculated when the exchange rate changes.
"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentreName] property specified. If omitted, gets cost centre from parameters.
"**oA_CurrenciesID**": See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currency] property specified. If omitted, gets first register currency from parameters.
"**oA_SalePriceTypesID**": See [SalePriceTypesList] method (use [oA_SalePriceTypesID] value). Can be omitted if [SalePriceType] property specified.
"**oA_StatusID**": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.
"**rate**": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified.
"**receiverAddress**": See [GetDebitorCreditorByID] method (use [Address] value from [DebitorCreditorAddresses]).
"**receiverAddressesID**": See [GetDebitorCreditorByID] method (use [OA_DebitorCreditorAddressesID] value from [DebitorCreditorAddresses]).
"**receiverCode**": See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [ReceiverID] property specified.
"**receiverID**": See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [ReceiverCode] property specified.
"**salePriceType**": See [SalePriceTypesList] method (use [description] value). Can be omitted if [OA_SalePriceTypesID] property specified.
"**status**": See [StatusesList] method (use [Name] value). Can be omitted if [OA_StatusID] property specified.
"**supplierAddress**": See [Owner] method (use [Address] value or [Address] from [OwnerAddresses]).
"**supplierAddressesID**": See [Owner] method (use [OA_OwnerAddressesID] value from [OwnerAddresses]).
"**supplierID**":

"**ordersFromBuyerItems**": OrderFromBuyerItemAdd
"**code**": See [ItemsList] method (use [Code] value). Can be omitted if [OA_ItemsID] property specified.
"**oA_ItemsID**": See [ItemsList] method (use [OA_ItemsID] value). Can be omitted if [Code] property specified.
"**quantity**":
"**unit**": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified. If both are omitted, gets the Item sale unit.
"**oA_StockUnitsID**": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified. If both are omitted, gets the OA_StockUnitsID for Item sale minimum unit.
"**price**": If omitted, calculated as [Amount]/[Quantity]
"**amount**": If omitted, calculated as [Quantity]*[Price]
"**vatRate**": If not specified, depends on [vatType] values of [Item], [Buyer] and [owner] (See [GetItemByID], [GetDebitorCreditorByID] and [Owner] methods)
"**vat**": If omitted, calculated as [Amount]*[VATRate]/100
"**exciseRate**": If not specified, gets from [exciseRate] value of [Item] object (See [GetItemByID] method)
"**excise**": If omitted, calculated as [Quantity]*[ExciseRate]
"**quantityInRegisterUnit**": Required if [hasDoubleRegisterUnit] is true for the [Item] object
"**rsItemCode**":
"**rsItemName**":
"**rsItemUnit**":
"**rsItemVATType**":
"**itemSalePrice**":
"**itemSalePriceOA_CurrenciesID**":
"**itemSalePriceCurrency**":
"**itemSalePriceOA_StockUnitsID**":
"**itemSalePriceUnit**":
"**itemSalePriceInSaleCurrencyAndUnit**":
"**oA_AccountsID**": If not specified, gets from [OA_AccountsID] value of [Item] object (See [GetItemByID] method)
"**registerParentAccount**": If not specified, gets account by [OA_AccountsID] of [Item] object (See [GetItemByID] method)

"**costCentre**": See [CostCentresList] method (use [Name] value). Can be omitted if [OA_CostCentreID] property specified. If omitted, gets cost centre from parameters.

"**oA_CostCentreID**": See [CostCentresList] method (use [OA_CostCentreID] value). Can be omitted if [CostCentre] property specified. If omitted, gets cost centre from parameters.

Examples

1. Add new Order From Buyer.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",

OrdersFromByuersList

POST/api/OrdersFromByuersList

Gets Orders From Byuers. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get Order From Byuers Info and Result tables.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "filter": "",
  "sort": "",
  "pageNumber": 1
}
```

Server response Code(200):

Examples

1. Update bankAccount by account number and cost centre by "oA_CostCentreID" - 2 , using "oA_EmployeeID" - 12

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "oA_EmployeeID": 12,
  "bankAccount": "1111",
  "oA_CostCentreID": 2
}

```

Server response Code(200):

```

{
  "id": 12,
  "idFieldName": "OA_EmployeeID"
}

```

Server response Code(400):

```
[
  {
    "errorNumber": 51150,
    "description": "Employee does not exist!",
    "comment": "[WHERE OA_EmployeeID = 12] Record is not in table or user have no permissions to read this record.",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Employee",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/Employee

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_EmployeeID": 0
}
```

Field description

[Token] and [OA_EmployeeID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_EmployeeID": 0

Examples

1. Delete employee from list using "oA_EmployeeID" - 12

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_EmployeeID": 12
}
```

Server response Code(200):

```
{
  "id": 12,
  "idFieldName": "OA_EmployeeID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51109,
    "description": "ORIS_Tools internal error!",
    "comment": "OA_EmployeeID=12 [2] [Person]\nExist relation to another table.\n\nRelated table [OA_SalaryResults].\n\n[547] The DELETE statement conflicted with the REFERENCE constraint \"FK_OA_SalaryResults_OA_Employee\". The conflict occurred in database \"NDatabaseEN\", table \"dbo.OA_SalaryResults\", column 'OA_EmployeeID'.[3621] The statement has been terminated.",
    "command": "",

  }
]
```

EmployeesList

POST/api/EmployeesList

Gets Employee. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first 2 employees from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_EmployeeID": 12,
      "OA_DebitorCreditorID": 2,
      "OA_DebitorCreditorBankAccountsID": 2,
      "Comment": "",
      "Identity number": "2",
      "Legal name": "Person",
      "Clock number": "",
      "Address": "",
      "Bank account": "1111",
      "OA_BanksID": 8,
      "Bank code": "TBCBGE22",
      "Bank name": "TBC Bank",
      "OA_CostCentreID": 2,
      "Cost centre": "New cost center",
      "OA_CostUnitID": 1,
      "Cost unit": "Total cost unit"
    },
    {
      "OA_EmployeeID": 13,
```

```

"OA_DebitorCreditorID": 1002,
"Comment": "",
"Identity number": "12345678910",
"Legal name": "someone",
"Clock number": "",
"Address": "",
"OA_CostCentreID": 1,
"Cost centre": "General cost center",
"OA_CostUnitID": 1,
"Cost unit": "Total cost unit"
}
]
}

```

2. Get a list of Employees only from General cost center and sort by Identity number decreasing
Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"filter": "([ViewOA_Employee].[Cost centre])=N'General cost center' ",
"sort": "[Identity number] DESC"
}

```

EmployeeDepartment

POST/api/EmployeeDepartment

Adds new Employee Department. Returns ID value or Error description Json.

Schema

```

{
"token": "string",
"comment": "string",
"name": "string",
"parentID": 0,
"employeePosition": [
{
"name": "string"
}
]
}

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"comment":

"name": Name of department

"parentID": Parent Employee Department ID to form tree structure. Specify 0 to specify the root Employee Department

"employeePosition":

"name": Position name for employee department

Examples

1. Add new department "Financial"
Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"name": "Financial"
}

```

Server response Code(200):

```

{
"id": 3,
"idFieldName": "OA_EmployeeDepartmentID"
}

```

```
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51109,  
    "description": "ORIS_Tools internal error!",  
    "comment": "OA_EmployeeDepartmentID=0 [Financial]\nA duplicate value cannot be  
inserted.\r\n[Name]\r\n\r\n[2601] Cannot insert duplicate key row in object 'dbo.OA_EmployeeDepartment' with  
unique index 'IdxOA_EmployeeDepartment1'. The duplicate key value is (Financial).[3621] The statement has been  
terminated.",  
    "command": "",  
    "errorType": "ErrorType_Error",  
    "source": "OA_BusinessObject.dll",  
    "class": "EmployeeDepartment",  
    "entryPoint": "Update",  
    "resourceDLL_ForTranslation": "ORIS_Administrate",  
    "errorPointer": 0  
  }  
]
```

2. Add child department "Accountants" under "Financial" and employee position "Chief Accountant"

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "name": "Accountants",  
  "parentID": 3,  
  "employeePosition": [  
    {  
      "name": "Chief Accountant"  
    }  
  ]  
}
```

PUT/api/EmployeeDepartment

Updates Employee Department. Returns OK or Error description Json

Schema

```
{  
  "token": "string",  
  "oA_EmployeeDepartmentID": 0,  
  "comment": "string",  
  "name": "string",  
  "parentID": 0,  
  "clearEmployeePosition": true,  
  "employeePosition": [  
    {  
      "oA_EmployeePositionTitleID": 0,  
      "deleteRow": true,  
      "name": "string"  
    }  
  ]  
}
```

Field description

"token": Set [token] string from [LogIn] response value

"oA_EmployeeDepartmentID": See [EmployeeDepartmentsList] method (use [OA_EmployeeDepartmentID] value)

"comment":

"name":

"parentID": Parent Employee Department ID to form tree structure. Specify 0 to specify the root Employee Department

"clearEmployeePosition": Clears all related Employee Position for the Department

"employeePosition":

"**oA_EmployeePositionTitleID**": Specify an existing OA_EmployeePositionTitleID to update or remove related item information, or 0 to add a new related position

"**deleteRow**": If true, deletes related unit information for specified OA_EmployeePositionTitleID value

"**name**": Position name for employee department

Examples

1. Update employee position – add “Accountant” and “Cashier” under child department “Accountants” using “oA_EmployeeDepartmentID” - 6

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_EmployeeDepartmentID": 6,
  "clearEmployeePosition": false,
  "employeePosition": [
    {
      "name": "Accountant"
    },
    {
      "name": "Cashier"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 6,
  "idFieldName": "OA_EmployeeDepartmentID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_EmployeeDepartmentID = 118",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "EmployeeDepartment",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/EmployeeDepartment

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_EmployeeDepartmentID": 0
}
```

Field description

[Token] and [OA_EmployeeDepartmentID] is necessary.

"**token**": Set [token] string from [LogIn] response value

"**oA_EmployeeDepartmentID**": 0

Examples

1. Delet Employee Department by "oA_EmployeeDepartmentID" - 6

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_EmployeeDepartmentID": 6
}
```

Server response Code(200):

```
{
  "id": 6,
  "idFieldName": "OA_EmployeeDepartmentID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51109,
    "description": "ORIS_Tools internal error!",
    "comment": "OA_EmployeeDepartmentID=6 [Accountants]\nExist relation to another table.\r\nRelated table [OA_Employee].\r\n\r\n[547] The DELETE statement conflicted with the REFERENCE constraint \"FK_OA_Employee_OA_EmployeePositionTitle\". The conflict occurred in database \"NDatabaseEN\", table \"dbo.OA_Employee\", column 'OA_EmployeePositionTitleID'.[3621] The statement has been terminated.",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "EmployeeDepartment",
    "entryPoint": "RealDelete",
    "resourceDLL_ForTranslation": "ORIS_Administrate",
    "errorPointer": 0
  }
]
```

EmployeeDepartmentsList

POST/api/EmployeeDepartmentsList

Gets Employee Departments. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

[Token] and [OA_EmployeeDepartmentID] is necessary.

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get list of all Employee Departments sort by level

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "sort": [Level]
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_EmployeeDepartmentID": 3,
      "ParentID": 0,
      "Level": 0,
      "Name": "Financial",
      "Comment": ""
    },
    {
      "OA_EmployeeDepartmentID": 6,
      "ParentID": 3,
      "Level": 1,
      "Name": "Accountants",
      "Comment": ""
    }
  ]
}
```

EmployeePositionsList

POST/api/EmployeePositionsList

Gets Employee Positions. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get list of employees, who has specified position title "Accountant"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Position title] IN (N'Accountant')"
```

Server response Code(200):

```
{
  "Info": [
    {
```

```

    "RowCount": 1,
    "PageCount": 0,
    "PageRowCount": 0,
    "PageNumber": 0
  }
],
"Result": [
  {
    "OA_EmployeePositionTitleID": 18,
    "Position title": "Accountant",
    "OA_EmployeeDepartmentID": 6,
    "SequenceNumber": 2,
    "Department": "Accountants"
  }
]
}

```

GetDataTableEmployeeMonthAccrueds

POST/api/GetDataTableEmployeeMonthAccrueds

Gets Employee Month Accrueds. Returns [Info] and [Result] tables

Schema

```

{
  "token": "string",
  "oA_EmployeeID": 0,
  "year": 0,
  "month": 0,
  "oA_MacrosID": 0,
  "reportNumber": "string"
}

```

Field description

"token": Set [token] string from [LogIn] response value

"oA_EmployeeID":

"year":

"month":

"oA_MacrosID":

"reportNumber":

Examples

1. Get employee month accrued by "oA_EmployeeID" -12, year - 2023 and month - 5
Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "oA_EmployeeID": 12 ,
  "year":2023,
  "month": 5
}

```

Server response Code(200):

```

{
  "Info": [
    {
      "RowCount": 1
    }
  ],
  "Result": [
    {
      "OA_SalaryAccruedsID": 137,
      "OA_EmployeeID": 12,
      "Year": 2023,

```

```
"Month": 5,
"A": 1000.00000000
}
]
}
```

GetDataTableEmployeeResults

POST/api/GetDataTableEmployeeResults

Gets Employee salary results. Returns [Info] and [Result] tables

Schema

```
{
  "token": "string",
  "oA_EmployeeID": 0,
  "year": 0,
  "month": 0,
  "oA_MacrosID": 0,
  "reportNumber": "string"
}
```

Field description

All fields is necessary.

"token": Set [token] string from [LogIn] response value

"oA_EmployeeID":

"year":

"month":

"oA_MacrosID":

"reportNumber":

Examples

1. Get employee salary results by "oA_EmployeeID" -12, year - 2023 and month - 8

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_EmployeeID": 12 ,
  "year":2023,
  "month": 8,
  "oA_MacrosID": 298,
  "reportNumber": "8"
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1
    }
  ],
  "Result": [
    {
      "OA_SalaryResultsID": 11,
      "OA_EmployeeID": 12,
      "OA_MacrosID": 298,
      "Year": 2023,
      "Month": 8,
      "ReportNumber": "8",
      "A": 1000.00000000,
      "B": 23.00000000,
      "C": 1000.00000000,
      "D": 0.00000000,
      "E": 0.00000000,
    }
  ]
}
```

```

"F": 0.00000000,

"AO": 0.00000000,
"OA_CostUnitID": 1
}
]
}

```

GetDataTableEmployeeYearAccrueds

POST/api/GetDataTableEmployeeYearAccrueds

Gets Employee Current Year Accrueds. Returns [Info] and [Result] tables

Schema

```

{
  "token": "string",
  "oA_EmployeeID": 0,
  "topRecordsCount": 0,
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"oA_EmployeeID":

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get employee current year accrued by "oA_EmployeeID" -12, first 2 month
Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "oA_EmployeeID": 12,
  "topRecordsCount": 2
}

```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 0,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_SalaryAccruedsID": 133,
      "OA_EmployeeID": 12,
      "Year": 2023,
      "Month": 1,
      "A": 1000.00000000,
      "J": 22.00000000,
      "AA": 22
    },
    {
      "OA_SalaryAccruedsID": 134,
      "OA_EmployeeID": 12,
      "Year": 2023,
      "Month": 2,
      "A": 1000.00000000
    }
  ]
}
```

GetDataTableReportNumbers

POST/api/GetDataTableReportNumbers

Gets salary Report Numbers. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get all salary report by current year

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 0,
      "PageCount": 0,
      "PageRowCount": 0,

```

```

    "PageNumber": 0
  }
],
"Result": [
  {
    "Year": 2023,
    "Month": 8,
    "OA_MacrosID": 298,
    "ReportNumber": "8",
    "Comment": "Salary accrued report"
  },
  {
    "Year": 2023,
    "Month": 2,
    "OA_MacrosID": 298,
    "ReportNumber": "2",
    "Comment": "Salary accrued report"
  },
  {
    "Year": 2023,
    "Month": 1,
    "OA_MacrosID": 298,
    "ReportNumber": "1",
    "Comment": "Salary accrued report"
  }
]
}

```

GetDataTableReportResult

POST/api/GetDataTableReportResult

Gets salary Report Result. Returns [Info] and [Result] tables

Schema

```

{
  "token": "string",
  "year": 0,
  "month": 0,
  "oA_MacrosID": 0,
  "reportNumber": "string",
  "topRecordsCount": 0,
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"year":

"month":

"oA_MacrosID":

"reportNumber":

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Gets salary report result year - 2023, month - 1, "oA_MacrosID" - 298 – SalaryAccruedReport
Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "year": 2023,
  "month": 1,
  "oA_MacrosID": 298,
  "reportNumber": "1",

```

```
"topRecordsCount":1,  
"pageNumber": 0  
}
```

Server response Code(200):

```
{  
  "Info": [  
    {  
      "RowCount": 0,  
      "PageCount": 0,  
      "PageRowCount": 1,

GetEmployeeDepartmentByID

POST/api/GetEmployeeDepartmentByID

Gets employee department and its related positions list.

Schema

```
{  
  "token": "string",  
  "oA_EmployeeDepartmentID": 0  
}
```

Field description

"token": Set [token] string from [LogIn] response value

"oA_EmployeeDepartmentID":

Examples

1. Get list of employee departments using "oA_EmployeeDepartmentID" - 6

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_EmployeeDepartmentID":6  
}
```

```

GetDataTableSalaryResultArchives

POST/api/GetDataTableSalaryResultArchives

Gets Salary Results from Archive. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter":

"sort":

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first two salary results from archives, filter by year- 2023, month -1 and sort by monthly accrued
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2,
  "filter": "[Year] IN (2023) AND [ViewOA_SalaryResults].[Month]=1",
  "sort": "[A]",
  "pageNumber": 0
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 0,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [
    {

GetDataTableSalaryAccruedsArchives

POST/api/GetDataTableSalaryAccruedsArchives

Gets Salary Accrueds from Archive. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "filter": "string",
  "sort": "string",
  "topRecordsCount": 0,
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first two data from salary accrued archives

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}

```

Server response Code(200):

```

{
  "Info": [
    {

DELETE/api/FixedAsset

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_ItemsID": 0
}
```

Field description

[Token] and [OA_ItemsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_ItemsID":

Examples

1. Delete FixedAssets from list using "oA_ItemsID" - 2002.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ItemsID": 2002
}
```

Server response Code(200):

```
{
  "id": 2002,
  "idFieldName": "OA_ItemsID"
}
```

Server response Code(400):

```
[
  {
```

```

}
]

```

FixedAssetsList

POST/api/FixedAssetsList

Gets Fixed Assets. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get fixed assets list from database in specified filter - fixed assets name (FixedAssets).

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 6,
  "filter": "UPPER([ViewOA_FixedAssets].[Name]) LIKE N'%FIXEDASSET'",
  "pageNumber": 1
}

```

Server response Code (200):

```

{
  "Info": [
    {
      "RowCount": 27,
      "PageCount": 5,
      "PageRowCount": 6,
      "PageNumber": 1
    }
  ],
  "Result": [
    {
      "OA_ItemsID": 1006,
      "Code": "21",
      "Name": "FixedAsset",
      "Item type": 1,

Examples

1. Add new ManufacturingDesign "code" -1032, name-cake, code -1033, materialName-egg.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ManufacturingDesignID": 13,
  "code": "1032",
  "name": "cake",
  "oA_ItemsID": 1032,
  "oA_StockUnitsID": 1,
  "manufacturingDesignBOMs": [
    {
      "oA_ManufacturingDesignBOMID": 112,
      "oA_ManufacturingDesignID": 13,
      "oA_ItemsID": 1033,
      "code": "1033",
      "materialName": "egg"
    }
  ]
}
```

Server response Code (200):

```
{
  "id": 27,
  "idFieldName": "OA_ManufacturingDesignID"
}
```

Server response Code (400):

```
[
  {
    "type": "https://tools.ietf.org/html/rfc7231#section-6.5.1",
    "title": "One or more validation errors occurred.",

```

ManufacturingDesignsList

POST/api/ManufacturingDesignsList

Gets Manufacturing Designs.Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get ManufacturingDesignsList from database in specified filter.

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2,
  "filter": "UPPER([ViewOA_ManufacturingDesign].[Code]) LIKE N'%1032%'",
  "pageNumber": 1
}

```

Server response Code (200):

```

{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 1,
      "PageRowCount": 2,
      "PageNumber": 1
    }
  ],
  "Result": [
    {
      "OA_ManufacturingDesignID": 27,
      "OA_ItemsID": 1032,
      "OA_StockUnitsID": 1,
      "Code": "1032",
      "Product name": "CAKE",
      "Quantity": 1.00000000,
      "Unit": "Piece",
      "Comment": ""
    }
  ]
}

```

```
"Item type": 0,
"NUM_ROW": 1
}
]
}
```

2. Get a list of ManufacturingDesigns (Code,Product name).
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "sort": "[Code],[Product name]",
  "pageNumber": 1
}
```

CostDriver

POST/api/CostDriver

Adds new Cost Driver.Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CostDriverID": 0,
  "code": "string",
  "description": "string",
  "name": "string",
  "oA_ItemsID": 0,
  "after_update_fill_ID_field_values_in_BOM_datatable": true
}
```

Field description

"token": Set [token] string from [LogIn] response value
"oA_CostDriverID":
"code":
"description":
"name":
"oA_ItemsID":
"after_update_fill_ID_field_values_in_BOM_datatable":

Examples

1. Add new CostDriver, code-2006, name-CostDriver., description-cost driver N1007.
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CostDriverID": 1007,
  "code": "2006",
  "description": "cost driver N1007",

ManufacturingPlanningsList

POST/api/ManufacturingPlanningsList

Gets. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1.

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page.

Examples

1. Get first 6 ManufacturingPlanning from database.

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 6,
  "pageNumber": 1
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 6,
      "PageCount": 1,
      "PageRowCount": 6,
      "PageNumber": 1
    }
  ],

ManufacturingExecutionsList

POST/api/ManufacturingExecutionsList

Gets Manufacturing Executions. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": " Use SQL WHERE string by field names. Get field names by launch this method with property: [TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names.

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first ManufacturingExecutio from database.

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1
}

```

Server response Code(200):

```
{
  "Info": [
    {

Examples

1. Add "New Organization"- code : 12345

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "code": "12345",
  "name": "New organization"
}
```

Server response Code(200):

```
{
  "id": 1018,
  "idFieldName": "OA_DebitorCreditorID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51128,
    "description": "DebitorCreditor code already exists!",
    "comment": "Code [12345]\nName [New organization]\nOA_DebitorCreditorID [1018]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "DebitorCreditor",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

2. Add new Person, code "01010101010"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "code": "01010101010",
  "comment": "Add new person",
  "isForeigner": true,
  "isPerson": true,
  "name": "Person"
}
```

PUT/api/DebitorCreditor

Updates debtor/creditor (organization or person). Returns OK or Error description Json.

Schema

```

"phone":

"comment":

Examples

1. Update the details of "New Organization" using "oA_DebtorCreditorID" – 1018.
Add full address, Bank account - GE88BG0000000120121601 Bank of Georgia/BAGAGE22 and Phone number: +995 32 260 43 43

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebtorCreditorID": 1018,
  "address": "Al. Kazbegi Ave.",
  "cityName": "Tbilisi",
  "countryName": "Georgia",
  "zip": "0160",
  "debtorCreditorBankAccounts": [
    {
      "account": " GE88BG0000000120121601",
      "bankCode": "BAGAGE22",
      "bankName": "Bank of Georgia"
    }
  ],
  "debtorCreditorPhones": [
    {
      "phone": "+995 32 260 43 43"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 1018,
  "idFieldName": "OA_DebtorCreditorID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_DebtorCreditorID = 1018",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "DebtorCreditor",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

2. Update the details of Person using "oA_DebtorCreditorID" – 1019.
Add full address, Bank account - GE88BG0000000120121601 Bank of Georgia/BAGAGE22
Phone number – +995 32 260 43 43

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 1019,
  "address": "Al. Kazbegi Ave.",
  "cityName": "Tbilisi",
  "countryName": "Georgia",

  "debitorCreditorBankAccounts": [
    {
      "account": " GE88BG0000000120121601",
      "bankCode": "BAGAGE22",
      "bankName": "Bank of Georgia"
    }
  ],
  "debitorCreditorPhones": [
    {
      "phone": "+995 32 260 43 43"
    }
  ]
}
```

DELETE/api/DebitorCreditor

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_DebitorCreditorID": 0
}
```

Field description

[Token] and [OA_DebitorCreditorID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_DebitorCreditorID":

Examples

1. Delete "New Organization" From DebitorCreditor list, using "oA_DebitorCreditorID" – 1018

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 1018
}
```

Server response Code(200):

```
{
  "id": 1018,
  "idFieldName": "OA_DebitorCreditorID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51251,
    "description": "Can't delete Debitor/Creditor. A link(s) has been found!",
    "comment": "ID [1018] Code [12345] Name [New organization]\n\nAccount [31 10 1018]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "DebitorCreditor",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
  }
]
```

```
"errorPointer": 0
}
]
```

GetDebitorCreditorByID

POST/api/GetDebitorCreditorByID

Gets Debitor/Creditor and its Addresses,Bank Accounts,Legal Identifiers and Phones by OA_DebitorCreditorID value.

Schema

```
{
  "token": "string",
  "oA_DebitorCreditorID": 0
}
```

Field description

[Token] and [OA_DebitorCreditorID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_DebitorCreditorID":

Examples

1. Get information about "New Organization" From DebitorCreditor list, using "oA_DebitorCreditorID" – 1018

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 1018
}
```

Server response Code(200):

```

DebtorCreditorsList

POST/api/DebtorCreditorsList

Gets Debtor/Creditors. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"**token**": Set [token] string from [LogIn] response value

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"**sort**": Use SQL ORDER BY string with field names

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get DebtorCreditor list, filter by name "New organization" and "Person", sort by code

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Name] IN (N'New organization',N'Person')",
  "sort": "[Code]"
}

```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_DebitorCreditorID": 1019,
      "Code": "01010101010",
      "Name": "Person",
      "Is person": true,
      "City": "Tbilisi",
      "Address": "Al. Kazbegi Ave.",
      "Zip": "0160",
      "OA_CityID": 1,
      "SWIFT code": "",
      "First person": "",
      "Second person": "",
      "Treasury code": "",
      "Comment": "Add new person",

      "OA_CountryID": 82,
      "Country": "Georgia",
      "VAT type": 0
    }
  ]
}
```

2. Get first two DebitorCreditor from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

Organization

POST/api/Organization

Adds new Organization. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "address": "string",
  "cityName": "string",
  "code": "string",

Examples

1. Add "Organization"- code : 1234567 , full address, Bank account - GE88BG000000120121601 Bank of Georgia/BAGAGE22 and Phone number - +995 32 260 43 43

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "address": "Al. Kazbegi Ave.",
  "cityName": "Tbilisi",
  "code": "1234567",
  "countryName": "Georgia",
  "name": "Organization",
  "organizationBankAccounts": [
    {
      "account": "GE88BG000000120121601",
      "bankCode": "BAGAGE22",
      "comment": "Bank of Georgia"
    }
  ],
  "organizationPhones": [
    {
      "phone": "+995 32 260 43 43"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 1021,
  "idFieldName": "OA_DebitorCreditorID"
}
```

Server response Code(400):

```
[
  {

"deleteRow": If true, deletes phone information for specified OA_DebitorCreditorPhonesID value
"phone": "string",
"comment": "string"

Examples

1. Update the details of Organization using "oA_DebitorCreditorID" – 1021.
 Add Debitor/creditor Group using "oA_DebitorCreditorGroupID" – 1,
 change VAT tipe to 'Zero Rate'- 1 and clear Phone number: +995 32 260 43 43
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 1021,
  "oA_DebitorCreditorGroupID": 1,
  "vatType": 1,
  "clearDebitorCreditorPhones": true
}
```

Server response Code(200):

```
{
  "id": 1021,
  "idFieldName": "OA_DebitorCreditorID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_DebitorCreditorID = 1021",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Organization",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/Organization

Returns OK or Error desription Json.

Schema

```
{
  "token": "string",
```

```
"oA_DebitorCreditorID": 0
}
```

Field description

[Token] and [OA_DebitorCreditorID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_DebitorCreditorID":

Examples

1. Delete Organization using "oA_DebitorCreditorID" – 1021

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 1021
}
```

Server response Code(200):

```
{
  "id": 1021,
  "idFieldName": "OA_DebitorCreditorID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51251,
    "description": "Can't delete Debitor/Creditor. A link(s) has been found!",
    "comment": "ID [1021] Code [1234567] Name [Organization]\n\nAccount [1410 1021]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Organization",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

GetOrganizationByID

POST/api/GetOrganizationByID

Gets Organization and its Addresses,Bank Accounts and Phones by OA_DebitorCreditorID value.

Schema

```
{
  "token": "string",
  "oA_DebitorCreditorID": 0
}
```

Field description

[Token] and [OA_DebitorCreditorID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_DebitorCreditorID":

Examples

1. Get information about Organization by "oA_DebitorCreditorID" -1021

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",

```

```
"oA_DebitorCreditorID": 1021
}
```

Server response Code(200):

```
{
  "oA_DebitorCreditorID": 0,
  "address": "Al. Kazbegi Ave.",
  "cityName": "Tbilisi",
  "code": "1234567",
  "comment": "",
  "countryName": "Georgia",
  "debitorCreditorGroup": "Debitor/creditor Group",
  "firstPerson": "",
  "isForeigner": false,
  "name": "Organization",
  "oA_CityID": 1,
  "oA_CountryID": 82,
  "oA_DebitorCreditorGroupID": 1,
  "oA_SalePriceTypesID": 0,
  "salePriceType": "",
  "secondPerson": "",

      "bankCode": "BAGAGE22",
      "bankName": null,
      "comment": "Bank of Georgia"
    }
  ],
  "organizationPhones": []
}
```

OrganizationsList

POST/api/OrganizationsList

Gets Organizations. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first 2 organizations from list sort by "oA_DebitorCreditorID" in descending order

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2,
  "sort": "[OA_DebitorCreditorID] DESC"
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_DebitorCreditorID": 1021,
      "Identification code": "1234567",
      "Name": "Organization",
      "IsPerson": false,
      "City": "Tbilisi",
      "Address": "Al. Kazbegi Ave.",
      "Zip": "",
      "OA_CityID": 1,
      "SWIFT code": "",
      "First person": "",
      "Second person": "",
      "Treasury code": "",
      "Comment": "",
      "Is foreigner": false,
      "OA_CountryID": 82,
      "Country": "Georgia",
      "VAT type": 1,
      "OA_DebitorCreditorGroupID": 1,
      "Group": "Debitor/creditor Group"
    },
    {
      "OA_DebitorCreditorID": 1018,
      "Identification code": "12345",
      "Name": "New organization",
      "IsPerson": false,
      "City": "Tbilisi",
      "Address": "Al. Kazbegi Ave.",
      "Zip": "0160",
      "OA_CityID": 1,
      "SWIFT code": "",
      "First person": "",
      "Second person": "",
      "Treasury code": "",
      "Comment": "",
      "Is foreigner": false,
      "OA_CountryID": 82,
      "Country": "Georgia",
      "VAT type": 0
    }
  ]
}
```

2. Get a list of organizations with "Debitor/creditor Group"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Group] IN (N'Debitor/creditor Group)"
}
```

```
}
```

Person

POST/api/Person

Adds new Person. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "address": "string",
  "birthDay": "2023-05-19T10:10:21.472Z",

Examples

1. Update the details of Person using "oA_DebitorCreditorID" – 1024.
Change second Address: Al. Kazbegi Ave.14, using oA_CityID :1 - Tbilisi, "oA_CountryID" - 82 Georgia.
Add Phone number : +995 32 260 43 41
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 1024,
  "clearPersonBankAccounts": false,
  "personAddresses": [
    {
      "oA_DebitorCreditorAddressesID":10,
      "address": "Al. Kazbegi Ave.14",
      "oA_CityID":1,
      "oA_CountryID":82
    }
  ],
  "personPhones": [
    {
      "A_DebitorCreditorPhonesID":0,
      "phone": "+995 32 260 43 41"
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 1024,
  "idFieldName": "OA_DebitorCreditorID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51109,
    "description": "ORIS_Tools internal error!",
    "comment": "OA_DebitorCreditorID=1024 [01011022033]\nExist relation to another table.\n\nRelated table [OA_DebitorCreditorAddresses].\n\n[547] The UPDATE statement conflicted with the FOREIGN KEY constraint \"FK_OA_DebitorCreditorAddresses_OA_Country\". The conflict occurred in database \"NDatabaseEN\", table \"dbo.OA_Country\", column 'OA_CountryID'.[3621] The statement has been terminated.",

  }
]
```

DELETE/api/Person

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
```

```
"oA_DebitorCreditorID": 0
}
```

Field description

[Token] and [OA_DebitorCreditorID] is necessary

"token": Set [token] string from [LogIn] response value

"oA_DebitorCreditorID":

Examples

1. Delete Person using "oA_DebitorCreditorID " – 1024

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 1024
}
```

Server response Code(200):

```
{
  "id": 1024,
  "idFieldName": "OA_DebitorCreditorID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51251,
    "description": "Can't delete Debitor/Creditor. A link(s) has been found!",
    "comment": "ID [1024] Code [01011022033] Name [Person]\n\nAccount [3130 1024]",

    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

GetPersonByID

POST/api/GetPersonByID

Gets Debitor/Creditor and its Addresses,Bank Accounts,Legal Identifiers and Phones by OA_DebitorCreditorID value.

Schema

```
{
  "token": "string",
  "oA_DebitorCreditorID": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"oA_DebitorCreditorID":

Examples

1. Get information about Perdon using "oA_DebitorCreditorID" - 1024

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_DebitorCreditorID": 1024
}
```

Server response Code(200):

```

```

PersonsList

POST/api/PersonsList

Gets Persons. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first 2 Person from database

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_DebitorCreditorID": 2,
      "Identity number": "2",
      "Name": "Person333",
    }
  ]
}
```

```

    "IsPerson": true,
    "Clock number": "",
    "Address": "",
    "Zip": "",
    "Comment": "",
    "Is foreigner": false,
    "VAT type": 0
  },
  {
    "OA_DebitorCreditorID": 1002,
    "Identity number": "12345678910",
    "Name": "someone",
    "IsPerson": true,
    "Clock number": "",
    "Address": "",
    "Zip": "",
    "Comment": "",
    "Is foreigner": false,
    "VAT type": 0
  }
]

```

2. Get the 2nd page from the entire list of Persons, 1 records per page
Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "pageNumber": 2
}

```

3. Get all field names for further use in the filter
Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1
}

```

4. Get a list of Person with Tbilisi in city name and sort by Code
Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[City] IN (N'Tbilisi)"
  "sort": "[Code]"
}

```

Item

POST/api/Item

Adds item (commodity, fixed asset or service). Returns ID value or Error description Json.

Schema

```

{

"**itemUnits**":

"**measure**": Quantity of goods in the corresponding unit in relation to the minimum register unit of goods. Example: If the product is "minimum register unit"="piece" and "related unit"="box" and there are 10 items in one box, then specify "Measure"=10

"**relatedOA_StockUnitsID**": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [RelatedUnit] property specified

"**relatedUnit**": See [StockUnitsList] method (use [Unit] value). Can be omitted if [RelatedOA_StockUnitsID] property specified

"**relatedUnitQuantity**": Quantity of goods in the corresponding unit. Example: If the product is "minimum register unit"="piece" and "related unit"="box" and there are 12 items in 3 box, then specify "Measure"=12 and "RelatedUnitQuantity"=3

Examples

1. Add new item: type – commodity. Code - "1000001", name – "Commodity", ParentAccount – "1610", unit – "Piece" and related unit – "Kg" '1 piece = 10 kg'

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "code": "1000001",
  "itemType": 1,
  "name": "Commodity",
  "registerParentAccount": "1610",
  "unit": "Piece",
  "itemUnits": [
    {
      "measure": 1,
      "relatedUnit": "Kg",
      "relatedUnitQuantity": 10
    }
  ]
}
```

Server response Code(200):

```
{
  "id": 3005,
  "idFieldName": "OA_ItemsID"
}
```

Server response Code(400):

```
[
{
  "errorNumber": 51120,
  "description": "Unit does not exist!",
  "comment": "OA_ItemsID=0 [1000001] [Commodity]\nUnit=Kg",
  "command": "",
  "errorType": "ErrorType_Error",
  "source": "OA_BusinessObject.dll",
  "class": "Item",
  "entryPoint": "CheckAccountProperties",
  "resourceDLL_ForTranslation": "ORIS_Accounting",
  "errorPointer": 0
}
]
```

2. Add new item: type – Fixed asset. Code - “2000002”, name – “Fixed Asset”, ParentAccount – “2120”, unit – “Piece”

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "code": "2000002",
  "itemType": 1,
  "name": "Fixed Asset",
  "registerParentAccount": "2120",
  "unit": "Piece"
}
```

3. Add new item: type – Service. Code - “3000003”, name – “Service”, ParentAccount – “7425”, unit – “Service”

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "code": "3000003",
  "itemType": 2,
  "name": " Service ",
  "registerParentAccount": "7425",
  "unit": " Service "
}
```

PUT/api/Item

Updates item (commodity, fixed asset or service). Returns OK or Error description Json.

Schema

```

"oA_AccountsIDExpenseAccount": Will be used in managarial transaction. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [ItemWriteOffExpenseAccount] property specified

"**oA_CurrenciesID**": Sets sale price currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currencies] property specified

"**oA_DebitorCreditorID**": Responsible Person. See [DebitorCreditorsList] method (use [OA_DebitorCreditorID] value). Can be omitted if [ResponsiblePerson] property specified

"**oA_ItemGroupID**": See [ItemGroupsList] method (use [OA_ItemGroupID] value). Can be omitted if [ItemGroup] property specified

"**oA_ManufacturersID**": See [ManufacturersList] method (use [OA_ManufacturersID] value). Can be omitted if [Manufacturer] property specified

"**oA_StockUnitsID**": Register minimum unit. See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified

"**oA_StockUnitsID_ExciseUnit**": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [ExciseUnit] property specified

"**oA_StockUnitsID_SaleUnit**": Sale Unit. See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [SaleUnit] property specified

"**priceIncreasePercentage**": Will be used when forming sale price

"**registerParentAccount**": Register parent account. See [AccountsList] method (use [Account] value). Can be omitted if [OA_AccountsID] property specified

"**responsiblePerson**": Responsible Person. See [DebitorCreditorsList] method (use [Code] value). Can be omitted if [OA_DebitorCreditorID] property specified

"**salePrice**":

"**saleUnit**": See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID_SaleUnit] property specified

"**unit**": Register minimum unit. See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified

"**vatType**": Standard = 0, ZeroRate = 1, Untaxed = 2

"**writtenOff**":

"**clearItemUnits**": Clears all related units for the item

"**itemUnits**": Set OA_ItemStockUnitsID=0 to add a new related unit specification. Specify the OA_ItemStockUnitsID value to update information about related unit fields. To delete existing related unit, specify the value OA_ItemStockUnitsID and set "DeleteRow"=true

"**oA_ItemStockUnitsID**": Specify an existing OA_ItemStockUnitsID to update or remove related item information, or 0 to add a new related item

"**deleteRow**": If true, deletes related unit information for specified OA_ItemStockUnitsID value

"**measure**": Quantity of goods in the corresponding unit in relation to the minimum register unit of goods. Example: If the product is "minimum register unit"="piece" and "related unit"="box" and there are 10 items in one box, then specify "Measure"=10

"**relatedOA_StockUnitsID**": See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [RelatedUnit] property specified

"**relatedUnit**": See [StockUnitsList] method (use [Unit] value). Can be omitted if [RelatedOA_StockUnitsID] property specified

"**relatedUnitQuantity**": Quantity of goods in the corresponding unit. Example: If the product is "minimum register unit"="piece" and "related unit"="box" and there are 12 items in 3 box, then specify "Measure"=12 and "RelatedUnitQuantity"=3

Examples

1. Update commodity using "oA_ItemsID" - 3005.
Add Write Off Expense Account – "7210", Item group by "oA_ItemGroupID" – 2 Commodity Group,
sale Price – "100 GEL", sale unit – "Kg"
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ItemsID": 3005,
  "currencies": "GEL",
  "itemWriteOffExpenseAccount": "7210",
  "oA_ItemGroupID": 2,
  "salePrice": 100,
  "saleUnit": "Kg",
  "clearItemUnits": false
}
```

Server response Code(200):

```
{
  "id": 3005,
  "idFieldName": "OA_ItemsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_ItemsID = 30005",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Item",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/Item

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_ItemsID": 0
}
```

Field description

[Token] and [OA_ItemsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_ItemsID":

Examples

1. Delete item using "oA_ItemsID" – 3005 Commodity

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ItemsID": 3005
}
```

Server response Code(200):

```
{
  "id": 3005,
  "idFieldName": "OA_ItemsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51250,
    "description": "Can't delete item. A link(s) has been found!",
    "comment": "ID [3005] Code [1000001] Name [Commodity]\n\nAccount [1610 3005]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Item",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

GetItemByID

POST/api/GetItemByID

Gets Item (commodity, fixed asset or service) and its units by OA_ItemsID value.

Schema

```
{
  "token": "string",
  "oA_ItemsID": 0
}
```

Field description

[Token] and [OA_ItemsID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_ItemsID": See [ItemsList] method (use [OA_ItemsID] value)

Examples

1. Get information about item using ItemsID - 3005

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ItemsID": 3005
}
```

Server response Code(200):

```
{

    "errorPointer": 0
  }
]

```

ItemsList

POST/api/ItemsList

Gets Items (commodities, fixed assets and services). Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get a list of items (commodity, fixed asset or service) with registered parent account "1610"

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Register parent account] IN (N'1610')"
}

```

Server response Code(200):

```

{

```

```

"Info": [
  {
    "RowCount": 1,
    "PageCount": 0,
    "PageRowCount": 0,
    "PageNumber": 0
  }
],
"Result": [
  {
    "OA_ItemsID": 3005,
    "Code": "1000001",
    "Name": "Commodity",
    "Unit": "Piece",
    "OA_StockUnitsID": 1,
    "Item type": 0,
    "OA_AccountsID": 69,
    "Register parent account": "1610",
    "OA_ItemGroupID": 2,
    "Group": "Commodity Group",
    "Sale price": 100.00000000,
    "Written off": false,
    "OA_CurrenciesID": 1,
    "Currency": "GEL",
    "OA_StockUnitsID_SaleUnit": 1005,
    "Sale unit": "Kg",
    "VAT type": 0,
    "Inventory number": "",
    "Comment": "",
    "Register parent account name": "Merchandise inventory",
    "Manufacturer number": "",
    "Excise rate": 0.00000000,
    "Price increase percentage": 0.00000000,
    "OA_AccountsIDExpenseAccount": 180,
    "Item write-off expense account": "7210"
  }
]
}

```

2. Get first 10 items from list and sort by code

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 10
  "sort": "[Code]"
}

```

3. Get the 2nd page from the entire list of items, 10 records per page

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 10,
  "pageNumber": 2
}

```

4. Get all items for further use in the filter

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}

```

Service

POST/api/Service

Adds new Service. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "closeDate": "2023-05-29T11:27:56.838Z",
  "code": "string",
  "comment": "string",
  "currencies": "string",
  "expenseAccountForServicePurchase": "string",
  "itemGroup": "string",
  "name": "string",
  "oA_AccountsID": 0,
  "oA_CurrenciesID": 0,
  "oA_ItemGroupID": 0,
  "oA_StockUnitsID": 0,
  "salePrice": 0,
  "unit": "string",
  "vatType": 0
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"closeDate":

"code":

"comment":

"currencies": Sets sale price currency. See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified

"expenseAccountForServicePurchase": Expence account for service purchase. See [AccountsList] method (use [Account] value). Can be omitted if [OA_AccountsID] property specified "itemGroup": See [ItemGroupsList] method (use [Name] value). Can be omitted if [OA_ItemGroupID] property specified

"name": Name of service

"oA_AccountsID":Expence account for service purchase. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [RegisterParentAccount] property specified

"oA_CurrenciesID":Sets sale price currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currencies] property specified

"oA_ItemGroupID": See [ItemGroupsList] method (use [OA_ItemGroupID] value). Can be omitted if [ItemGroup] property specified

"oA_StockUnitsID": Register minimum unit. See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified

"salePrice":

"unit": Register minimum unit. See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified

"vatType": Standard = 0, ZeroRate = 1, Untaxed = 2

Examples

1. Add service name - "Tax Service", code - "5000005", currencie – "GEL", expense account for service purchase – "7425", unit –"Service"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "code": "5000005",
  "currencies": "GEL",
  "expenseAccountForServicePurchase": "7425",
  "name": "Tax Service",
  "unit": "Service"
}
```

Server response Code(200):

```
{
  "id": 4005,
  "idFieldName": "OA_ItemsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51190,
    "description": "Property not found!",
    "comment": "OA_ItemsID=0 Code=5000005\n[ExpenseAccountForServicePurchase]=7425",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Service",
    "entryPoint": "set property",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/Service

Updates Service. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_ItemsID": 0,
  "closeDate": "2023-05-29T12:04:26.517Z",
  "code": "string",
  "comment": "string",
  "currencies": "string",
  "expenseAccountForServicePurchase": "string",
  "itemGroup": "string",
  "name": "string",
  "oA_AccountsID": 0,
  "oA_CurrenciesID": 0,
  "oA_ItemGroupID": 0,
  "oA_StockUnitsID": 0,
  "salePrice": 0,
  "unit": "string",
  "vatType": 0
}
```

Field description

[Token] and [OA_ItemsID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [Login] response value

"oA_ItemsID":

"closeDate":

"code":

"comment":

"currencies": Sets sale price currency. See [CurrenciesList] method (use [Currency] value). Can be omitted if [OA_CurrenciesID] property specified

"expenseAccountForServicePurchase": Expense account for service purchase. See [AccountsList] method (use [Account] value). Can be omitted if [OA_AccountsID] property specified

"itemGroup": See [ItemGroupsList] method (use [Name] value). Can be omitted if [OA_ItemGroupID] property specified

"name": Name of service

"oA_AccountsID": Expense account for service purchase. See [AccountsList] method (use [OA_AccountsID] value). Can be omitted if [RegisterParentAccount] property specified

"oA_CurrenciesID": Sets sale price currency. See [CurrenciesList] method (use [OA_CurrenciesID] value). Can be omitted if [Currencies] property specified

"oA_ItemGroupID": See [ItemGroupsList] method (use [OA_ItemGroupID] value). Can be omitted if [ItemGroup] property specified

"oA_StockUnitsID": Register minimum unit. See [StockUnitsList] method (use [OA_StockUnitsID] value). Can be omitted if [Unit] property specified

"salePrice":

"unit": Register minimum unit. See [StockUnitsList] method (use [Unit] value). Can be omitted if [OA_StockUnitsID] property specified

"vatType": Standard = 0, ZeroRate = 1, Untaxed = 2

Examples

1. Update Tax Sservice information using "oA_ItemsID" – 4005
Add item group by "oA_ItemGroupID"– 3 Service Group
Change vat type to zero rate - 1

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ItemsID": 4005,
  "oA_ItemGroupID": 3,
  "vatType": 1
}
```

Server response Code(200):

```
{
  "id": 4005,
  "idFieldName": "OA_ItemsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51190,
    "description": "Property not found!",
    "comment": "OA_ItemsID=4005 Code=5000005\n[OA_ItemGroupID]=3",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Service",
    "entryPoint": "set property",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/Service

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_ItemsID": 0
}
```

Field description

[Token] and [OA_ItemsID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_ItemsID":

Examples

1. Delete service using "oA_ItemsID" - 4005
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ItemsID": 4005
}
```

Server response Code(200):

```
{
  "id": 4005,
  "idFieldName": "OA_ItemsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51250,
    "description": "Can't delete item. A link(s) has been found!",
    "comment": "ID [4005] Code [5000005] Name [Tax Service]\n\n\nAccept operation ID [12],[3],[5026]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Service",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

ServicesList

POST/api/ServicesList

Gets Services. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get lis of all services for further use in the filter

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
```

```

{
  "OA_ItemsID": 3008,
  "Code": "3000003",
  "Name": " Service ",
  "OA_StockUnitsID": 3,

  "Group": "Service Group",
  "OA_CurrenciesID": 1,
  "Currency": "GEL",
  "VAT type": 1
}
]
}

```

2. Get first 2 servises from database

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}

```

3. Get lis of all services and sort by name

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "sort": "[Name]"
}

```

StockUnit

POST/api/StockUnit

Adds stock unit. Returns ID value or Error descriprion Json.

Schema

```

{
  "token": "string",
  "unit": "string",
  "comment": "string"
}

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"unit":

"comment":

Examples

1. Add new stock unit – “Gallon”
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "unit": "Gallon"  
}
```

Server response Code(200):

```
{  
  "id": 2004,  
  "idFieldName": "OA_StockUnitsID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51133,  
    "description": "Unit already exists!",  
    "comment": "Unit [Gallon]nOA_StockUnitsID [2004]",  
    "command": "",  
    "errorType": "ErrorType_Error",  
    "source": "OA_BusinessObject.dll",

    "resourceDLL_ForTranslation": "ORIS_Accounting",  
    "errorPointer": 0  
  }  
]
```

PUT/api/StockUnit

Updates stock unit. Returns OK or Error description Json.

Schema

```
{  
  "token": "string",  
  "oA_StockUnitsID": 0,  
  "unit": "string",  
  "comment": "string"  
}
```

Field description

[Token] and [OA_StockUnitsID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_StockUnitsID": See [StockUnitsList] method (use [OA_StockUnitsID] value)

"unit":

"comment":

Examples

1. Update stock unit name using "oA_StockUnitsID" - 2004
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_StockUnitsID": 2004,  
  "unit": "Gallons"  
}
```

Server response Code(200):

```
{
```

```
"id": 2004,
"idFieldName": "OA_StockUnitsID"
}
```

Server response Code(400):

```
[
{
  "errorNumber": 51051,
  "description": "Record does not exist or read prohibited for user!",
  "comment": "OA_StockUnitsID = 2004",

```

StockUnitsList

POST/api/StockUnitsList

Gets Stock Units. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first 2 units from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_StockUnitsID": 1,
      "Unit": "Piece",
      "Comment": ""
    },
    {
      "OA_StockUnitsID": 2,
      "Unit": "Box",
      "Comment": ""
    }
  ]
}
```

2. Get all field names for further use in the filter

Request body:

```
{
```

```
"token": "... paste here [LogIn] response value ...",
"topRecordsCount": 0
}
```

3. Get a list of units sort by name
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "sort": "[Unit]"
}
```

4. Get one unit Gallons using filter

```
Request body:
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Unit] IN (N'Gallons)"
}
```

Currency

POST/api/Currency

Adds currency. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "currency_": "string",
  "name": "string",
  "imageString": "string"
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"currency_":

"name":

"imageString":

Examples

1. Add new currency Canadian dollar – “CAD”

```
Request body:
{
  "token": "... paste here [LogIn] response value ...",
  "currency_": "CAD",
  "name": "Canadian dollar"
}
```

Server response Code(200):

```
{
  "id": 6,
  "idFieldName": "OA_CurrenciesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51129,
    "description": "Currency already exists!",
    "comment": "Currency [CAD]\nName [Canadian Dollar]\nOA_CurrenciesID [6]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
  }
]
```

```

    "class": "Currency",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]

```

PUT/api/Currency

Updates currency. Returns OK or Error description Json.

Schema

```

{
  "token": "string",
  "oA_CurrenciesID": 0,
  "currency_": "string",
  "name": "string",
  "imageString": "string"
}

```

Field description

[Token] and [OA_CurrenciesID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value)

"currency_":

"name":

"imageString":

Examples

1. Update currency name using "oA_CurrenciesID" - 6

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "oA_CurrenciesID": 6,
  "name": "Canadian Dollar"
}

```

Server response Code(200):

```

{
  "id": 6,
  "idFieldName": "OA_CurrenciesID"
}

```

Server response Code(400):

```

[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_CurrenciesID = 6",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Currency",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]

```

DELETE/api/Currency

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CurrenciesID": 0
}
```

Field description

[Token] and [OA_CurrenciesID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_CurrenciesID":

Examples

1. Delete currency using "oA_CurrenciesID" - 6
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CurrenciesID": 6
}
```

Server response Code(200):

```
{
  "id": 6,
  "idFieldName": "OA_CurrenciesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51109,
    "description": "ORIS_Tools internal error!",
    "comment": "OA_CurrenciesID=6 [CAD]\nExist relation to another table.\n\nRelated table [OA_Entries].\n\n\n[547]
The DELETE statement conflicted with the REFERENCE constraint \"FK_OA_Entries_OA_Currencies\". The conflict
occurred in database \"NDatabaseEN\", table \"dbo.OA_Entries\", column 'OA_CurrenciesID'.[3621] The statement
has been terminated.",
    "command": "",

    "source": "OA_BusinessObject.dll",
    "class": "Currency",
    "entryPoint": "RealDelete",
    "resourceDLL_ForTranslation": "ORIS_Administrate",
    "errorPointer": 0
  }
]
```

CurrenciesList

POST/api/CurrenciesList

Gets Currencies. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value
 "topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0
 "filter": Use SQL WHERE string by field names. Get field names by launch this method with property:
 [TopRecordsCount]=1
 "sort": Use SQL WHERE string by field names. Get field names by launch this method with property:
 [TopRecordsCount]=1
 "pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first currency from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 0,
      "PageRowCount": 1,
      "PageNumber": 0
    }
  ],
  "Result": [
    {

}
```

3. Get all currencies and sort by name

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "sort": "[Currency]"
}
```

CurrencyRate

POST/api/CurrencyRate

Adds currency rate. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "oA_RatesID": 0,
  "oA_CurrenciesID": 0,
  "numberOfUnits": 0,
  "numberOfUnits2": 0,
  "rate": 0,
  "rate2": 0,
  "rateBuy": 0,
  "rateSale": 0,
  "rateDate": "2023-05-30T10:43:47.004Z"
}
```

Field description

[Token] and [OA_RatesID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_RatesID": See [CurrencyRatesList] method (use [OA_RatesID] value)

"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value)

"numberOfUnits":

"numberOfUnits2":

"rate":

"rate2":

"rateBuy":

"rateSale":

"rateDate":

Examples

1. Add currency rate "1 GEL=1.9 CAD" and set on date 31.12.2023, using "oA_CurrenciesID" - 6
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_RatesID": 1,
  "oA_CurrenciesID": 6,
  "numberOfUnits": 1,
  "rate": 1.9,
  "rateDate": "2023-12-31"
}
```

Server response Code(200):

```
{
  "id": 5175,
  "idFieldName": "OA_RatesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51109,
    "description": "ORIS_Tools internal error!",

The duplicate key value is (Dec 31 2023 12:00AM, 6).[3621] The statement has been terminated.",
    "command": "",
    "errorType": "ErrorType_Error",
  }
]
```

```

"source": "OA_BusinessObject.dll",
"class": "CurrencyRates",
"entryPoint": "Update",
"resourceDLL_ForTranslation": "ORIS_Administrate",
"errorPointer": 0
}
]

```

2. Add currency rate "1 GEL=2.0 CAD" and set on current date, using oA_CurrenciesID – 6, specify Buy rate – 1 and Sale rate - 2

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"oA_RatesID": 1,
"oA_CurrenciesID": 6,
"numberOfUnits": 1,
"rate": 2,
"rateBuy": 1,
"rateSale":2
}

```

PUT/api/CurrencyRate

Updates currency rate. Returns OK or Error description Json.

Schema

```

{
"token": "string",
"oA_RatesID": 0,
"oA_CurrenciesID": 0,
"numberOfUnits": 0,
"numberOfUnits2": 0,
"rate": 0,
"rate2": 0,
"rateBuy": 0,
"rateSale": 0,
"rateDate": "2023-05-30T11:11:24.702Z"
}

```

Field description

[Token] and [OA_RatesID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_RatesID": See [CurrencyRatesList] method (use [OA_RatesID] value)

"oA_CurrenciesID": See [CurrenciesList] method (use [OA_CurrenciesID] value)

"numberOfUnits":

"numberOfUnits2":

"rate":

"rate2":

"rateBuy":

"rateSale":

"rateDate":

Examples

1. Update currency rate, add second rate "1USD=1.36 CAD" using "oA_CurrenciesID" – 6 and "oA_RatesID" - 5175

Request body:

```

{
"token": "... paste here [LogIn] response value ...",
"oA_RatesID": 5175,
"oA_CurrenciesID": 6,
"numberOfUnits2": 1,
"rate2":1.36,

```

```
"rateDate": "2023-12-31"
}
```

Server response Code(200):

```
{
  "id": 5175,
  "idFieldName": "OA_RatesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",

    "class": "CurrencyRates",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/CurrencyRate

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_RatesID": 0
}
```

Field description

[Token] and [OA_RatesID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_RatesID":

Examples

1. Delete currency rate using RatesID - 5175

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_RatesID": 5175
}
```

Server response Code(200):

```
{
  "id": 5175,
  "idFieldName": "OA_RatesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_RatesID = 5175",

    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
  }
]
```

```

    "class": "CurrencyRates",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]

```

CurrencyRatesList

POST/api/CurrencyRatesList

Gets Currency rates. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "diapazonStartDate": "2023-05-30T12:41:49.741Z",
  "diapazonEndDate": "2023-05-30T12:41:49.741Z",
  "currenciesIDs": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string"
}

```

Field description

"**token**": Set [token] string from [LogIn] response value

"**diapazonStartDate**": Diapazon start date

"**diapazonEndDate**": Diapazon end date (to). Example: Period of 2010 year specify - "DiapazonStartDate":"2010-01-01",

"**DiapazonEndDate**":"2011-01-01"

"**currenciesIDs**":

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**":

"**sort**":

Examples

1. Get first 2 accounts from database

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}

```

Server response Code(200):

```

{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [

"**zip**":

Examples

1. Update cost centre Store using "oA_CostCentreID" - 2004 "Store", change name to 'Store N1', add cost centre group – Service, using costCentreGroupID – 1

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CostCentreID": 2004,
  "costCentreGroupID": 1,
  "costCentreName": "Store N1"
}
```

Server response Code(200):

```
{
  "id": 2004,
  "idFieldName": "OA_CostCentreID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51109,
    "description": "ORIS_Tools internal error!",
    "comment": "OA_CostCentreID=2004 [Store N1]\nExist relation to another table.\n\nRelated table [OA_CostCentre].\n\n[547] The UPDATE statement conflicted with the FOREIGN KEY constraint \"FK_OA_CostCentre_OA_CostCentreGroup\". The conflict occurred in database \"NDatabaseEN\", table \"dbo.OA_CostCentreGroup\", column 'OA_CostCentreGroupID'.[3621] The statement has been terminated.",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "CostCentre",
    "entryPoint": "Update",
    "resourceDLL_ForTranslation": "ORIS_Administrate",
    "errorPointer": 0
  }
]
```

DELETE/api/CostCentre

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CostCentreID": 0
}
```

Field description

[Token] and [OA_CostCentreID] is necessary.

```
"token": "... paste here [LogIn] response value ...",
"oA_CostCentreID":
```

Examples

1. Delete cost centre 'Service cost centre' using "oA_CostCentreID" - 2003

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CostCentreID": 2003
}
```

Server response Code(200):

```
{
  "id": 2003,
  "idFieldName": "OA_CostCentreID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51015,
    "description": "Can't delete record!",
    "comment": "[Service cost center] Cost Centre has sub CostCentre(s).\nFirst delete sub CostCentre(s).",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "CostCentre",
    "entryPoint": "CheckSubAccountExistance",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

CostCentresList

POST/api/CostCentresList

Gets Cost Centres. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get list of all cost centre by level 1

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Level]=1"
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_CostCentreID": 2004,
      "Name": "Store N1",
      "Comment": "",
      "ParentID": 2003,
      "Level": 1,

```

```

    "Leaf": true,
    "Parent Cost Centre": "Service cost center",
    "OA_CostCentreGroupID": 1,
    "Cost centre group": "Service",
    "Address": "Al. Kazbegi Ave. 12-b",
    "OA_CityID": 1,
    "City": "Tbilisi",
    "Zip": "0160"
  }
}
}

```

2. Get list of all cost centre names for further use in the filter

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}

```

CostUnit

POST/api/CostUnit

Adds cost unit. Returns ID value or Error description Json.

Schema

```

{
  "token": "string",
  "comment": "string",
  "name": "string",
  "parentID": 0
}

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"comment":

"name":

"parentID": See [CostUnitsList] method (use [OA_CostUnitID] value)

Examples

1. Add "New Cost Unit"

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "name": " New Cost Unit "
}

```

Server response Code(200):

```

{
  "id": 1003,
  "idFieldName": "OA_CostUnitID"
}

```

Server response Code(400):

```

[
  {
    "errorNumber": 51132,
    "description": "Cost unit already exists!",
    "comment": "Name [ New Cost Unit ]\nOA_CostUnitID [1003]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
  }
]

```

```

    "class": "CostUnit",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]

```

PUT/api/CostUnit

Updates cost unit. Returns OK or Error description Json.

Schema

```

{
  "token": "string",
  "oA_CostUnitID": 0,
  "comment": "string",
  "name": "string",
  "parentID": 0
}

```

Field description

[Token] and [OA_CostUnitID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_CostUnitID": See [CostUnitsList] method (use [OA_CostUnitID] value)

"comment":

"name":

"parentID": See [CostUnitsList] method (use [OA_CostUnitID] value)

Examples

1. Update cost unit "oA_CostUnitID" – 1003, add parent "Total cost unit" using "oA_CostUnitID" - 1
Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "oA_CostUnitID": 1003,
  "parentID": 1
}

```

Server response Code(200):

```

{
  "id": 1003,
  "idFieldName": "OA_CostUnitID"
}

```

DELETE/api/CostUnit

Returns OK or Error description Json.

Schema

```

{
  "token": "string",
  "oA_CostUnitID": 0
}

```

Field description

[Token] and [OA_CostUnitID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_CostUnitID":

Examples

1. Delete cost unit using oA_CostUnitID – 1003 “New Cost Unit”

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CostUnitID": 1003
}
```

Server response Code(200):

```
{
  "id": 1003,
  "idFieldName": "OA_CostUnitID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51109,
    "description": "ORIS_Tools internal error!",
    "comment": "Exist relation to another table.\r\nRelated table [OA_Entries].\r\n\r\n[547] The DELETE statement conflicted with the REFERENCE constraint \"FK_OA_Entries_OA_CostUnit\". The conflict occurred in database \"NDatabaseEN\", table \"dbo.OA_Entries\", column 'OA_CostUnitID'.[3621] The statement has been terminated.",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "CostUnit",
    "entryPoint": "RealDelete",
    "resourceDLL_ForTranslation": "ORIS_Administrate",
    "errorPointer": 0
  }
]
```

CostUnitsList

POST/api/CostUnitsList

Gets Cost Units. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first cost unit from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1
}
```

Server response Code(200):

```
{
  "Info": [
    {
```

```

    "RowCount": 1,
    "PageCount": 0,
    "PageRowCount": 1,
    "PageNumber": 0
  }
],
"Result": [
  {
    "OA_CostUnitID": 1,
    "Name": "Total cost unit",
    "ParentID": 0,
    "Level": 0,
    "Leaf": false,
    "Comment": "",
    "Parent Cost Unit": null
  }
]
}

```

2. Get list of all cpst units for further use in the filter

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1
}

```

3. Getlist of cost units by level – 1

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Level]=1"
}

```

Comment

POST/api/Comment

Adds comment. Returns ID value or Error description Json.

Schema

```

{
  "token": "string",
  "commentText": "string"
}

```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"commentText":

Examples

1. Add coment 'Service expense'

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "commentText": "Service expense"
}

```

Server response Code(200):

```

{
  "id": 2,
  "idFieldName": "OA_CommentsID"
}

```

PUT/api/Comment

Updates comment. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CommentsID": 0,
  "commentText": "string"
}
```

Field description

[Token] and [OA_CommentsID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_CommentsID": See [CommentsList] method (use [OA_CommentsID] value)

"commentText":

Examples

1. Update comment using OA_CommentsID – 2 to "Service expenses"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CommentsID": 2,
  "commentText": "Service expenses"
}
```

Server response Code(200):

```
{
  "id": 2,
  "idFieldName": "OA_CommentsID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_CommentsID = 2",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Comments",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/Comment

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CommentsID": 0
}
```

Field description

[Token] and [OA_CommentsID] is necessary.

"token": Set [token] string from [LogIn] response value
"oA_CommentsID":

Examples

1. Delete comment "Service expenses" using oA_CommentID - 2
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_CommentsID": 2  
}
```

Server response Code(200):

```
{  
  "id": 2,  
  "idFieldName": "OA_CommentsID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51051,  
    "description": "Record does not exist or read prohibited for user!",  
    "comment": "OA_CommentsID = 2",  
    "command": "",  
    "errorType": "ErrorType_Error",  
    "source": "OA_BusinessObject.dll",  
    "class": "Comments",  
    "entryPoint": "GetProperties",  
    "resourceDLL_ForTranslation": "ORIS_Accounting",  
    "errorPointer": 0  
  }  
]
```

CommentsList

POST/api/CommentsList

Gets Comments. Returns [Info] and [Result] tables.

Schema

```
{  
  "token": "string",  
  "topRecordsCount": 0,  
  "filter": "string",  
  "sort": "string",  
  "pageNumber": 0  
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get list of all comments for further use in the filter
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
}
```

```
"topRecordsCount": 0
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_CommentsID": 2,
      "Comment": "Service expenses",
      "OA_UsersID": 1
    }
  ]
}
```

2. Get first 2 accounts from database

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

3. Get the 2nd page from the entire list of accounts, 15 records per page and sort by Comment

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 15,
  "sort": "[Comment]",
  "pageNumber": 2
}
```

TransactionType

POST/api/TransactionType

Adds transaction type. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "comment": "string",
  "containsManagerialInformation": true,
  "guid": "string",
  "name": "string"
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"comment":

"containsManagerialInformation":

"guid":

"name":

Examples

1. Add new transaction type "Credit Transactions"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "name": "Credit Transactions"
}
```

Server response Code(200):

```
{
  "id": 51,
  "idFieldName": "OA_TransactionTypesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51260,
    "description": "Transaction type name already exists!",
    "comment": "Name [Credit Transactions]nOA_TransactionTypesID [51]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "TransactionTypes",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/TransactionType

Updates transaction type. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionTypesID": 0,
  "comment": "string",
  "containsManagerialInformation": true,
  "guid": "string",
  "name": "string"
}
```

Field description

[Token] and [OA_TransactionTypesID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_TransactionTypesID": See [TransactionTypesList] method (use [OA_TransactionTypesID] value)

"comment":

"containsManagerialInformation":

"guid":

"name":

Examples

1. Update transaction type "Credit Transactions" using oA_TransactionTypesID - 51

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionTypesID": 51,
  "containsManagerialInformation": true
}
```

Server response Code(200):

```
}
```

```
"id": 51,
"idFieldName": "OA_TransactionTypesID"
}
```

Server response Code(400):

```
[
{
  "errorNumber": 51051,
  "description": "Record does not exist or read prohibited for user!",
  "comment": "OA_TransactionTypesID = 501",
  "command": "",
  "errorType": "ErrorType_Error",
  "source": "OA_BusinessObject.dll",
  "class": "TransactionTypes",
  "entryPoint": "GetProperties",
  "resourceDLL_ForTranslation": "ORIS_Accounting",
  "errorPointer": 0
}
]
```

TransactionTypesList

POST/api/TransactionTypesList

Gets Transaction Types. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get second transaction types from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "pageNumber": 2
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 52,
      "PageCount": 52,
      "PageRowCount": 1,
      "PageNumber": 2
    }
  ],
  "Result": [
```

```
{
  "OA_TransactionTypesID": 2,
  "Name": "Bank transfer (foreign currency)",
  "GUID": "229D16CA-96C9-4AB2-8BE9-C61FA8B724E6",
  "Comment": "",
  "Image":

  "Contains manager information": true,
  "NUM_ROW": 2
}
]
```

2. Get all field names for further use in the filter

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}
```

3. Get list of transaction types which is marked Contains manager information

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0,
  "filter": "[Contains manager information]<>0"
}
```

TransactionLink

PUT/api/TransactionLink

Adds, Updates or Deletes transaction link. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_TransactionsID": 0,
  "relatedTransactions": [
    {
      "oA_TransactionsID": 0
    }
  ]
}
```

Field description

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

"relatedTransactions":

"oA_TransactionsID":

Examples

1. Add transaction link "oA_TransactionsID" - 32 : Revenue income using debtor/creditor account "1410 1", income account for supply "6110 1" and payable VAT account "3330" and payment (cash income) using cash account "1110 2" and debtor/creditor account "1410 1"
To "oA_TransactionsID" – 5050 : Supply the googs using debtor/creditor account "1410 1" and item account "1610 1"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_TransactionsID": 32,
```

```
"relatedTransactions": [  
  {  
    "oA_TransactionsID": 5050  
  }  
]
```

Server response Code(200):

```
{  
  "id": 32,  
  "idFieldName": "OA_TransactionLinksID"  
}
```

2. Update transaction link for "oA_TransactionsID – 32" , Change related transaction To "oA_TransactionsID" – 5057

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_TransactionsID": 32,  
  "relatedTransactions": [  
    {  
      "oA_TransactionsID": 5057  
    }  
  ]  
}
```

3. Update transaction link for "oA_TransactionsID – 32" , Add two transaction links "oA_TransactionsID" – 5057 and "oA_TransactionsID" – 5050

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_TransactionsID": 32,  
  "relatedTransactions": [  
    {  
      "oA_TransactionsID": 5057  
    },  
    {  
      "oA_TransactionsID": 5050  
    }  
  ]  
}
```

4. Delete related transaction "oA_TransactionsID" – 5050, using "oA_TransactionsID" - 32 and related transaction "oA_TransactionsID" – 5057

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_TransactionsID": 32,  
  "relatedTransactions": [  
    {  
      "oA_TransactionsID": 5057  
    }  
  ]  
}
```

GetTransactionLinkByID

POST/api/GetTrnckByID

Gets Transaction Links by OA_TransactionsID value.

Schema

```
{  
  "token": "string",  
  "oA_TransactionsID": 0,  
}
```

```
"relatedTransactions": [  
  {  
    "oA_TransactionsID": 0  
  }  
]
```

Field description

"token": Set [token] string from [LogIn] response value

"oA_TransactionsID":

"relatedTransactions":

"oA_TransactionsID":

Examples

1. Get list of related transactions for oA_TransactionsID - 32

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_TransactionsID": 32  
}
```

Server response Code(200):

```
{  
  "oA_TransactionsID": 32,  
  "relatedTransactions": [  
    {  
      "oA_TransactionsID": 5057  
    }  
  ]  
}
```

Manufacturer

POST/api/Manufacturer

Adds manufacturer. Returns ID value or Error description Json.

Schema

```
{  
  "token": "string",  
  "name": "string"  
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"name":

Examples

1. Add manufacturer "Oris"

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "name": "Oris"  
}
```

Server response Code(200):

```
{  
  "id": 1,  
  "idFieldName": "OA_ManufacturersID"  
}
```

Server response Code(400):

  }
]
```

PUT/api/Manufacturer

Updates manufacturer. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_ManufacturersID": 0,
  "name": "string"
}
```

Field description

[Token] and [OA_ManufacturersID] is necessary. Specify only those fields that you want to change.

"**token**": Set [token] string from [LogIn] response value

"**oA_ManufacturersID**": See [ManufacturersList] method (use [OA_ManufacturersID] value)

"**name**":

Examples

1. Update information about manufacturer using oA_ManufacturersID – 1, change name to "LTD Oris"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ManufacturersID": 1,
  "name": "LTD Oris"
}
```

Server response Code(200):

```
{
  "id": 1,
  "idFieldName": "OA_ManufacturersID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_ManufacturersID = 1",
    "command": "",

    "source": "OA_BusinessObject.dll",
    "class": "Manufacturers",
    "entryPoint": "GetProperties",
  }
]
```

```
"resourceDLL_ForTranslation": "ORIS_Accounting",
"errorPointer": 0
}
]
```

DELETE/api/Manufacturer

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_ManufacturersID": 0
}
```

Field description

[Token] and [OA_ManufacturersID] is necessary.

"**token**": Set [token] string from [LogIn] response value

"**oA_ManufacturersID**":

Examples

1. Delete manufacturer using oA_ManufacturersID - 1
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_ManufacturersID": 1
}
```

Server response Code(200):

```
{
  "id": 1,
  "idFieldName": "OA_ManufacturersID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",

    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Manufacturers",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

ManufacturersList

POST/api/ManufacturersList

Gets Manufacturers. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
}
```

```
"sort": "string",
"pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first name of manufacturer from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 0,
      "PageRowCount": 1,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_ManufacturersID": 1,
      "Name": "LTD Oris"
    }
  ]
}
```

2. Get the 2nd from the entire list of accounts

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "pageNumber": 2
}
```

3. Get all field names for further use in the filter

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}
```

4. Get one manufacturer using filter

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Name] IN (N'LTD Oris)"
}
```

City

POST/api/City

Adds city. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "name": "string",
  "oA_CountryID": 0,
  "countryName": "string"
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"name":

"oA_CountryID": See [CostUnitsList] method (use [OA_CountryID] value). Can be omitted if [CountryName] property specified

"countryName": See [CostUnitsList] method (use [Name] value). Can be omitted if [OA_CountryID] property specified

Examples

1. Add city name – "Tbilisi"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "name": "Tbilisi"
}
```

Server response Code(200):

```
{
  "id": 63,
  "idFieldName": "OA_CityID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51243,
    "description": "City already exists!",
    "comment": "Name [Tbilisi1]\nOA_CityID [63]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "City",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/City

Updates city. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CityID": 0,
  "name": "string",
  "oA_CountryID": 0,
  "countryName": "string"
}
```

Field description

[Token] and [OA_CityID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_CityID": See [CitiesList] method (use [OA_CityID] value)

"name":

"oA_CountryID": See [CostUnitsList] method (use [OA_CountryID] value). Can be omitted if [CountryName] property specified

"countryName": See [CostUnitsList] method (use [Name] value). Can be omitted if [OA_CountryID] property specified

Examples

1. Update city by oA_CityID – 63 "Tbilisi",. Add country using "oA_CountryID – 82 "Georgia"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CityID": 63,
  "oA_CountryID": 82
}
```

Server response Code(200):

```
{
  "id": 63,
  "idFieldName": "OA_CityID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_CityID = 63",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "City",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/City

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CityID": 0
}
```

Field description

[Token] and [OA_CityID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_CityID":

Examples

1. Delete city "Tbilisi" using oA_CityID- 63

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CityID": 63
}
```

```
}
```

Server response Code(200):

```
{  
  "id": 63,  
  "idFieldName": "OA_CityID"  
}
```

Server response Code(400):

```
[  
  {

    "entryPoint": "RealDelete",  
    "resourceDLL_ForTranslation": "ORIS_Administrate",  
    "errorPointer": 0  
  }  
]
```

CitiesList

POST/api/CitiesList

Gets Cities. Returns [Info] and [Result] tables.

Schema

```
{  
  "token": "string",  
  "topRecordsCount": 0,  
  "filter": "string",  
  "sort": "string",  
  "pageNumber": 0  
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first 2 city names from list

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "topRecordsCount": 2  
}
```

Server response Code(200):

```
{  
  "Info": [  
    {  
      "RowCount": 2,  

```

```

    "PageCount": 0,
    "PageRowCount": 2,
    "PageNumber": 0
  }
],
"Result": [
  {
    "OA_CityID": 1,
    "Name": "Tbilisi",
    "OA_CountryID": 82,
    "Country": "Georgia"
  },
  {
    "OA_CityID": 2,
    "Name": "Batumi",
    "OA_CountryID": 82,
    "Country": "Georgia"
  }
]
}

```

2. Get the 2nd page from the entire list of cities, 15 records per page

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 15,
  "pageNumber": 2
}

```

3. Get all field names for further use in the filter

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}

```

4. Get a list of cities whose country is Georgia and sort by name

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Country] IN (N'Georgia')",
  "sort": "[Name]"
}

```

Country

POST/api/Country

Adds country. Returns ID value or Error description Json.

Schema

```

{
  "token": "string",
  "countryCode": "string",
  "name": "string",
  "numericCode": "string"
}

```

Field description

[Token] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"countryCode":

"name":

"numericCode":

Examples

1. Add new country "Georgia", specify code GE

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "countryCode": "GE",
  "name": "Georgia"
}
```

Server response Code(200):

```
{
  "id": 250,
  "idFieldName": "OA_CountryID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51133,
    "description": "Unit already exists!",
    "comment": "Name [Georgia]\nOA_CountryID [250]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Country",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/Country

Updates country. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CountryID": 0,
  "countryCode": "string",
  "name": "string",
  "numericCode": "string"
}
```

Field description

[Token] and [OA_CountryID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_CountryID": See [CountriesList] method (use [OA_CountryID] value)

"countryCode":

"name":

"numericCode":

Examples

1. Update country "Georgia" using "oA_CountryID" – 250, add numeric code "268"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CountryID": 250,
  "numericCode": "268"
}
```

Server response Code(200):

```
{
  "id": 250,
  "idFieldName": "OA_CountryID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_CountryID = 250",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Country",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/Country

Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_CountryID": 0
}
```

Field description

[Token] and [OA_CountryID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_CountryID":

Examples

1. Delete country "Geprgia" using "oA_CountryID" - 250

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_CountryID": 250
}
```

Server response Code(200):

```
{
  "id": 250,
  "idFieldName": "OA_CountryID"
}
```

Server response Code(400):

    "class": "Country",
    "entryPoint": "RealDelete",
    "resourceDLL_ForTranslation": "ORIS_Administrate",
    "errorPointer": 0
  }
]

```

CountriesList

POST/api/CountriesList

Gets Countries. Returns [Info] and [Result] tables.

Schema

```

{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}

```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get first 2 country names from list

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}

```

Server response Code(200):

```

{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 2,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_CountryID": 2,
      "Name": "Aland Islands",
      "Country code": "AX",
      "Numeric code": "248"
    },
    {
      "OA_CountryID": 3,
      "Name": "Albania",
      "Country code": "AL",
      "Numeric code": "8"
    }
  ]
}

```

2. Get the 2nd page from the entire list of countries, 15 records per page

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 15,
  "pageNumber": 2
}
```

3. Get all field names for further use in the filter

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}
```

4. Get a list of countries whose name starts with G and sort by name decreasing

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Name] LIKE N'G'",
  "sort": "[Name] DESC"
}
```

Bank

POST/api/Bank

Adds new bank. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "code": "string",
  "name": "string"
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"code":

"name":

Examples

1. Add new bank "National Bank Of Georgia"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "name": "National Bank Of Georgia"
}
```

Server response Code(200):

```
{
  "id": 23,
  "idFieldName": "OA_BanksID"
}
```

Server response Code(400):

```
[

"class": "Banks",
"entryPoint": "DBUpdateAction",
"resourceDLL_ForTranslation": "ORIS_Administrate",
"errorPointer": 0
}
]

```

PUT/api/Bank

Updates bank. Returns OK or Error description Json.

Schema

```

{
  "token": "string",
  "oA_BanksID": 0,
  "code": "string",
  "name": "string"
}

```

Field description

[Token] and [OA_BanksID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_BanksID": See [BanksList] method (use [OA_BanksID] value)

"code":

"name":

Examples

1. Update Bank code to "BNLNGE22" using "oA_BanksID – 23 “National Bank Of Georgia”

Request body:

```

{
  "token": "... paste here [LogIn] response value ...",
  "oA_BanksID": 23,
  "code": "BNLNGE22"
}

```

Server response Code(200):

```

{
  "id": 23,
  "idFieldName": "OA_BanksID"
}

```

Server response Code(400):

```

[
  {

  }
]
```

BanksList

POST/api/BanksList

Gets Banks. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

```
}
```

Field description

"**token**": Set [token] string from [LogIn] response value

"**topRecordsCount**": The number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"**sort**": Use SQL ORDER BY string with field names

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get the 8th bank from the entire list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "pageNumber": 8
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 22,
      "PageCount": 22,
      "PageRowCount": 1,
      "PageNumber": 8
    }
  ],
  "Result": [
    {
      "OA_BanksID": 8,
      "Code": "TBCBGE22",
      "Name": "TBC Bank",
      "NUM_ROW": 8
    }
  ]
}
```

2. Get first 2 bank names from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

3. Get all field names for further use in the filter

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}
```

4. Get a list of banks and sort by name decreasing

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0,
  "sort": "[Name] DESC"
}
```

5. Get one bank - National Bank Of Georgia, filter by name

```
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Name] IN (N'National Bank Of Georgia')"
```

Vehicle

POST/api/Vehicle

Adds vehicle. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "number": "string",
  "mark": "string",
  "trailer": "string",
  "comment": "string"
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"number":

"mark":

"trailer":

"comment":

Examples

1. Add vehicle "Vehicle mark"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "number": "123456",
  "mark": "Vehicle mark"
}
```

Server response Code(200):

```
{
  "id": 1,
  "idFieldName": "OA_VehiclesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51109,
    "description": "ORIS_Tools internal error!",
    "comment": "OA_VehiclesID=2\nA duplicate value cannot be inserted.\r\n[Number] = [123456]\r\n\r\n[2601] Cannot insert duplicate key row in object 'dbo.OA_Vehicles' with unique index 'IndxOA_Vehicles1'. The duplicate key value is (123456).[3621] The statement has been terminated.",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Vehicles",
    "entryPoint": "Update",
    "resourceDLL_ForTranslation": "ORIS_Administrate",
    "errorPointer": 0
  }
]
```

PUT/api/Vehicle

Adds vehicle. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_VehiclesID": 0,
  "number": "string",
  "mark": "string",
  "trailer": "string",
  "comment": "string"
}
```

Field description

[Token] and [OA_VehiclesID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_VehiclesID": See [VehiclesList] method (use [OA_VehiclesID] value)

"number":

"mark":

"trailer":

"comment":

Examples

1. Update vehicle number to "123-321" using oA_VehicleID – 1
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_VehiclesID": 11,
  "number": "123-321"
}
```

Server response Code(200):

```
{
  "id": 1,
  "idFieldName": "OA_VehiclesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_VehiclesID = 1",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Vehicles",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

DELETE/api/Vehicle

Returns OK or Error description Json

Schema

```
{
  "token": "string",
  "oA_VehiclesID": 0
}
```

Field description

[Token] and [OA_VehiclesID] is necessary.

"**token**": Set [token] string from [LogIn] response value
"oA_VehiclesID":

Examples

1. Delete vehicle using "oA_VehiclesID" - 1
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_VehiclesID": 1  
}
```

Server response Code(200):

```
{  
  "id": 1,  
  "idFieldName": "OA_VehiclesID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51051,  
    "description": "Record does not exist or read prohibited for user!",  
    "comment": "OA_VehiclesID = 1",  
    "command": "",  
    "errorType": "ErrorType_Error",  
    "source": "OA_BusinessObject.dll",  
    "class": "Vehicles",  
    "entryPoint": "GetProperties",  
    "resourceDLL_ForTranslation": "ORIS_Accounting",  
    "errorPointer": 0  
  }  
]
```

VehiclesList

POST/api/VehiclesList

Gets . Returns [Info] and [Result] tables.

Schema

```
{  
  "token": "string",  
  "topRecordsCount": 0,  
  "filter": "string",  
  "sort": "string",  
  "pageNumber": 0  
}
```

Field description

"**token**": Set [token] string from [LogIn] response value

"**topRecordsCount**": the number of records to accept. If you specify 0 you will get all records. Default=0

"**filter**": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"**sort**": Use SQL ORDER BY string with field names

"**pageNumber**": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get all field names for further use in the filter
Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "topRecordsCount": 0  
}
```

```
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 1,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_VehiclesID": 1,
      "Number": "123-321",
      "Mark": "Vehicle mark",
      "Trailer": "",
      "Comment": ""
    }
  ]
}
```

2. Get the 2nd vehicle from the entire list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "pageNumber": 2
}
```

3. Get first 2 vehicle names from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

4. Get a list of vehicle and sort by name

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0,
  "sort": "[Mark]"
}
```

5. Get one vehicle filter by name

```
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[Mark] IN (N'Vehicle mark!)"
}
```

SalePriceType

POST/api/SalePriceType

Adds new sale price type. Returns ID value or Error description Json.

Schema

```
{
  "token": "string",
  "description": "string",
  "isClosed": true
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"description":

"isClosed":

Examples

1. Add sale price type – “Cost-plus pricing”

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "description": "Cost-plus pricing",
  "isClosed": false
}
```

Server response Code(200):

```
{
  "id": 1,
  "idFieldName": "OA_SalePriceTypesID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51224,
    "description": "Sale price type already exists!",
    "comment": "Sale price type = [Cost-plus pricing]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "SalePriceTypes",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/SalePriceType

Updates sale price type. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_SalePriceTypesID": 0,
  "description": "string",
  "isClosed": true
}
```

Field description

[Token] and [OA_StatusID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_SalePriceTypesID": See [SalePriceTypesList] method (use [OA_SalePriceTypesID] value)

"description":

"isClosed":

Examples

1. Update sale price type using oA_SalePriceTypesID 1 – mark as closed

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",

```

```
"oA_SalePriceTypesID": 1,  
"isClosed": true  
}
```

Server response Code(200):

```
{  
  "id": 1,  
  "idFieldName": "OA_SalePriceTypesID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51051,  
    "description": "Record does not exist or read prohibited for user!",  
    "comment": "OA_SalePriceTypesID = 1",  
    "command": "",  
    "errorType": "ErrorType_Error",  
    "source": "OA_BusinessObject.dll",  
    "class": "SalePriceTypes",  
    "entryPoint": "GetProperties",  
    "resourceDLL_ForTranslation": "ORIS_Accounting",  
    "errorPointer": 0  
  }  
]
```

DELETE/api/SalePriceType

Returns OK or Error description Json.

Schema

```
{  
  "token": "string",  
  "oA_SalePriceTypesID": 0  
}
```

Field description

[Token] and [OA_StatusID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_SalePriceTypesID":

Examples

1. Delete sale price type using oA_SalePriceTypesID 1

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_SalePriceTypesID": 1  
}
```

Server response Code(200):

```
{  
  "id": 1,  
  "idFieldName": "OA_SalePriceTypesID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51109,  
    "description": "ORIS_Tools internal error!",  
    "comment": "Exist relation to another table.\n\nRelated table [OA_Transactions].\n\n[547] The DELETE statement conflicted with the REFERENCE constraint \"FK_OA_Transactions_OA_SalePriceTypes\". The conflict
```

occurred in database \"NDatabaseEN\", table \"dbo.OA_Transactions\", column 'OA_SalePriceTypesID'.[3621] The statement has been terminated.

```
"command": "",
"errorType": "ErrorType_Error",
"source": "OA_BusinessObject.dll",
"class": "SalePriceTypes",
"entryPoint": "RealDelete",
"resourceDLL_ForTranslation": "ORIS_Administrate",
"errorPointer": 0
}
]
```

SalePriceTypesList

POST/api/SalePriceTypesList

Gets Sale Price Types. Returns [Info] and [Result] tables.

Schema

```
{
  "token": "string",
  "topRecordsCount": 0,
  "filter": "string",
  "sort": "string",
  "pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get all field names for further use in the filter

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 2,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_SalePriceTypesID": 1,
      "Description": "Cost-plus pricing",
      "Is closed": true
    },
    {
      "OA_SalePriceTypesID": 2,
      "Description": "Value pricing",
      "Is closed": false
    }
  ]
}
```

```
]
}
```

2. Get the 2nd sale price type from the entire list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "pageNumber": 2
}
```

3. Get first 2 sale price type names from list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 2
}
```

4. Get a list of sale price type and sort by name

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0,
  "sort": "[Description]"
}
```

5. Get list of sale price type wich isn't markes as close

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "filter": "[ViewOA_SalePriceTypes].[Is closed]=0 "
}
```

Status

POST/api/Status

Adds status. Returns ID value or Error descrption Json.

Schema

```
{
  "token": "string",
  "name": "string"
}
```

Field description

[Token] is necessary. Specify only those fields that you want to fill.

"token": Set [token] string from [LogIn] response value

"name":

Examples

1. Add status name – "Status Active"

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "name": "Status Active"
}
```

Server response Code(200):

```
{
  "id": 5,
  "idFieldName": "OA_StatusID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51133,
    "description": "Unit already exists!",
    "comment": "Name [Status Active]\nOA_StatusID [5]",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Status",
    "entryPoint": "CheckProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

PUT/api/Status

Updates status. Returns OK or Error description Json.

Schema

```
{
  "token": "string",
  "oA_StatusID": 0,
  "name": "string"
}
```

Field description

[Token] and [OA_StatusID] is necessary. Specify only those fields that you want to change.

"token": Set [token] string from [LogIn] response value

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value)

"name":

Examples

1. Update status name to "Active" using oA_StatusID - 5
Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "oA_StatusID": 5,
  "name": "Active"
}
```

Server response Code(200):

```
{
  "id": 5,
  "idFieldName": "OA_StatusID"
}
```

Server response Code(400):

```
[
  {
    "errorNumber": 51051,
    "description": "Record does not exist or read prohibited for user!",
    "comment": "OA_StatusID = 5",
    "command": "",
    "errorType": "ErrorType_Error",
    "source": "OA_BusinessObject.dll",
    "class": "Status",
    "entryPoint": "GetProperties",
    "resourceDLL_ForTranslation": "ORIS_Accounting",
    "errorPointer": 0
  }
]
```

]

DELETE/api/Status

Returns OK or Error description Json

Schema

```
{  
  "token": "string",  
  "oA_StatusID": 0  
}
```

Field description

[Token] and [OA_StatusID] is necessary.

"token": Set [token] string from [LogIn] response value

"oA_StatusID": See [StatusesList] method (use [OA_StatusID] value). Can be omitted if [Status] property specified

Examples

1. Delete status using oA_StatusID – 5

Request body:

```
{  
  "token": "... paste here [LogIn] response value ...",  
  "oA_StatusID": 5  
}
```

Server response Code(200):

```
{  
  "id": 5,  
  "idFieldName": "OA_StatusID"  
}
```

Server response Code(400):

```
[  
  {  
    "errorNumber": 51109,  
    "description": "ORIS_Tools internal error!",  
    "comment": "OA_StatusID=5 [Active]\nExist relation to another table.\n\nRelated table  
[OA_Transactions].\n\n[547] The DELETE statement conflicted with the REFERENCE constraint  
\"FK_OA_Transactions_OA_StatusID\". The conflict occurred in database \"NDatabaseEN\", table  
\"dbo.OA_Transactions\", column 'OA_StatusID'. [3621] The statement has been terminated.",  
    "command": "",  
    "errorType": "ErrorType_Error",  
    "source": "OA_BusinessObject.dll",  
    "class": "Status",  
    "entryPoint": "RealDelete",  
    "resourceDLL_ForTranslation": "ORIS_Administrate",  
    "errorPointer": 0  
  }  
]
```

StatusesList

POST/api/StatusesList

Gets Statuses. Returns [Info] and [Result] tables.

Schema

```
{  
  "token": "string",  
  "topRecordsCount": 0,  
  "filter": "string",  
}
```

```
"sort": "string",
"pageNumber": 0
}
```

Field description

"token": Set [token] string from [LogIn] response value

"topRecordsCount": The number of records to accept. If you specify 0 you will get all records. Default=0

"filter": Use SQL WHERE string by field names. Get field names by launch this method with property:

[TopRecordsCount]=1

"sort": Use SQL ORDER BY string with field names

"pageNumber": Gets records by page number. Specify [TopRecordsCount] as the number of records per page

Examples

1. Get all field names for further use in the filter

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 0
}
```

Server response Code(200):

```
{
  "Info": [
    {
      "RowCount": 5,
      "PageCount": 0,
      "PageRowCount": 0,
      "PageNumber": 0
    }
  ],
  "Result": [
    {
      "OA_StatusID": 5,
      "Name": "Active"
    },
    {
      "OA_StatusID": 3,
      "Name": "Completed"
    },
    {
      "OA_StatusID": 2,
      "Name": "Confirmed"
    },
    {
      "OA_StatusID": 1,
      "Name": "In progress"
    },
    {
      "OA_StatusID": 4,
      "Name": "Rejected"
    }
  ]
}
```

2. Get the 2nd status name from the entire list

Request body:

```
{
  "token": "... paste here [LogIn] response value ...",
  "topRecordsCount": 1,
  "pageNumber": 2
}
```

3. Get first 2 status names from list

Request body:

```
{
```

```
"token": "... paste here [Login] response value ...",
"topRecordsCount": 2
}
```

4. Get a list of status names and sort by name
Request body:

```
{
"token": "... paste here [Login] response value ...",
"topRecordsCount": 0,
"sort": "[Name]"
}
```

5. Get information about status name Active using filter
Request body:

```
{
"token": "... paste here [Login] response value ...",
"filter": "[ViewOA_Status].[Name] IN (N'Active')"
}
```
